## VMware Cloud Foundation 9.0 Administrator Sample Questions (Q12-Q17):

### NEW QUESTION # 12

What are three prerequisites for deploying an NSX Edge cluster in a VMware Cloud Foundation solution? (Choose three.)

- A. Verify that the NSX host overlay VLAN and NSX Edge overlay VLAN are routed to each other.
- B. Set up vSAN storage policies for the Edge VMs.
- C. Assign separate VLAN IDs and subnets for the NSX host overlay and NSX Edge overlay networks.
- D. Install Aria Operations and enable Edge Cluster monitoring.
- E. Create DNS entries for the NSX Edge nodes.

Answer: A,C,E

Explanation:

The NSX host overlay VLAN and NSX Edge overlay VLAN need to be routed to each other to ensure proper communication between the host and NSX Edge clusters.

DNS entries for the NSX Edge nodes are required to enable name resolution, which is important for the proper functioning of the NSX Edge cluster.

Assigning separate VLAN IDs and subnets for the NSX host overlay and NSX Edge overlay networks is necessary to maintain network isolation and optimize traffic flow between components.

### NEW QUESTION # 13

Which of the following considerations apply when deploying NSX for micro-segmentation in a vSphere environment?

- A. vSphere HA must be disabled for NSX to function
- B. Distributed Firewall rules can be applied at the virtual NIC level
- C. Using Guest Introspection services for offloaded antivirus scanning
- D. Proper IP addressing and VLAN design for NSX management and VXLAN traffic

**Answer: B,C,D**

Explanation:

NSX micro-segmentation uses distributed firewall rules at vNIC level (A), requires dedicated network design (C), and integrates with Guest Introspection for security (D). HA does not need to be disabled (B).

### NEW QUESTION # 14

Which statement describes Harbor?

- A. Harbor is an image scanner used to verify that images are free from vulnerabilities and patches.
- B. Harbor requires all images be pulled from GitHub for validation.
- C. Harbor is an open source registry that secures artifacts with policies and RBAC, scans images for vulnerabilities, and signs images as trusted.
- D. Harbor, formerly known as Bitnami, is an image catalog for downloading verified open-source packages.

**Answer: C**

Explanation:

Harbor is an open source registry that secures artifacts with policies and role-based access control, ensures images are scanned and free from vulnerabilities, and signs images as trusted.

### NEW QUESTION # 15

What is the primary purpose of configuring a Key Management Server (KMS) in vCenter for VM Encryption?

- A. To monitor network traffic for VMs.
- B. To optimize the performance of encrypted VMs.
- C. To manage encryption keys for securing VM data.
- D. To provide high availability for virtual machines.

**Answer: C**

Explanation:

The primary purpose of configuring a Key Management Server (KMS) in vCenter for VM Encryption is to manage and store the encryption keys that are used to secure virtual machine data. The KMS ensures that encryption keys are handled securely and provides a central management point for encrypting VMs in a VMware environment.

### NEW QUESTION # 16

When troubleshooting an ESXi host that is intermittently disconnecting from vCenter, which actions might help identify the root cause?

- A. Pinging the ESXi host management IP address from vCenter

- B. Checking the vmkernel logs on the ESXi host
- C. Disabling DRS and HA on the entire cluster
- D. Verifying port connectivity on firewalls or management networks

**Answer: A,B,D**

Explanation:

ESXi logs contain detailed error messages, network connectivity tests (ping) can reveal latency or packet loss, and ensuring firewall ports are open is crucial. Disabling DRS and HA (C) might be a troubleshooting step in some cases, but it does not directly address connectivity issues.
