end
```

The exhibit shows the BGP configuration on the hub in a hub-and-spoke topology. The administrator wants BGP to advertise prefixes from spokes to other spokes over the IPsec overlays, including additional paths.

However, when looking at the spoke routing table, the administrator does not see the prefixes from other spokes and the additional paths. Which three settings must the administrator configure inside each BGP neighbor group so spokes can learn the prefixes of other spokes and their additional paths? (Choose three.)

- A. Set additional-path to forward
- B. Enable route-reflector-client.
- C. Enable route-reflector-server
- D. Set adv-additional-path to the number of additional paths to advertise.

- E. Set additional-path to send

Answer: B,D,E

Explanation:

The hub must send additional paths to spokes (set additional-path send).

The hub must treat each spoke as a route-reflector client so spoke routes are reflected to other spokes.

The hub must specify how many additional paths to advertise (set adv-additional-path <n>).

Which two conclusions can you draw from the output shown? (Choose two.)

- A. UDP traffic destined to the subnet 10.22.0.0/24 matches a manual SD-WAN rule.
- B. One SD-WAN rule allows traffic load balancing.
- C. One SD-WAN rule is defined with application categories as the destination.
- D. UDP traffic destined to the subnet 10.22.0.0/24 matches a policy route.

An administrator is testing application steering in SD-WAN. Before generating test traffic, the administrator collected the information shown in the first exhibit. After generating GoToMeeting test traffic, the administrator examined the corresponding traffic log on FortiAnalyzer, which is shown in the second exhibit.

The administrator noticed that the traffic matched the implicit SD-WAN rule, but they expected the traffic to match rule ID 1. Which two reasons explain why some log messages show that the traffic matched the implicit SD-WAN rule?

(Choose two.)

- A. The session 3-tuple did not match any of the existing entries in the ISDB application cache.

- B. No configured SD-WAN rule matches the traffic related to the collaboration application GoToMeeting
- C. FortiGate could not refresh the routing information on the session after the application was detected.
- D. Full SSL inspection is not enabled on the matching firewall policy.

Answer: A,B

### NEW QUESTION # 83

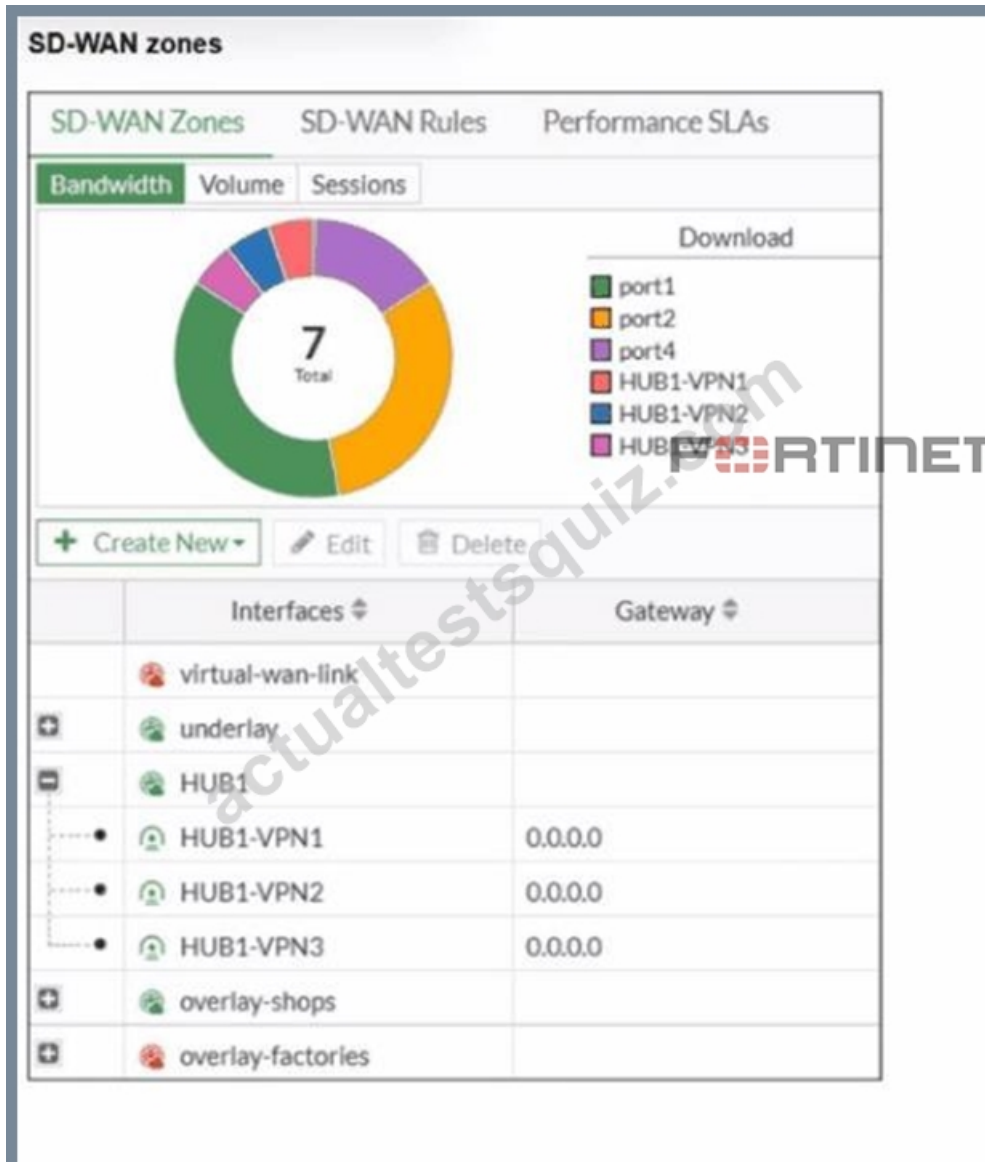

You have a FortiGate configuration with three user-defined SD-WAN zones and two members in each of these zones. One SD-WAN member is no longer in use in health-check and SD-WAN rules. You want to delete it. What happens if you delete the SD-WAN member from the FortiGate GUI?

- A. FortiGate accepts the deletion and places the member in the default SD-WAN zone.
- B. FortiGate displays an error message. SD-WAN zones must contain at least two members
- C. FortiGate displays an error message. You must use the CLI to delete an SD-WAN member.
- D. FortiGate accepts the deletion and removes routes as required.

Answer: D

### NEW QUESTION # 84

Exhibit.

Refer to the exhibit, which shows an SD-WAN zone configuration on the FortiGate GUI. What can you conclude about the zone and member configuration on this device?

- A. The underlay zone contains three members.
- B. You can delete the virtual-wan-link zones.
- **C. You can move HUB1-VPN3 from the HUB1 zone to the overlay-shops zone.**
- D. The overlay-factories zone contains no member.

**Answer: C**
