Your knowledge range will be broadened and your personal skills will be enhanced by using the GitHub-Advanced-Security free pdf torrent, then you will be brave and confident to face the GitHub-Advanced-Security actual test.

GitHub Advanced Security GHAS Exam Sample Questions (Q73-Q78):

NEW QUESTION # 73
Which alerts do you see in the repository's Security tab? (Each answer presents part of the solution. Choose three.)

- A. Secret scanning alerts
- B. Code scanning alerts
- C. Repository permissions
- D. Security status alerts
- E. Dependabot alerts

Answer: A,B,E

Explanation:
In a repository'sSecuritytab, you can view:
* Secret scanning alerts: Exposed credentials or tokens
* Dependabot alerts: Vulnerable dependencies from the advisory database
* Code scanning alerts: Vulnerabilities in code detected via static analysis (e.g., CodeQL) Youwon't seegeneral "security status

alerts" (not a formal category) or permission-related alerts here.

NEW QUESTION # 74
Which Dependabot configuration fields are required? (Each answer presents part of the solution. Choose three.)

- A. allow
- B. directory
- C. milestone
- D. package-ecosystem
- E. schedule.interval

Answer: B,D,E

Explanation:
Comprehensive and Detailed Explanation:
When configuring Dependabot via the dependabot.yml file, the following fields are mandatory for each update configuration:
directory: Specifies the location of the package manifest within the repository. This tellsDependabot where to look for dependency files.
package-ecosystem: Indicates the type of package manager (e.g., npm, pip, maven) used in the specified directory.
schedule.interval: Defines how frequently Dependabot checks for updates (e.g., daily, weekly). This ensures regular scanning for outdated or vulnerable dependencies.
The milestone field is optional and used for associating pull requests with milestones. The allow field is also optional and used to specify which dependencies to update.
GitLab

NEW QUESTION # 75
Which of the following options would close a Dependabot alert?

- A. Creating a pull request to resolve the vulnerability that will be approved and merged
- B. Viewing the Dependabot alert on the Dependabot alerts tab of your repository
- C. Viewing the dependency graph
- D. Leaving the repository in its current state

Answer: A

Explanation:
ADependabot alertis only marked asresolvedwhen the related vulnerability is no longer present in your code
- specifically after youmerge a pull requestthat updates the vulnerable dependency.
Simply viewing alerts or graphs doesnotaffect their status. Ignoring the alert by leaving the repo unchanged keeps the vulnerability active and unresolved.

NEW QUESTION # 76
Where can you find a deleted line of code that contained a secret value?

- A. Dependency graph
- B. Insights
- C. Commits
- D. Issues

Answer: C

Explanation:
Secrets committed and then deleted are still accessible in therepository's Git history. To locate them, navigate to theCommitstab.
GitHub's secret scanning can detect secrets in both current and historical commits, which is why remediation should also includerevoking the secret, not just removing it from the latest code.

NEW QUESTION # 77

Where can you view code scanning results from CodeQL analysis?

- A. A CodeQL query pack
- B. At Security advisories
- C. The repository's code scanning alerts
- D. A CodeQL database

Answer: C

Explanation:
All results from CodeQL analysis appear under the repository's code scanning alerts tab. This section is part of the Security tab and provides a list of all current, fixed, and dismissed alerts found by CodeQL.
A CodeQL database is used internally during scanning but does not display results. Query packs contain rules, not results. Security advisories are for published vulnerabilities, not per-repo findings.

NEW QUESTION # 78

......

We will continue to pursue our passion for better performance and human-centric technology of latest GitHub-Advanced-Security quiz prep. And we guarantee you to pass the exam for we have confidence to make it with our technological strength. A good deal of researches has been made to figure out how to help different kinds of candidates to get the GitHub-Advanced-Security certification. We treasure time as all customers do.
