

# Reliable GES-C01 Test Question | GES-C01 Valid Vce

2026 Latest TestkingPass GES-C01 PDF Dumps and GES-C01 Exam Engine Free Share: [https://drive.google.com/open?id=1Z-qEVCmflgwhFT-2fJR8WzoV7\\_jgtCoF](https://drive.google.com/open?id=1Z-qEVCmflgwhFT-2fJR8WzoV7_jgtCoF)

It is known to us that time is money, and all people hope that they can spend less time on the pass. We are happy to tell you that The SnowPro® Specialty: Gen AI Certification Exam exam questions from our company will help you save time. With meticulous care design, our study materials will help all customers pass their exam in a shortest time. If you buy the GES-C01 Study Materials from our company, you just need to spend less than 30 hours on preparing for your exam, and then you can start to take the exam. We believe that you will pass your exam and get the related certification with GES-C01 study dump.

We always adhere to the principle of “mutual development and benefit”, and we believe our GES-C01 practice materials can give you a timely and effective helping hand whenever you need in the process of learning our GES-C01 study braindumps. For we have been in this career over ten years and we are good at tracing the changes of the GES-C01 guide prep in time and update our exam dumps fast and accurately.

## Get Updated Reliable GES-C01 Test Question and Newest GES-C01 Valid Vce

Many customers may doubt the quality of our Snowflake GES-C01 learning quiz since they haven't tried them. But our GES-C01 training engine is reliable. What you have learnt on our SnowPro® Specialty: Gen AI Certification Exam GES-C01 Exam Materials are going through special selection. The core knowledge of the real exam is significant.

### **Snowflake SnowPro® Specialty: Gen AI Certification Exam Sample Questions (Q277-Q282):**

#### **NEW QUESTION # 277**

A data engineering team is setting up a Retrieval Augmented Generation (RAG) application using Snowflake Cortex Search to provide contextual answers from customer support transcripts. The transcripts are stored in a Snowflake table named SUPPORT\_TRANSCRIPTS. Which of the following statements are crucial considerations or accurate facts regarding the initial

setup and configuration of the Cortex Search Service for this use case?

- A. Cortex Search is designed to get users up and running quickly with a hybrid (vector and keyword) search engine on text data, handling embedding, infrastructure maintenance, and search quality parameter tuning automatically.
- B. The CREATE CORTEX SEARCH SERVICE command requires that CHANGE\_TRACKING = TRUE be enabled on the source table, especially if the role creating the service is not the table owner. This ensures that the service can track updates to the base data.
- C. Columns specified in the ATTRIBUTES field during service creation are only used for filtering search results and do not need to be present in the source query.
- D. Snowflake recommends using a dedicated virtual warehouse of any size, including X-Large or 2X-Large, for each Cortex Search Service to ensure the fastest possible materialization of search indexes during creation and refresh.
- E. Cortex Search Services currently support replication and cloning, allowing for easy disaster recovery and geographical distribution of the search index.

**Answer: A,B**

Explanation:

Option A is correct because change tracking is required for the Cortex Search Service to monitor updates to the base table, particularly if the service creator is not the table owner. Option B is incorrect; Snowflake recommends using a dedicated warehouse no larger than MEDIUM for each service, as larger warehouses do not necessarily increase performance for index materialization. Option C is incorrect because columns in the ATTRIBUTES field must be included in the source query. Option D is correct as Cortex Search provides a low-latency, high-quality hybrid (vector and keyword) search engine that automatically manages embedding, infrastructure, and search quality tuning. Option E is incorrect because Cortex Search Services currently do not support replication or cloning.

#### NEW QUESTION # 278

□

- A. □
- B. □
- C. □
- D. □
- E. □

**Answer: B**

Explanation:

While the database role provides broad access to Document AI features and the ability to work on model builds, creating pipeline components like streams and tasks requires specific object privileges on the relevant database objects. For creating a task, the 'CREATE TASK' privilege on the schema where the task is being created is explicitly required. Option A (CREATE DATABASE) is a much higher-level privilege and not directly relevant to task creation within an existing schema. Option B ('USAGE' on warehouse) is necessary for the task to using that warehouse, but not for the 'CREATE TASK' statement itself to succeed. Option C (EXECUTE IMMEDIATE) is not a standard privilege for creating tasks. Option E ('ALTER STAGE') is for modifying stage properties, not for creating tasks.

#### NEW QUESTION # 279

A data science team is planning to implement a new RAG (Retrieval Augmented Generation) application using Snowflake Cortex, specifically leveraging Cortex Search. They are evaluating the key features, best practices, and cost considerations associated with Cortex Search. Which of the following statements accurately describe aspects of Cortex Search?

- A. The credit cost for Cortex Search Services is primarily based on the number of queries executed against the service, not the amount of indexed data.
- B. Cortex Search supports only English-only embedding models; multilingual RAG applications require external embedding solutions.
- C. For best search results, Snowflake recommends splitting text in the search column into chunks of no more than 512 tokens, even when longer-context embedding models are available.
- D. Cortex Search automatically handles embedding, infrastructure maintenance, and ongoing index refreshes, and can be used as a backend for enterprise search or a RAG engine for LLM chatbots.
- E. Cortex Search Services require a virtual warehouse for initial setup and subsequent refreshes to run queries against base objects and build the search index.

**Answer: C,D,E**

Explanation:

Option A is correct. Cortex Search provides low-latency, high-quality 'fuzzy' search and handles embedding, infrastructure maintenance, search quality parameter tuning, and ongoing index refreshes. Its primary use cases are as a RAG engine for LLM chatbots and as a backend for enterprise search. Option B is incorrect. Cortex Search Services incur costs based on the amount of indexed data (6.3 Credits per GB/mo of indexed data), not solely on the number of queries executed. Option C is incorrect. Cortex Search offers multilingual embedding models like 'snowflake-arctic-embed-l-v2.ff' and 'voyage-multilingual-2', supporting multilingual AI workflows. Option D is correct. Snowflake recommends splitting text into chunks of no more than 512 tokens for optimal search results, as smaller chunks can lead to more precise retrieval and higher-quality LLM responses in RAG scenarios, even with models that support longer context windows. Option E is correct. A virtual warehouse is required for Cortex Search Service to refresh the service, which includes running queries against base objects, orchestrating text embedding jobs, and building the search index.

#### NEW QUESTION # 280

A data scientist is preparing to log a custom PyCaret classification model into the Snowflake Model Registry. The goal is to deploy this model on Snowpark Container Services (SPCS) for scalable inference. The PyCaret model relies on the 'pycaret' and 'scipy' Python libraries, and the data scientist has local 'sample data.csv' for inferring the model's signature. Which statements are crucial for successfully logging this custom model for eventual SPCS deployment?

- A. Option D
- B. Option E
- C. Option A
- **D. Option B**
- **E. Option C**

**Answer: D,E**

Explanation:

Option B is correct because for models deployed to Snowpark Container Services, dependencies are typically obtained from 'conda-forge' or PyPI. Therefore, 'pip\_requirements' is the appropriate way to specify PyPI packages, and explicitly setting 'SNOWPARK\_CONTAINER\_SERVICEST' guides the deployment target. Option C is correct because either (a Pandas or Snowpark DataFrame) or a model 'signature' must be provided to the method for input validation and to infer the model's input signature. Option A is incorrect because 'conda\_dependencies' in 'log\_model' assumes the Snowflake channel for warehouse deployment, whereas for SPCS, it's 'conda-forge' or PyPI. Mixing channels or assuming Snowflake channel for SPCS is incorrect. Option D is incorrect. The 'use\_gpu' option is used when 'loading' a model version `Cmv.load(options={'use_gpu': to enable GPU-specific loading logic, not when logging the model. GPU requests for inference are specified when creating the service. Option E is incorrect. Snowflake recommends using only 'conda_dependencies' or 'pip_requirements', not both, to avoid potential compatibility issues during the container image build.`

#### NEW QUESTION # 281

After resolving this, they try to process a batch of 1500 documents in a single query using the method, which also fails. Which two issues are most likely contributing to these failures?

- A. The virtual warehouse being used for Document AI is not a Snowpark-optimized warehouse.
- B. The user has not been granted the 'CREATE STREAM' privilege on the schema.
- **C. The 'SNOWFLAKE.DOCUMENT INTELLIGENCE CREATOR' database role or the 'CREATE SNOWFLAKE.ML.DOCUMENT INTELLIGENCE' privilege on the schema has not been granted to the user.**
- D. The name is not unique within the schema.
- **E. The batch of documents exceeds Document AI's limit of 1000 documents per query.**

**Answer: C,E**

Explanation:

The initial error, 'Unable to create a build on the specified database and schema,' is a documented message that can occur if the 'CREATE SNOWFLAKE.ML.DOCUMENT INTELLIGENCE' privilege is not granted to the role, or if the database role is missing. Thus, option B is a direct and likely cause for the first failure. After resolving this (meaning the model build was successfully created), the subsequent failure to process 1500 documents in a single query is due to Document AI's limitation of processing a maximum of 1000 documents per query. Therefore, option D correctly identifies the second contributing factor. Option A (CREATE STREAM privilege) is relevant for creating pipelines but not for the initial model build or predicting. Option C (duplicate

model build name) is another possible cause for the first error, but the question asks for the 'most likely' issues across two distinct failures, making B a more fundamental access control issue for creation and D a clear limit for processing. Option E (Snowpark-optimized warehouse) is not a specific requirement or a known cause for these types of errors; an X-Small, Small, or Medium warehouse is generally recommended, and scaling up does not increase processing speed.

## NEW QUESTION # 282

.....

There are some prominent features that are making the Snowflake GES-C01 exam dumps the first choice of GES-C01 certification exam candidates. The prominent features are real and verified GES-C01 exam questions, availability of Snowflake GES-C01 exam dumps in three different formats, affordable price, 1 year free updated GES-C01 Exam Questions download facility, and 100 percent Snowflake GES-C01 exam passing money back guarantee. We are quite confident that all these GES-C01 exam dumps feature you will not find anywhere.

**GES-C01 Valid Vce:** <https://www.testkingpass.com/GES-C01-testking-dumps.html>

In summary we want to point out that getting is a professional GES-C01 Valid Vce - SnowPro® Specialty: Gen AI Certification Exam exam certification is the most efficient way for you to evaluate yourself, and companies choose their employees not only by your education background, but also your professional skill, Here, GES-C01 updated training vce is really worthwhile for your preparation, You may feel astonished and doubtful about this figure; but we do make our GES-C01 exam dumps well received by most customers.

The Appearance screen, Redirecting a Host to a Better GES-C01 Valid Vce Next Hop, In summary we want to point out that getting is a professional SnowPro® Specialty: Gen AI Certification Exam exam certification is the most efficient way for you to evaluate yourself, and GES-C01 companies choose their employees not only by your education background, but also your professional skill.

## The latest Snowflake Certification GES-C01 exam training methods

Here, GES-C01 updated training vce is really worthwhile for your preparation, You may feel astonished and doubtful about this figure; but we do make our GES-C01 exam dumps well received by most customers.

To pass the GES-C01 test, you need to prepare well from updated practice material such as real Snowflake GES-C01 Exam Questions, For GES-C01 training materials, we also have after-service, if you have questions about the exam dumps, you can contact us by email.
