Valid 156-836 Mock Exam - 156-836 Valid Vce

156-836 exam dumps at itPass4sure are always kept up to date. Every addition or subtraction of 156-836 exam dumps in the exam syllabus is updated in our brain dumps instantly. Practice on real 156-836 exam dumps and we have provided their answers too for your convenience. If you put just a bit of extra effort, you can score the highest possible score in the Real 156-836 Exam because our 156-836 exam preparation dumps are designed for the best results.

The Check Point Certified Maestro Expert - R81 (CCME) certification exam is a vendor-specific certification exam that measures the candidate's knowledge and skills in deploying and managing Check Point Maestro. 156-836 Exam covers a wide range of topics such as Maestro deployment, network virtualization, security management, troubleshooting, and more.

CheckPoint Check Point Certified Maestro Expert - R81 (CCME) Sample Questions (Q86-Q91):

NEW QUESTION # 86

Splitter cannot be used _____

- A. To connect single port on Appliance to multiple ports on the orchestrator
- B. To connect single port on orchestrator to multiple port on external switch

- C. To connect single port on orchestrator to the same Appliance
- D. To connect single port on orchestrator to multiple Appliances

Answer: C

NEW QUESTION # 87

At a minimum, how many management and Uplink ports does a SG require?

- A. Two of each.
- B. Only one of the two interfaces is needed for the Security Group.
- C. One each.
- D. Neither are required.

Answer: C

Explanation:

A Security Group (SG) requires at least one management port and one uplink port to function properly. The management port is used to connect the SG to the Maestro Hyperscale Orchestrator (MHO) and the customer's management infrastructure, such as SmartConsole or SmartDomain Manager. The uplink port is used to connect the SG to the customer's network infrastructure, such as switches, routers, or firewalls. The uplink port is also used to send and receive traffic from the customer's network to the SG.

NEW QUESTION # 88

When a VPN tunnel is formed with a Maestro SGM,

- A. The receiving SGM makes an encryption decision. The SGM then syncs the traffic to two backup SGMs: one for clear traffic and one for encrypted traffic.
- B. The MHO distributes copies of the packets to two different SGMs because SGM 1 will handle the clear traffic IKE exchange packets, while SGM2 handles encrypted packets.
- C. The MHO handles the IKE before distributing the traffic to a SGM to handle all encrypted traffic. This helps to prevent any issues with the correction layer.
- D. SGM 1 analyzes the policy and topology. If encryption is required, it calculates the tunnel owner's IP address. SGM 1 sends a clear packet to the tunnel owner. SGM 2 is now the connection and tunnel owner.

Answer: D

NEW QUESTION # 89

What command should be used for collecting diagnostic information about the orchestrator?

- A. orch_info
- B. cpview
- C. asg perf -v
- D. cpinfo

Answer: D

Explanation:

Explanation

The cpinfo command is a tool that collects diagnostic information about the orchestrator, such as hardware, software, network, configuration, and logs. The cpinfo command generates a file that can be sent to Check Point Support for analysis and troubleshooting. The cpinfo command can be run on the orchestrator's CLI or WebUI.

NEW QUESTION # 90

Which command do you use to find bottlenecks in the system that are affecting performance, even functionality in some cases?

- A. **asg perf -v**
- B. asg monitor
- C. asg diag verify
- D. asg stat -v

Answer: A

Explanation:

Explanation

The asg perf -v command is used to find bottlenecks in the system that are affecting performance, even functionality in some cases. The asg perf -v command displays the performance statistics of the Security Group Modules (SGMs) in the Security Group, such as throughput, packet rate, CPU utilization, memory usage, and more. The asg perf -v command also shows the distribution mode and the correction rate of each SGM, which can indicate potential issues with asymmetric routing or load balancing. The asg perf -v command can help identify which SGMs are overloaded, underutilized, or misconfigured, and provide insights for troubleshooting and optimization.
