Pass Guaranteed 2026 AP-222: Public Sector Solutions Accredited Professional Updated Valid Exam Tutorial

Everybody wants success, but not everyone has a strong mind to persevere in study. If you feel unsatisfied with your present status, our AP-222 actual exam can help you out. Our products always boast a pass rate as high as 99%. Using our AP-222 study materials can also save your time in the exam preparation. If you choose our AP-222 Test Engine, you are going to get the AP-222 certification easily. Just make your choice and purchase our study materials and start your study right now!

Salesforce Public Sector Solutions Accredited Professional Sample Questions (Q29-Q34):

NEW QUESTION # 29

A Consultant has been asked to create a widget that aggregates and calculates information from multiple unrelated objects.
Working with OmniStudio, which tool can accomplish this declaratively?

- **A. Integration Procedures**
- B. SOQL Queries
- C. MuleSoft Integration
- D. Apex Classes

Answer: A

Explanation:
When tasked with creating a widget in OmniStudio that aggregates and calculates information from multiple unrelated objects, the most appropriate tool to accomplish this declaratively is Integration Procedures (Option A). Integration Procedures in OmniStudio are designed to handle complex data operations that involve multiple objects, potentially including data aggregation, transformation, and logic application, without requiring custom code.
* Option B, MuleSoft Integration, is primarily used for connecting Salesforce with external systems, not for aggregating data within Salesforce.
* Option C, SOQL Queries, can retrieve data but do not themselves handle complex multi-object calculations and logic in a declarative manner.
* Option D, Apex Classes, are a coding solution, not declarative, and would be used when more complex custom behavior that cannot be achieved declaratively is required.
Integration Procedures allow a declarative approach, fitting the need to work with multiple objects effectively and efficiently within the Salesforce platform.

NEW QUESTION # 30

A public sector organization (PSO) is implementing Public Sector Solutions. As part of this implementation, the PSO is deploying a new site to provide constituents with information about the service they provide.
Constituents will be able to register and log into this new site to access some features as well. The PSO needs to ensure that constituents are unable to see each other by default for all sites that they configure.
What can the Technical Consultant configure to meet this requirement for the PSO?

- A. Remove access to the user object from the Permission Set assigned to the external users
- B. Disable the user sharing in the site administration settings page
- **C. Uncheck the 'Site User Visibility' checkbox in the sharing settings page**
- D. Set the Organization Wide Default for the User Object to "Public Read Only"

Answer: C

Explanation:
In Salesforce Public Sector Solutions, to ensure that constituents (external users) cannot see each other by default on the new site, the sharing settings must be appropriately configured. Specifically, the 'Site User Visibility' setting is designed to control whether users can see each other within the site. Here's how to configure it:
* Navigate to Sharing Settings:
* Go to Setup > Security > Sharing Settings.
* Uncheck Site User Visibility:
* Locate the 'Site User Visibility' checkbox within the sharing settings.
* Uncheck this box. This setting ensures that site users (constituents) cannot see each other's profiles and details by default.
By unchecking the 'Site User Visibility' checkbox, the PSO ensures that user records are private and not visible to other users on the site. This is a critical setting for maintaining privacy and security for constituents interacting with the PSO's site.

NEW QUESTION # 31

A resident in the city of Richdale has concerns about unnecessary debris from construction at a nearby residence and has filed a complaint with the city. The city uses Public Sector Solutions for LPI (Licensing, Permitting & Inspections) to manage residential construction permits.
What three recommendations should a Technical Consultant provide to the city to handle complaints from residents and tie them

back to existing residential construction permits?

- A. Configure Action Plans on Cases and Permits
- B. Set up Business Rules Engine (BRE) to determine Complaint validity.
- C. Link Cases to Permits
- D. Link Inspections and Visits to Permit Applications
- E. Configure Inspections and Visits

Answer: A,D,E

Explanation:
Linking inspections and visits to permit applications allows the city to track the progress and status of the inspections related to the complaints. Configuring inspections and visits enables the city to define the inspection types, schedules, checklists, and outcomes. Configuring action plans on cases and permits allows the city to automate the inspection tasks and workflows, assign them to inspectors, and collaborate on them using Chatter. NEW QUESTION # 32
A public sector agency recently implemented public Sector Solutions for the inspection and license renewal of food outlets in the city. The want to set up dynamic assessments where assessment questions are categorized for use in different scenarios depending on whether the outlet is take-way, dining, or a combination of both.
The categorization only applies to specific questions in the assessment.
Two which objects should they add new categories?

- A. Action Plan
- B. Assessment Task Definition
- C. Assessment indicator Definition
- D. Assessment Question

Answer: C,D

Explanation:
For a public sector agency implementing dynamic assessments within Salesforce Public Sector Solutions, the appropriate categorization should be applied to the following objects:
* Assessment Question:
* The Assessment Question object is used to define individual questions that will be asked during an assessment. By adding categories to these questions, the agency can dynamically include or exclude questions based on the specific scenario (e.g., take-away, dining, or both).
* This allows for flexibility and ensures that only relevant questions are presented based on the type of food outlet being inspected.
* Assessment Indicator Definition:
* The Assessment Indicator Definition object is used to define criteria and indicators that aggregate assessment questions. Adding categories to these definitions helps in organizing and applying specific sets of questions and indicators based on the context of the assessment.
* This ensures that the assessments are dynamic and can adapt to different scenarios without requiring separate templates for each type of outlet.
By categorizing both Assessment Questions and Assessment Indicator Definitions, the agency can create a robust and flexible assessment process that adapts to various inspection contexts efficiently.

NEW QUESTION # 33
A public sector agency plans to use Public Sector Solutions for grants management. There are no in-house developers in the agency, and they are worried that some of the installation steps may potentially require development skills and the use of developer tools such as VS Code & SalesforceDX.
Which steps for Public Sector Solutions setup and installation require the use of such developer tools?

- A. Installation of OmniStudio Package in the org

- B. Activate DataPack OmniScripts and Integration Procedures
- C. Deploy the DataPack Lightning Web Component Files to the Org
- D. Download Public Sector Sample DataPacks from Process Library

Answer: C

Explanation:
Deploying the DataPack Lightning Web Component Files to the Org is a step for Public Sector Solutions setup and installation that requires the use of developer tools such as VS Code & SalesforceDX. DataPack Lightning Web Component Files are files that contain code for displaying DataPacks on Lightning Pages or Experience Sites. To deploy these files to the org, the agency needs to use a developer tool that supports metadata deployment, such as VS Code & SalesforceDX. Reference:
