Our FCSS_NST_SE-7.4 test questions are available in three versions, including PDF versions, PC versions, and APP online versions. And FCSS_NST_SE-7.4 test material users can choose according to their own preferences. The most popular version is the PDF version of FCSS_NST_SE-7.4 exam prep. The PDF version of FCSS_NST_SE-7.4 test questions can be printed out to facilitate your learning anytime, anywhere, as well as your own priorities. The PC version of FCSS_NST_SE-7.4 Exam Prep is for Windows users. If you use the APP online version, just download the application program, you can enjoy our FCSS_NST_SE-7.4 test material service.

Fortinet FCSS_NST_SE-7.4 Exam Syllabus Topics:

| Topic | Details |
|---------|--|
| Topic 1 | <ul style="list-style-type: none"> Authentication: This section evaluates the proficiency of Fortinet network and security professionals in resolving both local and remote authentication issues. |
| Topic 2 | <ul style="list-style-type: none"> System Troubleshooting: This part of the exam assesses the ability of Fortinet network and security professionals to diagnose and fix typical system-related problems within Fortinet solutions. It involves troubleshooting FortiGate-to-FortiGate Security Fabric issues, addressing automation stitch concerns, and detecting resource-related problems using integrated tools. |
| Topic 3 | <ul style="list-style-type: none"> VPN: This section tests the knowledge of IT professionals, such as system engineers in diagnosing and resolving VPN-related issues. It emphasizes troubleshooting IPsec IKE versions 1 and 2 to ensure secure and reliable communication between networks or remote users. |
| Topic 4 | <ul style="list-style-type: none"> Routing: This part of the exam examines the expertise of Fortinet network and security professionals, in routing enterprise traffic effectively. |
| Topic 5 | <ul style="list-style-type: none"> Security Profiles: This segment of the exam tests the skills of IT professionals, such as network administrators in handling and troubleshooting security profile-related challenges. |

Pdf FCSS_NST_SE-7.4 Dumps - Relevant FCSS_NST_SE-7.4 Exam Dumps

Everyone is not willing to fall behind, but very few people take the initiative to change their situation. Take time to make a change

and you will surely do it. Our FCSS_NST_SE-7.4 actual test guide can give you some help. Our company aims to help ease the pressure on you to prepare for the FCSS_NST_SE-7.4 exam and eventually get a certificate. Obtaining a certificate is equivalent to having a promising future and good professional development. Our FCSS_NST_SE-7.4 Study Materials have a good reputation in the international community and the quality of our FCSS_NST_SE-7.4 study guide is guaranteed.

Fortinet FCSS - Network Security 7.4 Support Engineer Sample Questions (Q24-Q29):

NEW QUESTION # 24

Which of the following regarding protocol states is true?

- A. proto_state=10 indicates an established TCP session.
- **B. proto_state=01 indicates an established TCP session.**
- C. proto_state=01 indicates one-way ICMP traffic.
- D. proto_state=00 indicates that UDP traffic flows in both directions.

Answer: B

Explanation:

The proto_state field is actually a two bit bitmask where the bits track seen packet directions, but for TCP FortiGate only flips into 01 once the three way handshake completes and the session is fully established. UDP sessions never set those bits (they stay at 00), and ICMP uses its own state machine. Seeing proto_state=01 in a TCP session listing always means that the TCP handshake has finished and the session is established.

NEW QUESTION # 25

Refer to the exhibits.

An administrator is attempting to advertise the network configured on port3. However, FGT-A is not receiving the prefix. Which two actions can the administrator take to fix this problem? (Choose two.)

- A. Restart BGP using a soft reset to force both peers to exchange their complete BGP routing tables.
- **B. Use the set network-import-check disable command.**
- C. Manually add the BGP route on FGT-A.
- **D. Modify the prefix using the network command from 172.16.0.0/16 to 172.16.54.0/24.**

Answer: B,D

NEW QUESTION # 26

Refer to the exhibit, which shows a partial output of the fssod daemon real-time debug command.

What two conclusions can you draw from the output? (Choose two.)

- A. The logon event can be seen on the collector agent installed on Windows.
- **B. FSSO is using agentless polling mode to detect logon events.**
- **C. The workstation with IP 10.124.2.90 will be polled frequently using TCP port 445 to see if the user is still logged on.**
- D. FSSO is using DC agent mode to detect logon events.

Answer: B,C

NEW QUESTION # 27

Refer to the exhibit, which shows a partial output of the real-time LDAP debug.

What two actions can the administrator take to resolve this issue? (Choose two.)

- A. Ensure the user logs in using 'John Smith' not 'jsmith'.
- **B. Ensure the account is active.**
- **C. Ensure the user is a member of at least one AD group to ensure step 4 of the LDAP authentication process is successful.**
- D. Ensure the user is providing the correct user credentials.

Answer: B,C

Explanation:

When FortiGate's LDAP authentication can't find any matching DN it reports "get all dn - found no DN," which usually means the user either isn't in the group(s) you've told FortiGate to check or the account isn't currently active.

Ensure the user is a member of at least one AD group.

If you've configured FortiGate to restrict logins to specific groups, any user not in one of those groups will simply never be found by the LDAP search.

Ensure the account is active.

FortiGate's default search filter excludes disabled or locked accounts, so a disabled user object will likewise never show up in the DN search.

NEW QUESTION # 28

What are two reasons that an OSPF router does not have any type 5 link-state advertisements (LSAs) in its link-state database (LSDB)? (Choose two.)

- A. The peer of the local router is using a prefix-list-outconfiguration to prevent all type 5 LSAs to be advertised.
- B. There is no autonomous system border router (ASBR) in the network.
- C. The local router is located in a stub area.
- D. IP protocol 89 is blocked between the local router and its peer.

Answer: B,C

Explanation:

The local router is located in a stub area.

Stub areas suppress Type 5 LSAs, so none appear in the LSDB.

There is no autonomous system border router (ASBR) in the network.

Without an ASBR there are no external routes to advertise, so no Type 5 LSAs are ever generated.

NEW QUESTION # 29
