

Quiz 2026 Dynatrace Dynatrace-Associate: Useful Dynatrace Associate Certification Exam Valid Exam Tips

With limited time for your preparation, many exam candidates can speed up your pace of making progress. Our Dynatrace-Associate practice materials will remedy your faults of knowledge understanding for our Dynatrace-Associate exam questions contain everything you need in the real Dynatrace-Associate exam. You won't regret your decision of choosing our Dynatrace-Associate training guide. In contrast, they will inspire your potential without obscure content to feel. After getting our Dynatrace-Associate exam prep, you will not live under great stress during the exam period.

Dynatrace Dynatrace-Associate Exam Syllabus Topics:

Section	Weight	Objectives
Installation & Configuration	20%	- OneAgent deployment
		- Infrastructure monitoring configuration
		- ActiveGate setup
		- Application instrumentation
		- Tags and management zones
Digital Experience Management (DEM)	16%	- Synthetic monitoring
		- Real User Monitoring (RUM)
		- Mobile monitoring (iOS & Android)
		- User session analysis

Components & Architecture	8%	- OneAgent, ActiveGate, Dynatrace Platform - Integration with 3rd party systems - Dynatrace structure and components - System communication and data reporting - Grail data lakehouse
Capabilities & Monitoring	24%	- Data gathering and analysis - Smartscape real-time topology - PurePath distributed tracing - How Dynatrace operates in your environment - Full-stack performance monitoring of applications
Problems & Resolution	14%	- Alerts and notifications - Event correlation - Davis AI anomaly detection - Problem lifecycle and root cause analysis
Reporting & Analysis	18%	- Log management and analytics - Dashboards and visualization - Business analytics and KPIs - Notebooks and investigation - DQL (Dynatrace Query Language)

Valid Dynatrace Dynatrace-Associate Exam Notes | Dynatrace-Associate Real Exams

Our Dynatrace-Associate study guide is convenient for the clients to learn and they save a lot of time and energy for the clients. After the clients pay successfully for the Dynatrace-Associate exam preparation materials they can immediately receive our products in the form of mails in 5-10 minutes and then click on the links to use our software to learn. The clients only need 20-30 hours to learn and then they can attend the Dynatrace-Associate test. For those in-service office staff and the students who have to focus on their learning this is a good new because they have to commit themselves to the jobs and the learning and don't have enough time to prepare for the Dynatrace-Associate test

Dynatrace Associate Certification Exam Sample Questions (Q76-Q81):

NEW QUESTION # 76

Which of these data sources can I utilize when a Kubernetes cluster is being monitored?

- A. Prometheus metrics
- B. Code level insights
- C. Kubernetes specific events and metrics
- D. OpenKit monitoring data
- E. Infrastructure level metrics

Answer: A,C,E

Explanation:

When monitoring Kubernetes, Dynatrace provides multiple relevant data sources:

- * Prometheus metrics - ingested and analyzed alongside other metrics
- * Infrastructure-level metrics - CPU, memory, disk usage from nodes
- * Kubernetes-specific events and metrics - pods, deployments, namespaces, cluster events Other options:
- * Code-level insights relate to application tracing, not Kubernetes data sources directly
- * OpenKit is used for custom user session tracking, not Kubernetes monitoring Reference: Based on official Dynatrace University training materials on Kubernetes monitoring.

NEW QUESTION # 77

Select the most appropriate tool to use based on this scenario:

A colleague wants to see the Visually Complete time and the User Action time for a subset of user actions, filtered by a specific user action property and multiple different geolocations. This user specifically wants to ensure that they can see all the user actions that have the same name across multiple apps.

- A. Notebooks
- **B. Multidimensional Analysis for User Actions**
- C. User Sessions Query Language (USQL)
- D. Dashboards
- E. Data Explorer

Answer: B

Explanation:

Multidimensional Analysis for User Actions is designed specifically for deep analysis of user actions with multiple filters and dimensions.

It allows:

- * Filtering by user action properties
- * Comparing across geolocations
- * Aggregating user actions with the same name across applications
- * Viewing metrics like Visually Complete time and User Action duration

Other tools are less suitable:

- * USQL is legacy and less flexible
- * Dashboards are for visualization, not deep filtering
- * Data Explorer focuses on metrics, not user actions
- * Notebooks are not optimized for this specific RUM analysis

Reference: Based on official Dynatrace University training materials on RUM and user action analysis.

NEW QUESTION # 78

Which of the following properties are added to your ingested log data when trace enrichment for logs is enabled? (Select all that apply)

- A. dt.security_context
- B. DT_RELEASE_VERSION
- **C. dt.trace_id**
- **D. dt.entity.process_group_instance**
- **E. dt.span_id**

Answer: C,D,E

Explanation:

When trace enrichment for logs is enabled in Dynatrace, additional metadata is automatically added to logs to correlate them with distributed traces.

The key properties added include:

- * dt.trace_id - uniquely identifies the distributed trace
- * dt.span_id - identifies the specific span within the trace
- * dt.entity.process_group_instance - links the log to the specific monitored process instance These attributes enable:
 - * Seamless correlation between logs and traces
 - * End-to-end observability across services
 - * Faster root cause analysis by linking logs directly to transactions

The other options are not part of trace enrichment:

- * dt.security_context is related to log access control, not trace enrichment
- * DT_RELEASE_VERSION is used for versioning metadata, not tracing

Reference: Based on official Dynatrace University training materials covering log monitoring and trace-log correlation.

NEW QUESTION # 79

Welcome to the Practical section of your exam!

This portion of the exam requires you to configure and analyze various components within Dynatrace and is open book using Dynatrace documentation ONLY by opening a new tab. The Dynatrace Operator is already deployed for you in a Kubernetes environment (Linux host) in Cloud-Native Full-Stack. The easyTrade and easyTravel applications are also already deployed for you.

You will most likely only interact with the Dynatrace Environment (SaaS Platform). For a majority of these questions: paste or attach your screen captures directly to the question using the image control.

Information for connecting to exam components is provided in Dynatrace University in your event classroom.

Open the Associate Exam Event / Classroom and go to the Environments tab, <https://universitv.dynatrace.com/account/events>

If you deem it necessary: you may use SSH through the built in terminal or through an SSH client of your choice. Use the IP address and credentials provided to log in to the Linux virtual machine running your Kubernetes cluster. When you SSH to the public IP and are presented with the credential prompt, enter the provided username and then the provided password.

Review these and additional instructions for connecting to your environment and creating screenshots by clicking 'View all questions' and then the 'Info' icon.

easyTravel Information

easyTravel is a multi-tier application implemented in .Net and Java. It provides a web portal which allows users to log in, search for journeys to various destinations, select promotional journeys that are offered, and to book a journey using credit card details. Additionally, a Business-to-Business (B2B) web portal for travel agencies is provided where travel agencies can manage the journeys that they offer and can review reports about created bookings.

easyTrade Information

easyTrade is also a multi-tier application that allows you to login as a fake user or even create a new user.

After which point, you are able to buy and sell stocks or deposit money into your balance using fake information. These interactions will create transactions in Dynatrace for you to analyze. However, there is a load generator running which means that interacting with this page should not be necessary to answer the questions.

Tips for completing tasks:

1. Read each task carefully and fully before starting, and then follow the instructions to complete each task.
2. Be sure your screen captures match the requirements stated and are readable.
3. To create your screen captures, you can zoom your screen, or take multiple screenshots to show all the areas requested. You can attach multiple images to the same question. It is recommended to provide more proof than necessary and document your steps. When in doubt, the old saying "show your work", comes in handy.
4. Use a screen capture tool to create and then copy to your clipboard and paste screen captures directly into the file upload control. To upload a file, allowed file types for the upload are: Jpg, .jpeg, and .png.
5. When saving your images for upload into the test be sure that your image titles do not contain the following characters:!, -, _., ", ', (,).
6. To access the web portal, use the links found in the SSH terminal. They will be listed as soon as you login.

Tasks1:

An application team needs to know how much memory their application, EasyTrade, is taking up in their Kubernetes cluster. They have to see the memory usage for all the pods running in the 'easytrade' namespace, summed up into a single metric. Use a Dashboard in the new Platform interface (not Dashboards Classic) to show this information to the team and set the timeframe for this data to look at the last 30 minutes. Call this dashboard "EasyTrade memory usage".

Screen capture(s) required:

Upload image(s) that show the following:

1. A dashboard "EasyTrade memory usage".
2. The tile used to display memory usage for all pods in the "easytrade" namespace as well as its configuration.

Answer:

Explanation:

See the solution below

Explanation:

Objective

Create a dashboard in the new Dynatrace platform (NOT Classic) that shows:

* Memory usage

* For all pods

- * In easytrade namespace
- * Summed into a single metric
- * Timeframe = Last 30 minutes
- * Dashboard name = EasyTrade memory usage

STEP-BY-STEP EXECUTION

Step 1: Open Dashboards (New Platform)

- * Go to: # Dashboards & Notebooks
- * Click: # Dashboards
- * Click: # Create Dashboard

Step 2: Name the Dashboard

- * Set name exactly as: # EasyTrade memory usage

Match spelling exactly (case-sensitive matters sometimes)

Step 3: Add a Tile

- * Click: # Add Tile
- * Select: # Data Explorer

Step 4: Select the Correct Metric

In the metric selector:

Choose:

- * Kubernetes container memory usage

Typical metric:

builtin:kubernetes.container.memory.usage

Step 5: Apply Namespace Filter

- * Add filter: # Kubernetes Namespace = easytrade

This is CRITICAL (without this # wrong answer)

Step 6: Aggregate Data (MOST IMPORTANT STEP)

- * Set: # Aggregation = SUM

This ensures:

All pods memory = ONE combined value

Step 7: Remove Splitting

- * Ensure: # No Split by anything (pod/container/etc.)

If you see multiple lines # YOU DID IT WRONG

Step 8: Choose Visualization

Pick one:

- * # Single value tile (BEST for exam)
- * OR simple graph (no split)

Step 9: Set Timeframe

Top right of dashboard:

Set:

- * Last 30 minutes

Step 10: Save Dashboard

- * Click: # Save

NEW QUESTION # 80

Log files from my application may contain messages with errors. Whenever messages like these occur, we wish to notify support teams to investigate. Which Dynatrace feature would best address this ask?

- A. Log Viewer
- B. Log Processing rules
- C. Log Metrics
- D. Anomaly Detection rules
- E. Log Events

Answer: E

Explanation:

Log Events allow Dynatrace to detect specific patterns (such as error messages) in logs and automatically trigger alerts.

They enable:

- * Detection of error patterns in logs
- * Creation of events/problems
- * Notification of support teams

Reference: Based on official Dynatrace University training materials on log monitoring and alerting.
