Mercenary men lust for wealth, our company offer high quality AWS-Solutions-Associate practice engine rather than focusing on mercenary motives. They are high quality and high effective AWS-Solutions-Associate training materials and our efficiency is expressed clearly in many aspects for your reference. The first one is downloading efficiency. The second is expressed in content, which are the proficiency and efficiency of AWS-Solutions-Associate Study Guide. You will love our AWS-Solutions-Associate exam questions as long as you have a try!

Amazon AWS-Solutions-Associate (AWS Certified Solutions Architect - Associate (SAA-C02)) certification exam is designed to test the candidate's knowledge and skills in designing and deploying scalable, highly available, and fault-tolerant systems on AWS. It is an associate-level certification that is ideal for individuals who want to demonstrate their expertise in cloud computing and gain recognition as an AWS Solutions Architect. AWS Certified Solutions Architect - Associate (SAA-C03) certification exam is based on the latest AWS SAA-C02 exam blueprint, which includes updated content and focuses on the latest AWS services and best practices.

The AWS-Solutions-Associate Exam consists of multiple-choice questions, and candidates have 130 minutes to complete the exam. AWS-Solutions-Associate exam is available in multiple languages, including English, Japanese, Korean, and Simplified Chinese. The passing score for the exam is 720 out of 1000 points.

AWS-Solutions-Associate New Learning Materials - 100% Pass Realistic Amazon Reliable AWS Certified Solutions Architect - Associate (SAA-C03) Dumps Book

The scoring system of our AWS-Solutions-Associate exam torrent absolutely has no problem because it is intelligent and powerful. First of all, our researchers have made lots of efforts to develop the scoring system. So the scoring system of the AWS-Solutions-Associate test answers can stand the test of practicability. Once you have submitted your practice. The scoring system will begin to count your marks of the AWS-Solutions-Associate exam guides quickly and correctly. You just need to wait a few seconds before knowing your scores. The scores are calculated by every question of the AWS-Solutions-Associate Exam guides you have done. So the final results will display how many questions you have answered correctly and mistakenly. You even can directly know the score of every question, which is convenient for you to know the current learning condition.

Amazon AWS Certified Solutions Architect - Associate (SAA-C03) Sample Questions (Q444-Q449):

NEW QUESTION # 444

You are setting up some EBS volumes for a customer who has requested a setup which includes a RAID (redundant array of inexpensive disks). AWS has some recommendations for RAID setups. Which RAID setup is not recommended for Amazon EBS?

- A. RAID 5 and RAID 6
- B. RAID 1 and RAID 6
- C. RAID 1 only
- D. RAID 5 only

Answer: A

Explanation:

With Amazon EBS, you can use any of the standard RAID configurations that you can use with a traditional bare metal server, as long as that particular RAID configuration is supported by the operating system for your instance. This is because all RAID is accomplished at the software level. For greater I/O performance than you can achieve with a single volume, RAID 0 can stripe multiple volumes together; for on-instance redundancy, RAID 1 can mirror two volumes together.

RAID 5 and RAID 6 are not recommended for Amazon EBS because the parity write operations of these RAID modes consume some of the IOPS available to your volumes.

Reference: <http://docs.aws.amazon.com/AWSEC2/latest/UserGuide/raid-config.html>

NEW QUESTION # 445

In Amazon Elastic Compute Cloud, you can specify storage volumes in addition to the root device volume when you create an AMI or when launching a new instance using_____.

- A. batch storage mapping
- B. block device mapping
- C. object mapping
- D. datacenter mapping

Answer: B

Explanation:

When creating an AMI or launching a new instance, you can assign more than one block storage device to it.

This device will be automatically set ready for you through an automated process known as block device mapping.

NEW QUESTION # 446

A Solutions Architect is designing a new social media application. The application must provide a secure method for uploading profile photos. Each user should be able to upload a profile photo into a shared storage location for one week after their profile is created.

Which approach will meet all of these requirements?

- A. Use Amazon Kinesis with AWS CloudTrail for auditing the specific times when profile photos are uploaded.
- **B. Use Amazon S3 with the default private access policy and generate pre-signed URLs each time a new site profile is created.**
- C. Use Amazon CloudFront with AWS CloudTrail for auditing the specific times when profile photos are uploaded.
- D. Use Amazon EBS volumes with IAM policies restricting user access to specific time periods.

Answer: B

NEW QUESTION # 447

A disaster response team is using drones to collect images of recent storm damage. The response team's laptops lack the storage and compute capacity to transfer the images and process the data. While the team has Amazon EC2 instances for processing and Amazon S3 buckets for storage, network connectivity is intermittent and unreliable. The images need to be processed to evaluate the damage.

What should a solutions architect recommend?

- A. Configure Amazon Kinesis Data Firehose to create multiple delivery streams aimed separately at the S3 buckets for storage and the EC2 instances for processing the images.
- **B. Use AWS Snowball Edge devices to process and store the images.**
- C. Upload the images to Amazon Simple Queue Service (Amazon SQS) during intermittent connectivity to EC2 instances.
- D. Use AWS Storage Gateway pre-installed on a hardware appliance to cache the images locally for Amazon S3 to process the images when connectivity becomes available.

Answer: B

NEW QUESTION # 448

A three-tier web application processes orders from customers. The web tier consists of Amazon EC2 instances behind an Application Load Balancer, a middle tier of three EC2 instances decoupled from the web tier using Amazon SQS, and an Amazon DynamoDB backend. At peak times, customers who submit orders using the site have to wait much longer than normal to receive confirmations due to lengthy processing times. A solutions architect needs to reduce these processing times.

Which action will be MOST effective in accomplishing this?

- **A. Add an Amazon CloudFront distribution to cache the responses for the web tier.**
- B. Use Amazon ElastiCache for Redis in front of the DynamoDB backend tier.
- C. Replace the SQS queue with Amazon Kinesis Data Firehose.
- D. Use Amazon EC2 Auto Scaling to scale out the middle tier instances based on the SQS queue depth.

Answer: A

NEW QUESTION # 449

.....

Our AWS-Solutions-Associate study quiz boosts high quality and we provide the wonderful service to the client. We boost the top-ranking expert team which compiles our AWS-Solutions-Associate guide prep elaborately and check whether there is the update every day and if there is the update the system will send the update automatically to the client. The content of our AWS-Solutions-Associate Preparation questions is easy to be mastered and seizes the focus to use the least amount of answers and questions to convey the most important information.
