

# Standard AZ-305 Answers & New AZ-305 Test Objectives

BTW, DOWNLOAD part of DumpsValid AZ-305 dumps from Cloud Storage: <https://drive.google.com/open?id=1QjfWqi3-42nthbr1oD3pIXLMh-jpwSmM>

After so many years' development, our Microsoft Azure Solutions Architect Expert exam torrent is absolutely the most excellent than other competitors, the content of it is more complete, the language of it is more simply. Believing in our AZ-305 guide tests will help you get the certificate and embrace a bright future. Time and tide wait for no man. Come to buy our test engine. DumpsValid have most professional team to compiled and revise AZ-305 Exam Question. In order to try our best to help you pass the exam and get a better condition of your life and your work, our team worked day and night to complete it. Moreover, only need to spend 20-30 is it enough for you to grasp whole content of our practice materials that you can pass the exam easily, this is simply unimaginable.

With over a decade's business experience, our AZ-305 test torrent attached great importance to customers' purchasing rights all along. There is no need to worry about virus on buying electronic products. For we make endless efforts to assess and evaluate our AZ-305 exam prep' reliability for a long time and put forward a guaranteed purchasing scheme, we have created an absolutely safe environment and our AZ-305 Exam Question are free of virus attack. If there is any doubt about it, professional personnel will handle this at first time, and you can also have their remotely online guidance to install and use our AZ-305 test torrent.

## AZ-305 Test Torrent & AZ-305 Actual Test & AZ-305 Pass for Sure

If you purchase Microsoft AZ-305 exam questions and review it as required, you will be bound to successfully pass the exam. And if you still don't believe what we are saying, you can log on our platform right now and get a trial version of Designing Microsoft Azure Infrastructure Solutions AZ-305 study engine for free to experience the magic of it.

## Microsoft Designing Microsoft Azure Infrastructure Solutions Sample Questions (Q295-Q300):

### NEW QUESTION # 295

You plan to migrate App1 to Azure.

You need to recommend a storage solution for App1 that meets the security and compliance requirements.

Which type of storage should you recommend, and how should you recommend configuring the storage? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Reference:

<https://docs.microsoft.com/en-us/azure/storage/blobs/data-protection-overview>

### NEW QUESTION # 296

Your company has the divisions shown in the following table.

You plan to deploy a custom application to each subscription. The application will contain the following:

A resource group

An Azure web app

Custom role assignments

An Azure Cosmos DB account

You need to use Azure Blueprints to deploy the application to each subscription.

What is the minimum number of objects required to deploy the application? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

Box 1: 2

One management group for East, and one for West.

When creating a blueprint definition, you'll define where the blueprint is saved. Blueprints can be saved to a management group or subscription that you have Contributor access to. If the location is a management group, the blueprint is available to assign to any child subscription of that management group.

Box 2: 2

Box 3: 4

One assignment for each subscription.

"Assigning a blueprint definition to a management group means the assignment object exists at the management group. The deployment of artifacts still targets a subscription. To perform a management group assignment, the Create Or Update REST API must be used and the request body must include a value for properties.scope to define the target subscription."

<https://docs.microsoft.com/en-us/azure/governance/blueprints/overview#blueprint-assignment>

### NEW QUESTION # 297

You have an on-premises Microsoft SQL Server database named SQL1.

You plan to migrate SQL 1 to Azure.

You need to recommend a hosting solution for SQL1. The solution must meet the following requirements:

\* Support the deployment of multiple secondary, read-only replicas.

\* Support automatic replication between primary and secondary replicas.

\* Support failover between primary and secondary replicas within a 15-minute recovery time objective (RTO).

**Answer:**

Explanation:

Explanation:

### NEW QUESTION # 298

Hotspot Question

You have an Azure subscription that contains the resources shown in the following table.

You create an Azure SQL database named DB1 that is hosted in the East US region.

To DB1, you add a diagnostic setting named Settings1. Settings1 archives SQLInsights to storage1 and sends SQLInsights to Workspace1.

For each of the following statements, select Yes if the statement is true. Otherwise, select No.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

Box 1: Yes

A single diagnostic setting can define no more than one of each of the destinations. If you want to send data to more than one of a particular destination type (for example, two different Log Analytics workspaces), then create multiple settings.

Each resource can have up to 5 diagnostic settings.

Note: This diagnostic telemetry can be streamed to one of the following Azure resources for analysis.

- \* Log Analytics workspace

- \* Azure Event Hubs

- \* Azure Storage

Box 2: Yes

Box 3: Yes

References:

<https://docs.microsoft.com/en-us/azure/azure-monitor/essentials/diagnostic-settings>

<https://docs.microsoft.com/en-us/azure/azure-sql/database/metrics-diagnostic-telemetry-logging-streaming-export-configure?tabs=azure-portal>

**NEW QUESTION # 299**

You have an Azure Load Balancer named LB1 that balances requests to five Azure virtual machines.

You need to develop a monitoring solution for LB1. The solution must generate an alert when any of the following conditions are met:

- A virtual machine is unavailable.

- Connection attempts exceed 50,000 per minute.

Which signal should you include in the solution for each condition? To answer, select the appropriate options in the answer area.

NOTE: Each correct selection is worth one point.

**Answer:**

Explanation:

Explanation:

Box 1: Data path availability

Standard Load Balancer continuously exercises the data path from within a region to the load balancer front end, all the way to the SDN stack that supports your VM. As long as healthy instances remain, the measurement follows the same path as your application's load-balanced traffic. The data path that your customers use is also validated. The measurement is invisible to your application and does not interfere with other operations.

Note: Load balancer distributes inbound flows that arrive at the load balancer's front end to backend pool instances. These flows are according to configured load-balancing rules and health probes. The backend pool instances can be Azure Virtual Machines or instances in a virtual machine scale set.

Box 2: SYN count

SYN (synchronize) count: Standard Load Balancer does not terminate Transmission Control Protocol (TCP) connections or interact with TCP or UDP packet flows. Flows and their handshakes are always between the source and the VM instance. To better troubleshoot your TCP protocol scenarios, you can make use of SYN packets counters to understand how many TCP connection attempts are made. The metric reports the number of TCP SYN packets that were received.
