What's more, part of that ValidTorrent H12-891\_V1.0 dumps now are free: <https://drive.google.com/open?id=1JHNRIK VJ39S-zrca9N2rEknK3U9N651P>

Challenge is omnipresent like everywhere. By eliciting all necessary and important points into our H12-891\_V1.0 practice engine, their quality and accuracy have been improved increasingly, so their quality is trustworthy and unquestionable. There is a bunch of considerate help we are willing to offer on our H12-891\_V1.0 learning questions. If you have any question on downloading or opening the file, you can just contact us. And we will help you until you can use our H12-891\_V1.0 exam prep.

Huawei H12-891\_V1.0 Certification program is designed to help professionals enhance their knowledge and skills in the field of data communication. HCIE-Datacom V1.0 certification exam covers a wide range of topics, including network architecture, routing and switching, IP multicast, MPLS VPN, network security, network management, and many more. HCIE-Datacom V1.0 certification program is an excellent way for professionals to showcase their expertise and to gain recognition for their skills.

## Exam Huawei H12-891\_V1.0 Vce, H12-891\_V1.0 Valid Test Materials

What adds to the dominance of the ValidTorrent market is its promise to give its customers the latest H12-891\_V1.0 practice exams. The hardworking and strenuous support team is always looking to refine the H12-891\_V1.0 prep material and bring it to the level of excellence. It materializes this goal by taking responses from above 90,000 competitive professionals.

## Huawei HCIE-Datacom V1.0 Sample Questions (Q120-Q125):

### NEW QUESTION # 120

The on-premise mode is recommended for controller deployment on small and midsize campus networks.

- A. TRUE
- B. FALSE

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation:

On-premise mode refers to deploying the Huawei iMaster NCE-Campus controller within the enterprise network instead of using a cloud-based solution.

# Best suited for small and midsize campus networks that require:

- \* Greater control over data security
- \* Local network automation
- \* No reliance on cloud connectivity

Since on-premise mode is recommended for small and midsize campus networks, the statement is TRUE.

# Reference: Huawei HCIE Datacom - iMaster NCE Deployment Modes

### NEW QUESTION # 121

Congestion management technology can be used to discard data packets in the buffer queue to prevent the buffer queue from being exhausted.

- A. FALSE
- B. TRUE

**Answer: A**

Explanation:

This statement confuses congestion management with congestion avoidance:

Congestion Management: Refers to techniques like PQ, CQ, WRR, etc., to schedule packets in queues - i.e., manage how packets are sent, not discarded.

Congestion Avoidance: Techniques like WRED are used to preemptively discard packets to avoid full queues - these do discard packets.

Hence, congestion management does NOT discard packets - it's about controlling transmission order and prioritization.

Correct answer: B. FALSE

### NEW QUESTION # 122

Which of the following statements about SR-MPLS characteristics are correct? (Select all that apply)

- A. Such networks can quickly interact with upper-layer applications through the source routing technology.
- B. Only the controller can compute paths based on explicit paths.
- C. SR-MPLS supports smooth network evolution by extending existing protocols, such as IGPs.
- D. Efficient TI-LFA FRR protection is provided for fast path fault recovery.

**Answer: A,C,D**

Explanation:

Let's break it down:

A). # Incorrect - Path computation can be done by both controller and ingress routers, not just the controller.

B). # SR-MPLS extends IGP protocols (e.g., OSPF/IS-IS) for segment distribution, allowing smooth evolution.

C). # Supports TI-LFA (Topology Independent Loop-Free Alternate) for fast failure recovery.

D). # Through source routing, SR-MPLS integrates easily with applications for programmable path control.

Exact Extract - HCIE-Datacom Segment Routing Chapter:

"SR-MPLS supports distributed and centralized path computation, uses IGP extensions for deployment, and supports TI-LFA for FRR. It allows interaction with applications through programmable routing." Reference:

Huawei Segment Routing White Paper

HCIE-Datacom Study Guide - SR-MPLS Technology

### NEW QUESTION # 123

The TTL field encapsulated in the MPLS label header can prevent infinite loops of MPLS packets. Which of the following statements regarding the TTL field are correct?

- A. The processing of IP TTL copy hides the LSR in an MPLS domain, improving network security.
- B. MPLS encapsulation in frame mode supports the TTL field. MPLS encapsulation in cell mode does not support the TTL field.
- C. MPLS provides two processing modes on the TTL field: TTL in the MPLS header copies the IP TTL value when an IP packet enters the MPLS network. The ingress LER sets the TTL value in the MPLS header to 255.
- D. If TTL copy is disabled, users can use the traceroute function to view the LSR of the MPLS domain.

**Answer: A,B,C**

Explanation:

The Time-To-Live (TTL) field in MPLS is essential for preventing infinite loops and enhancing security.

MPLS TTL Field Functionality:

It prevents packets from circulating indefinitely in the MPLS network.

It allows traceroute (tracert) to identify MPLS hops when TTL propagation is enabled.

Explanation of Correct Answers: #B. The processing of IP TTL copy hides the LSR in an MPLS domain, improving security.

If TTL propagation is disabled, MPLS routers do not decrease TTL, hiding internal LSRs from traceroute, enhancing security.

#C. MPLS provides two TTL processing modes:

Default Mode: The MPLS TTL copies the IP TTL value when an IP packet enters the MPLS network.

Uniform Mode: The ingress LER sets the MPLS TTL to 255, so it does not decrement.

#D. MPLS encapsulation in frame mode supports the TTL field, while cell mode does not.

Frame Mode (Ethernet, PPP, etc.) supports TTL.

Cell Mode (ATM/MPLS) does not support TTL.

Incorrect Answer Explanation: #A. If TTL copy is disabled, users can use the traceroute function to view MPLS hops.

Wrong! If TTL propagation is disabled, traceroute cannot see LSRs inside the MPLS core network.

## NEW QUESTION # 124

Deploying the ISIS protocol in an IPv6 environment is true in the following statement (radio).

- A. IS-IS is configured under the interface, this interface will not send ISIS packets, but will receive ISIS packets
- B. In the same broadcast network. If each router supports both IPv4 and IPv6, the DISC of IPv4 and IPv6 must be the same device
- C. By default, the DIS priority of broadcast network interfaces at Level-1 and Level-2 is 1. In broadcast networks, the DIS priority for IPv4 and IPv6 can be set separately

Answer: A

## NEW QUESTION # 125

.....

What is the selling point of a product? It is the core competitiveness of this product that is ahead of other similar brands. The core competitiveness of the H12-891\_V1.0 exam practice questions, as users can see, we have a strong team of experts, the H12-891\_V1.0 study dumps are advancing with the times, updated in real time, so that's why we can with such a large share in the market. Through user feedback recommendations, we've come to the conclusion that the H12-891\_V1.0 learning guide has a small problem at present, in the rest of the company development plan, we will continue to strengthen our service awareness, let users more satisfied with our H12-891\_V1.0 study dumps, we hope to keep long-term with customers, rather than a short high sale.
