- B. Generate integrations with preconfigured connectors.
- C. Generate digital assistants.
- D. Generate unit-tests for ABAP classes and CDS views.

Answer: A,D

Exact extracts supporting this:

Generate unit-tests: "New generative AI capabilities are designed to help you write, optimize, and test ABAP code more efficiently."community.sap.com Generate business objects: "The first scope of features will cover business object ..."learning.sap.com "Generative AI for ABAP development. - A. By validating assumptions and deriving logical conclusions from structured relationships
- **B. By disambiguating terms, linking concepts to entities, and grounding user conversations in domain-specific knowledge**
- **C. By connecting data from multiple SAP applications and third-party systems**
- D. By using advanced analytics and machine learning capabilities

Answer: B,C

Explanation:

The SAP Knowledge Graph enhances AI agents by providing context, as detailed in SAP Business AI documentation. It achieves this by connecting data from multiple SAP applications and third-party systems, creating a unified data model that ensures comprehensive insights. Additionally, it supports AI agents by disambiguating terms, linking concepts to entities, and grounding user conversations in domain-specific knowledge, enabling precise and relevant responses. While advanced analytics and machine learning are part of SAP's AI capabilities, they are not specific functions of the Knowledge Graph. Validating assumptions is a broader AI function, not a primary role of the Knowledge Graph. These features make it a critical component for contextual AI.
