As long as you are willing to trust our Platform-App-Builder preparation materials, you are bound to get the certificate.

Salesforce Platform-App-Builder Certification is recognized globally and is highly valued by employers. Individuals who hold this certification are in high demand and can expect to earn higher salaries than their non-certified counterparts. In addition, this certification provides individuals with a competitive advantage in the job market, as it demonstrates their expertise and commitment to the Salesforce platform.

Salesforce Certified Platform App Builder Sample Questions (Q213-Q218):

NEW QUESTION # 213

At Ursa Solar Major, only users with the Outer Planets profile need to see the Jupiter field on the Solar System object. How should the app builder satisfy this requirement?

- A. Filtered view
- B. Sharing rules
- C. Classic encryption
- **D. Field-level security**

Answer: D

NEW QUESTION # 214

Cloud Kicks is redefining its entire business process to convert the Manager Notes field from a long text area field. The goal is to encourage managers to be more concise in their comments and stay at 255 characters or less. There is preexisting information in the Manager Notes field that often is well beyond the character limit.

What would happen to any existing information if the app builder tries to convert a preexisting long text area field to text area?

- **A. Preexisting information will remain even if it was over 255 characters.**
- B. Preexisting information in the field will be completely lost.
- C. Preexisting information will truncate to the first 255 characters.
- D. Preexisting information will cause an error message to pop up.

Answer: A

Explanation:

Explanation

Preexisting information will remain even if it was over 255 characters if the app builder tries to convert a preexisting long text area field to text area. However, users will not be able to edit or save records with more than 255 characters in that field until they reduce the number of characters. Preexisting information will not truncate, be lost, or cause an error message.

NEW QUESTION # 215

Cloud Kicks has three types of customer support processes: Platinum, Diamond, and Bronze. The app builder created separate record types for each process on the Case object. The customer support team should be unable to create new cases with the Bronze record type.

How should this requirement be met?

- **A. Update the support team profile to remove the Bronze record type.**
- B. Create permission set group for Case that includes Platinum and Diamond record types.
- C. Update the organization-wide defaults to private for Case.
- D. Make the record type hidden to support users; update sharing roles to private.

Answer: A

Explanation:

Explanation

The solution that should meet this requirement is updating the support team profile to remove the Bronze record type. This way, the support team users will not be able to create new cases with the Bronze record type, as it will not appear in their record type selection list. Option A is incorrect because updating the organization-wide defaults to private for Case does not affect the record

type availability, but rather the record access level. Option C is incorrect because creating permission set group for Case that includes Platinum and Diamond record types does not prevent the support team users from creating new cases with the Bronze record type, as they may still have access to it through their profile. Option D is incorrect because making the record type hidden to support users and updating sharing roles to private does not prevent the support team users from creating new cases with the Bronze record type, as they may still have access to it through their profile.

NEW QUESTION # 216

What Lightning Experience feature allows Salesforce users to modify existing records without opening them?

- A. The edit option in the Favorites menu
- **B. Inline editing in List Views**
- C. Global Actions
- D. Editable Reports

Answer: B

NEW QUESTION # 217

Cloud Kicks has five years of sales data and would like to track when customers made their first purchase. How should an app builder use a roll-up summary to meet the requirements?

- A. Create a new roll-up summary field called First Order Date, using Type SUM on Opportunity Close Date.
- B. Create a new date field called First Order Date, then create a roll-up summary to update the field using Type MIN.
- **C. Create a new roll-up summary field called First Order Date, using Type MIN on the Opportunity Close Date with a filter where IsWon = TRUE.**
- D. Create a new date field called First Order Date, create a new Workflow to set the date, and roll up the value with a filter where IsWon = TRUE.

Answer: C

NEW QUESTION # 218
