C_ACDET_2506 Updated Questions – Fulfill Your Dream of Becoming SAP Certified

All of our considerate designs have a strong practicability. We are still researching on adding more useful buttons on our C_ACDET_2506 test answers. The aim of our design is to improve your learning and all of the functions of our products are completely real. Then the learning plan of the C_ACDET_2506 Exam Torrent can be arranged reasonably. You need to pay great attention to the questions that you make lots of mistakes. If you are interested in our products, click to purchase and all of the functions. Try to believe us and give our C_ACDET_2506 exam guides a chance to certify.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q31-Q36):

NEW QUESTION # 31

While working on editing a field for a customer, you notice that "Editable in full Contract Amendment" is not an option available in the advanced tab of field configuration. What is likely the cause for this behavior?
(Select 2 correct answers)

- A. The contract must be in an amendment state for this option to be visible in customizing.
- B. A customization is in flight and needs to be cleared and reset prior to making this change.
- C. The field you are customizing is standard and therefore cannot be changed.
- D. The field you are customizing is not in the contract workspace or request classes.

Answer: A,D

Explanation:

The "Editable in full Contract Amendment" option in SAP Ariba is available only when the contract is in an amendment status, meaning this option appears contextually when the contract supports amendment workflows. If the contract is not in amendment state, the option remains hidden (A).

Additionally, this option is only relevant for fields that belong to the Contract Workspace or Request field classes; fields outside these classes will not show amendment-specific editability options (C).

The presence or absence of this option is not related to ongoing customizations needing reset (B), nor is it restricted solely to custom or standard fields (D), as standard fields can also have this option if class-applicable.

NEW QUESTION # 32

Which of the following applies in a greenfield deployment scenario when migrating configurations from your test site?

- A. If any configuration type fails during the migration process, you cannot create a new migration request.
- B. You can revert migrated configurations from the target site.
- C. The status changes to Complete when migration is finished.
- D. You cannot make other configuration updates in ICM when a migration operation is in progress.

Answer: C,D

NEW QUESTION # 33

You can choose multiple field configurations and migrate them to the production site by creating a package in your test site. Which of the following steps should be included? Note: There are 3 correct answers to this question.

- A. The Flex Master Data (FMD) templates must be defined and their data should be loaded in the production site before migrating FMD custom fields.
- B. Publish the form template within the test site in order to add the form fields in the package.
- C. If you are migrating fields that are associated with enumerations, you should load those enumerations in the production site before migrating the fields.
- D. Make sure you update the string resource files in the production site before migrating the corresponding field configurations from test to production site.
- E. Discard any other packages that appear in My Action Items.

Answer: A,C,D

NEW QUESTION # 34

Which of the following master data types requires manual migration from Test to Production in a Greenfield migration?

- A. Translations
- B. Clause Library
- C. Enumerations
- D. Relations and relation entries

Answer: C

Explanation:

In SAP Ariba Greenfield deployments, Enumerations (picklist value lists) require manual migration because they are not included in

Intelligent Configuration Manager (ICM) bundles. Enumerations must be manually exported from Test and imported into Production to ensure correct picklist values for fields that depend on them.

Other master data types like Clause Library and Relations can be migrated using standard migration tools or processes. Translations are handled via AML & Translations Upload.

Ensuring enumerations are migrated correctly is critical because missing or inconsistent enumerations can cause field validation errors and disrupt system usage.

NEW QUESTION # 35

Which of the following classes are NOT frequently customized in SAP Ariba Strategic Sourcing solutions?

- A. ContractWorkspace
- B. ExtendedAddressRep
- C. SourcingProject
- D. AbstractDocument

Answer: B

NEW QUESTION # 36
