Answer: B

NEW QUESTION # 41

開発者は、サンドボックスではテストの失敗を確認しましたが、本番環境では確認しませんでした。サンドボックスの作成以降、どちらの環境でもコードやメタデータの変更は行われていません。この問題を解決するには、どの点を確認すべきでしょうか？

- A. サンドボックスが本番環境と同じリリースであることを確認します。 17
- B. Apex クラスが同じ API バージョンであることを確認します。 16
- C. テストクラスが SeeAllData = true を使用していることを確認します。 15
- D. 「並列 Apex テストを無効にする」のチェックが外れていることを確認します。 18

Answer: A

Explanation:

When code behavior differs between two environments that theoretically share the same codebase, the root cause is often the underlying platform version. Salesforce releases updates (e.g., Spring, Summer, Winter) on a staggered schedule. Sandbox instances are frequently updated to the "Preview" version of the upcoming release weeks before the Production environment.

If a sandbox is on a newer release (Option C), it may include changes to the Apex compiler, new platform governor limits, or modifications to how standard objects behave. If a test relies on a specific behavior that changed in the new release, it might fail in the sandbox while still passing in the older Production environment.

Option A (SeeAllData=true) is a poor practice and would likely cause more issues rather than resolve them. Option B is unlikely because API versions are fixed in the metadata of the class and wouldn't change spontaneously. Option D relates to execution speed and resource contention but rarely causes a functional test to pass in one environment and fail in another unless there are significant race conditions. Checking the release version is the standard first step when diagnosing environment-specific discrepancies in the absence of code changes.
