

Access Real Actual4Exams Nutanix NCP-CI-Azure Exam Questions Easily in dumps PDF Form

BTW, DOWNLOAD part of Actual4Exams NCP-CI-Azure dumps from Cloud Storage: https://drive.google.com/open?id=1lj5oxtWjeA4EqA1FCpKsh8JOEN_LkmuI

There may be a lot of people feel that the preparation process for exams is hard and boring, and hard work does not necessarily mean good results, which is an important reason why many people are afraid of examinations. Today, our NCP-CI-Azure study materials will radically change this. High question hit rate makes you no longer aimless when preparing for the exam, so you just should review according to the content of our NCP-CI-Azure Study Materials prepared for you. Instant answer feedback allows you to identify your vulnerabilities in a timely manner, so as to make up for your weaknesses.

Do you want to pass the Nutanix NCP-CI-Azure exam better and faster? Then please select the Actual4Exams. It can help you achieve your dreams. Actual4Exams is a website that provide accurate exam materials for people who want to participate in the IT certification. Actual4Exams can help a lot of IT professionals to enhance their career blueprint. Our strength will make you incredible. You can try a part of the questions and answers about Nutanix NCP-CI-Azure Exam to test our reliability.

>> New NCP-CI-Azure Exam Question <<

Valid NCP-CI-Azure Exam Materials | NCP-CI-Azure New Dumps Pdf

Passing the NCP-CI-Azure exam requires the ability to manage time effectively. In addition to the Nutanix Certified Professional - Cloud Integration - Azure (NCP-CI-Azure v6.7) (NCP-CI-Azure) exam study materials, practice is essential to prepare for and pass the Nutanix NCP-CI-Azure exam on the first try. It is critical to do self-assessment and learn time management skills. Because the NCP-CI-Azure test has a restricted time constraint, time management must be exercised to get success. Only with enough practice one can answer real Nutanix NCP-CI-Azure exam questions in a given amount of time.

Nutanix NCP-CI-Azure Exam Syllabus Topics:

Topic	Details

Topic 1	<ul style="list-style-type: none"> • Planning an NC2 on Azure Deployment: This section of the exam measures the skills of IT Administrators and covers the preparation of the Azure cloud environment, including determining the appropriate Azure account and node types. It also involves subscribing to the NC2 service, which requires knowledge of authentication methods and organization naming conventions. Additionally, candidates must determine implementation requirements by evaluating deployment use cases and redundancy needs. Identifying networking requirements is crucial, focusing on connectivity options like VPN and CIDR ranges.
Topic 2	<ul style="list-style-type: none"> • Deploying an NC2 on Azure Environment: This section assesses the skills of Nutanix Cloud Operators and focuses on deploying the cloud cluster within the Azure environment. Candidates will learn to configure cloud provider networking effectively, ensuring that all necessary resources are correctly set up for deployment.
Topic 3	<ul style="list-style-type: none"> • Configuring an NC2 on Azure Environment: This section evaluates the skills of IT Administrators and emphasizes modifying cloud networking security to protect resources. Candidates will configure Nutanix networking settings and troubleshoot connectivity issues to ensure seamless communication within the cloud environment.
Topic 4	<ul style="list-style-type: none"> • Managing an NC2 on Azure Environment: This section relates to skills in identifying management tasks for nodes and clusters. Candidates will monitor cluster health and cloud resource performance, ensuring that all components function efficiently. Understanding these management tasks is vital for maintaining operational integrity in a hybrid cloud environment.

Nutanix Certified Professional - Cloud Integration - Azure (NCP-CI-Azure v6.7) Sample Questions (Q14-Q19):

NEW QUESTION # 14

An administrator needs to attach a network interface to a Flow Gateway VM.

What option should be enabled in the Azure portal and in the OS of the Flow gateway VM to meet this network requirement?

- **A. IP Forwarding**
- B. Static Route
- C. Dynamic Route
- D. Port Tagging

Answer: A

Explanation:

IP Forwarding in Azure: Enabling IP forwarding allows the VM to forward network traffic that is not specifically addressed to itself. This is necessary for network devices like the Flow Gateway VM to route traffic correctly.

Network Interface Configuration: Both the Azure portal settings and the VM's operating system must have IP forwarding enabled to ensure proper traffic handling and routing capabilities.

Azure Virtual Machine Networking Documentation

Nutanix Flow Gateway Configuration Guide

NEW QUESTION # 15

Which service enables the monitoring of key metrics on various Azure services, including virtual networks, virtual machines, and bare metal hosts for an NC2 cluster?

- A. Azure Service Health
- B. Resource Manager
- C. Azure Network Watcher
- **D. Azure Monitor**

Answer: D

Explanation:

- * Azure Monitor Overview: Azure Monitor is a comprehensive monitoring service that collects, analyzes, and acts on telemetry data from Azure resources.
 - * Key Metrics Monitoring: Azure Monitor enables the monitoring of various Azure services such as virtual networks, virtual machines, and bare metal hosts, providing insights and visibility into their performance and health.
 - * Comparison of Services:
 - * Resource Manager: Manages Azure resources but does not provide detailed monitoring capabilities.
 - * Azure Service Health: Provides personalized alerts and guidance when Azure service issues affect you but is not a comprehensive monitoring solution.
 - * Azure Network Watcher: Focuses on network performance monitoring and diagnostics but does not cover all resource types.
 - * Conclusion: Azure Monitor is the most suitable service for monitoring key metrics across a wide range of Azure services.
- References:
- * Azure Monitor Documentation
 - * Nutanix NC2 on Azure Monitoring Guide

NEW QUESTION # 16

A new subnet needs to be created within Flow Virtual Networking to accommodate a new type of workload in the company's NC2 Azure instance.

Which type of network will satisfy this task?

- A. VPC
- B. Underlay
- C. Overlay
- D. VNET

Answer: C

Explanation:

- * Flow Virtual Networking: Nutanix Flow Virtual Networking allows for the creation of overlay networks to segment and manage network traffic.
 - * Network Types:
 - * Underlay: Refers to the physical network infrastructure.
 - * Overlay: Logical network built on top of the physical infrastructure, providing flexibility for creating isolated subnets and accommodating different workloads.
 - * VPC: Virtual Private Cloud, a network within a public cloud provider.
 - * VNET: Azure-specific virtual network.
 - * Requirement: Creating a subnet for new workloads within Flow Virtual Networking suggests using an overlay network for logical separation and management.
 - * Conclusion: An overlay network within Flow Virtual Networking will satisfy the task of accommodating a new type of workload in the NC2 Azure instance.
- References:
- * Nutanix Flow Networking Guide
 - * Azure Virtual Network Documentation

NEW QUESTION # 17

An administrator is tasked with allowing inbound connectivity for a user VM that resides on a NAT network.

The communicating successfully with other VMs in the NAT network.

The cluster has the following characteristics

- A Transit VPC exists
- * A User VPC exists
- * A NAT subnet has been created
- * 25 floating IP addresses are in use by other VMs
- * Routes have been configured

When the administrator attempts to assign a floating IP address to the VM, none are available.

What is the reason for this?

- A. Geneve encapsulation only supports 25 Floating IP addresses.
- B. Additional floating IP addresses need to be requested.
- C. An additional Flow Gateway instance is required.

- D. An external DHCP server needs to be deployed into the cluster.

Answer: B

Explanation:

* Floating IP Address Limitation: The cluster already has 25 floating IP addresses in use by other VMs.

If the administrator cannot assign a floating IP address to the new VM, it is because the pool of available floating IPs is exhausted.

* Requesting Additional Floating IPs: To resolve this issue, the administrator needs to request additional floating IP addresses to be allocated to the NAT subnet. This will ensure that there are enough IP addresses available for all VMs requiring inbound connectivity.

References:

* Nutanix Networking Configuration Guide

* Azure IP Address Management Documentation

NEW QUESTION # 18

The cluster has the following configuration:

A Transit VPC exists as Default, but is additionally configured with a overlay-external-subnet-nonat overlay subnet The ERP for the Transit VPC is 10.1.1.0/25 A User VPC exists named User_VPC_Prod The ERP for the User VPC is 10.1.1.0/24 Outbound and inbound routes have been configured A User VM NO-NAT subnet has been configured in the User VPC The administrator has successfully created a VM and added the NIC associated with the NO-NAT subnet, but is not able to communication with other resources.

Which option will resolve this issue?

- A. The ERP in the User VPC must be from a different CIDR range than the ERP in the transit VPC.
- B. Verify that the route table associated with the User VPC has appropriate routes to the Transit VPC.
- C. Check that the network ACLs for the NO-NAT subnet are not blocking the necessary traffic.
- D. Ensure that the security groups associated with the VM allow traffic to and from the desired resources.

Answer: A

Explanation:

In this scenario, the issue arises from overlapping IP address ranges between the Transit VPC and the User VPC. Here's a detailed breakdown:

* Understanding ERPs (Elastic Routing Prefixes):

* The ERP for the Transit VPC is 10.1.1.0/25, which covers IP addresses from 10.1.1.0 to 10.1.1.127.

* The ERP for the User VPC is 10.1.1.0/24, which covers IP addresses from 10.1.1.0 to 10.1.1.255.

* IP Address Overlap:

* Since 10.1.1.0/25 is a subset of 10.1.1.0/24, there is a significant overlap in the IP address ranges of these two ERPs.

* This overlap can cause routing issues because the same IP address range is being used in both VPCs, leading to ambiguity in routing and communication.

* Communication Issue:

* When a VM in the User VPC tries to communicate with other resources, the network cannot accurately determine the correct route due to the overlapping IP address ranges.

* This overlap prevents proper routing and results in the VM being unable to communicate with other resources as intended.

* Resolution:

* To resolve this issue, the ERPs must be in different CIDR ranges. This means the IP address ranges for the Transit VPC and the User VPC should not overlap.

* For example, if the Transit VPC uses 10.1.1.0/25, the User VPC could use a different range such as 10.1.2.0/24 or any other range that does not overlap with 10.1.1.0/25.

By ensuring that the ERPs are in different CIDR ranges, the network can properly route traffic between the VPCs without any conflicts or ambiguities, thereby enabling the VM in the User VPC to communicate with other resources effectively.

NEW QUESTION # 19

.....

No doubt the Nutanix NCP-CI-Azure certification exam is one of the most difficult Actual4Exams certification exams in the modern Actual4Exams world. This NCP-CI-Azure exam always gives a tough time to their candidates. The Actual4Exams understands this challenge and offers real, valid, and top-notch Nutanix NCP-CI-Azure Exam Dumps in three different formats. All these three

NCP-CI-Azure exam questions formats are easy to use and compatible with all devices, operating systems, and web browsers.
