Itcertking provides free new ISQI CTAL-TAE latest exam dumps pdf demo to download for your reference so that you will share risk free shopping. Also we encourage every buyer use PayPal payment which also guarantees your money safety. We are engaging in not only providing the highest quality of CTAL-TAE Latest Exam Dumps pdf but also the satisfying customer service. If you have any doubt, we will solve for you until you are satisfied.

ISQI CTAL-TAE Exam is developed and maintained by the International Software Testing Qualifications Board (ISTQB), which is a globally recognized organization that provides certification programs for software testers. The ISTQB ensures that the certification exam meets the highest standards of quality and relevance to the industry. CTAL-TAE exam is available in multiple languages and is recognized by many companies worldwide.

The CTAL-TAE certification exam covers a wide range of topics related to test automation engineering, such as test automation design, implementation and maintenance, test automation frameworks, and scripting languages. CTAL-TAE Exam also tests a candidate's understanding of software testing techniques, test management, and risk-based testing. ISTQB Certified Tester Advanced Level, Test Automation Engineering certification exam is designed to assess a candidate's ability to apply these concepts in real-world scenarios.

Some candidates may purchase our CTAL-TAE software test simulator for their companies. They will ask us how many personal computers our soft version can be install. In fact we have no limit for computer quantity. So if you purchase our CTAL-TAE software test simulator, it supports multi-users at the same time. It can be installed on computers without any limits. If you are a training school, it is suitable for your teachers to present and explain casually. Good CTAL-TAE software test simulator have high passing rate and Itcertking are looking forward to your long-term cooperation.

ISQI ISTQB Certified Tester Advanced Level, Test Automation Engineering Sample Questions (Q80-Q85):

NEW QUESTION # 80

Which of the following is NOT an advantage of test automation?

- A. The ability to find more defects with the same tests, compared to executing the same test manually
- B. The ability to perform tests which would be difficult or impossible to execute manually
- C. The ability to enable a better use of skilled testers by freeing them from repetitive and boring tasks
- D. The ability to run more tests in less time and therefore to make it possible to run them more often

Answer: A

NEW QUESTION # 81

A CI/CD pipeline consists of two phases: build and deployment. The build phase, among other activities, runs automated test cases at the following test levels: Component Testing (CT) and Component Integration Testing (CIT). If the build phase is successful, the deployment phase is started. The deployment phase first provisions the test environment infrastructure needed to deploy the SUT, then deploys the SUT to this environment, and finally triggers another separate pipeline that runs automated test cases at the following test levels: System Testing (ST) and Acceptance Testing (AT). Which of the following statements is TRUE?

- A. Automated test cases for CT-CIT can act as quality gates, while automated test cases for ST-AT cannot act as quality gates
- **B. Both automated test cases for CT-CIT and ST-AT can act as quality gates**
- C. Automated test cases for CT-CIT cannot act as quality gates, while automated test cases for ST-AT can act as quality gates
- D. Neither automated test cases for CT-CIT nor automated test cases for ST-AT can act as quality gates

Answer: B

Explanation:

TAE describes quality gates as defined checkpoints in pipelines where objective criteria determine whether the pipeline may proceed (e.g., thresholds, pass/fail rules, coverage, or risk-based acceptance). Automated tests at multiple levels can serve as such gates. In the build phase, CT and CIT are commonly used as strong, fast quality gates because they provide quick feedback on code correctness and integration of closely related components; failures typically block promotion. In the deployment phase, after provisioning and deploying into a test environment, automated System Testing and Acceptance Testing can also serve as quality gates for promoting a build to later stages or release candidates, especially when the organization relies on automated regression and automated acceptance criteria for release decisions. While ST/AT may take longer and may be more prone to environmental factors, TAE still supports using them as gates when they are sufficiently stable, relevant, and aligned with release risk. The scenario explicitly places ST/AT in a separate triggered pipeline, which still qualifies as a gating mechanism if downstream promotion depends on its outcome. Therefore, both CT-CIT and ST-AT can act as quality gates.

NEW QUESTION # 82

Assume that you are the TAE responsible for the correct functioning of a TAS, deployed in a test environment that consists of a few machines running the same version of the operating system. The TAS has been working and stable since its deployment, it has been used to run an automated test suite consisting of many similar automated test. The infrastructure team is planning to update the operating system on these machines by installing a new the service pack for security reasons. Since the vendor of the operating system assurance full backward compatibility, the infrastructure team assurance that there will be no impacts on the functioning of the TAS.

What is the BEST approach to confirm the correct functioning of the TAS in this scenario?

- A. Do not run any tests because you can immediately confirm the correct functioning of the automated test suite
- B. Make sure that the infrastructure team has completed installing the service pack on the machines where SUT is running, then run the whole automated test suite to verify its behavior
- C. Verify the behavior of the whole automated test suite by running all the automated tests
- **D. Verify the behavior of the automated tests by running a small tests, then gradually run the remaining tests to confirm the correct functioning of the whole automated test suite.**

Answer: D

NEW QUESTION # 83

What is NOT a factor in considering when you are asked to ensure an effective transition from manual to automated tests?

- **A. The controllability of the SUT**
- B. Complexity to automate the manual test cases
- C. The look and feel of the SUT
- D. Correctness of test data and test cases

Answer: A

NEW QUESTION # 84

Some automated regression test scripts run by a TAS in a given test environment make calls to private APIs that require authentication for all requests (the authentication method is the same for all APIs). The SUT is a business-critical system. The following two changes are planned: a change in the authentication method of all APIs and a minor upgrade of the OS (Operating System) in the test environment. You have updated the test scripts to cope with the change in the API authentication method. Which of the following sequences of activities is BEST to ensure that the test scripts are not adversely affected by these changes?

- A. First upgrade the OS, then implement the change in the API authentication method, and finally run all the updated test scripts
- B. Implement one change at a time and run a subset of the updated test scripts after each change
- C. First implement the change in the API authentication method, then upgrade the OS, and finally run all the updated test scripts
- **D. Implement one change at a time and run a subset of the updated test scripts after each change, and finally run all the updated test scripts**

Answer: D

Explanation:

TAE recommends controlled change management to isolate causes when multiple changes are introduced.

When you apply more than one change at once, diagnosing failures becomes harder because you cannot easily attribute effects to a specific change. The best practice is to implement changes incrementally, validating automation and system behavior after each change using a representative subset of tests (e.g., smoke/build verification or targeted regression) to quickly detect issues. Because the system is business-critical, risk mitigation is stronger: you want early detection and clear attribution. After each change is validated with a subset, you then execute the full updated regression suite to ensure overall coverage and confidence. Options A and C apply two changes before running tests, which reduces diagnostic clarity and increases the risk of late discovery. Option D describes incremental changes with subset testing but omits the final full-suite run, which TAE would recommend to ensure broad coverage after all changes have been applied. Therefore, the best sequence is: change one item, run a subset, repeat for the next change, then run all updated scripts.

NEW QUESTION # 85

.....

Nowadays most people are attracted to the ISTQB Certified Tester Advanced Level, Test Automation Engineering (CTAL-TAE) certification and take it seriously because they know that it is the future. But they can't figure out where to prepare for ISTQB Certified Tester Advanced Level, Test Automation Engineering (CTAL-TAE) certification exam. After observing the problems of the students Itcertking provides them with the best ISTQB Certified Tester Advanced Level, Test Automation Engineering (CTAL-TAE) Questions so they don't get depressed anymore and pass the ISTQB Certified Tester Advanced Level, Test Automation Engineering (CTAL-TAE) exam on the first try. The ISTQB Certified Tester Advanced Level, Test Automation Engineering (CTAL-TAE) is designed after consulting with a lot of professionals and getting their reviews.
