PT0-003 Test Score Report | Exam PT0-003 Simulations

DOWNLOAD the newest DumpStillValid PT0-003 PDF dumps from Cloud Storage for free: https://drive.google.com/open?id=1PybbIzv7zaxHnilJh6z5RCO0yQnSlpD9

If you really intend to pass the PT0-003 exam, our software will provide you the fast and convenient learning and you will get the best study materials and get a very good preparation for the exam. The content of the PT0-003 guide torrent is easy to be mastered and has simplified the important information. What's more, our PT0-003 prep torrent conveys more important information with less questions and answers. The learning is relaxed and highly efficiently.

Our CompTIA PenTest+ Exam exam questions are designed by a reliable and reputable company and our company has rich experience in doing research about the study materials. We can make sure that all employees in our company have wide experience and advanced technologies in designing the PT0-003 study dump. So a growing number of the people have used our study materials in the past years, and it has been a generally acknowledged fact that the quality of the PT0-003 Test Guide from our company is best in the study materials market. Now we would like to share the advantages of our PT0-003 study dump to you, we hope you can spend several minutes on reading our introduction; you will benefit a lot from it.

PT0-003 Test Score Report 100% Pass | Professional PT0-003: CompTIA PenTest+ Exam 100% Pass

The pass rate is 98% for PT0-003 exam bootcamp, and if you choose us, we can ensure you that you can pass the exam and obtain the certification successfully. In addition, PT0-003 exam materials are edited by professional experts, therefore they are high-quality, and you can improve your efficiency by using PT0-003 Exam brainidumps of us. We offer you free demo to have a try before buying PT0-003 training materials, so that you can know what the complete version is like. We have online and offline chat service for PT0-003 training materials, and if you have any questions, you can consult us.

CompTIA PenTest+ Exam Sample Questions (Q80-Q85):

NEW QUESTION # 80
During an assessment, a penetration tester emailed the following Python script to CompTIA's employees:
import pyHook, sys, logging, pythoncom, datetime
log_file='C:\\Windows\\Temp\\log_comptia.txt' def KbrdEvent(event):
logging.basicConfig(filename=log_file,level=logging.DEBUG, format='%(messages)s') chr(event.Ascii) logging.log(10, chr(event.Ascii)) return True hooks_manager = pyHook.HookManager() hooks_manager.KeyDown = KbrdEvent hooks_manager.HookKeyboard() pythoncom.PumpMessages() Which of the following is the intended effect of this script?

- A. Keylogging
- B. Collecting logs
- C. Debugging an exploit
- D. Scheduling tasks

Answer: A

Explanation:
The provided Python script is designed to function as a keylogger, which is a type of surveillance software that has the capability to record every keystroke made on a computer. The script uses the pyHook library to hook into and monitor all keyboard events. When a key is pressed, the KbrdEvent function is triggered, which logs the ASCII value of the pressed key to a file named log_comptia.txt located in C:\\Windows\\Temp. The script is configured to continuously monitor keyboard events and log them, making its intended effect keylogging, rather than debugging an exploit, collecting logs in a general sense, or scheduling tasks.

NEW QUESTION # 81
A penetration tester writes the following script:
Which of the following is the tester performing?

- A. Trying to recover a lost bind shell
- B. Searching for service vulnerabilities
- C. Scanning a network for specific open ports
- D. Building a reverse shell listening on specified ports

Answer: C

Explanation:
-z zero-I/O mode [used for scanning]
-v verbose
example output of script:
10.0.0.1: inverse host lookup failed: Unknown host
(UNKNOWN) [10.0.0.1] 22 (ssh) open
(UNKNOWN) [10.0.0.1] 23 (telnet) : Connection timed out
https://unix.stackexchange.com/questions/589561/what-is-nc-z-used-for

NEW QUESTION # 82
A penetration tester writes the following script to enumerate a /24 network:
1 #!/bin/bash
2 for i in {1..254}
3 ping -c1 192.168.1.$i
4 done
The tester executes the script, but it fails with the following error:
-bash: syntax error near unexpected token 'ping'
Which of the following should the tester do to fix the error?

- A. Replace bash with zsh
- B. Add do after line 2
- C. Replace {1..254} with $(seq 1 254)
- D. Replace $i with ${i}

Answer: B

Explanation:
The missing do keyword is the reason for the syntax error. Bash for loops must include a do statement before executing commands within the loop.
Corrected script:
#!/bin/bash
for i in {1..254}; do
ping -c1 192.168.1.$i
done
From the CompTIA PenTest+ PT0-003 Official Study Guide (Chapter 4 - Scanning and Enumeration):
"In Bash scripting, control structures like for-loops require correct syntax, including the 'do' keyword for loop logic to execute properly." Reference: Chapter 4, CompTIA PenTest+ PT0-003 Official Study Guide

NEW QUESTION # 83

A penetration tester writes the following script to enumerate a /24 network:
1 #!/bin/bash
2 for i in {1..254}
3 ping -c1 192.168.1.$i
4 done
The tester executes the script, but it fails with the following error:
-bash: syntax error near unexpected token 'ping'
Which of the following should the tester do to fix the error?

- A. Replace bash with zsh
- B. Replace {1..254} with $(seq 1 254)
- C. Add do after line 2
- D. Replace $i with ${i}

Answer: B

Explanation:
The missing do keyword is the reason for the syntax error. Bash for loops must include a do statement before executing commands within the loop.
Corrected script:
#!/bin/bash
for i in {1..254}; do
ping -c1 192.168.1.$i
done
From the CompTIA PenTest+ PT0-003 Official Study Guide (Chapter 4 - Scanning and Enumeration):
"In Bash scripting, control structures like for-loops require correct syntax, including the 'do' keyword for loop logic to execute properly."

NEW QUESTION # 84
A penetration tester issues the following command after obtaining a low-privilege reverse shell: wmic service get name,pathname,startmode Which of the following is the most likely reason the penetration tester ran this command?

- A. To find services that have unquoted service paths
- B. To search for passwords in the service directory
- C. To register a service to run as System
- D. To list scheduled tasks that may be exploitable

Answer: A

Explanation:
The command wmic service get name,pathname,startmode is used by penetration testers to enumerate services and their configurations, specifically looking for services with unquoted paths. If a service's path contains spaces and is not enclosed in quotes, it can be exploited by placing a malicious executable along the path, leading to privilege escalation. For example, if the service path is C:\Program Files\My Service\service.exe and is unquoted, an attacker could place a malicious Program.exe in C:\, which would then be executed with the same privileges as the service when the service starts. Identifying such services allows penetration testers to highlight potential security risks that could be exploited for privilege escalation.

NEW QUESTION # 85
