## Similar features as the desktop-based SAP C-ABAPD-2507 practice test

When we are in some kind of learning web site, often feel dazzling, because web page design is not reasonable, put too much information all rush, it will appear desultory. Absorbing the lessons of the C-ABAPD-2507 test prep, will be all kinds of qualification examination classify layout, at the same time on the front page of the C-ABAPD-2507 test materials have clear test module classification, so clear page design greatly convenient for the users, can let users in a very short period of time to find what they want to study, and then targeted to study. Saving the precious time users already so, also makes the C-ABAPD-2507 Quiz torrent look more rich, powerful strengthened the practicability of the products, to meet the needs of more users, to make the C-ABAPD-2507 test prep stand out in many similar products.

## SAP Certified Associate - Back-End Developer - ABAP Cloud Sample Questions (Q74-Q79):

#### NEW QUESTION # 74

You want to define the following CDDS view entity with an input parameter:

\* define view entity Z\_CONVERT

\* with parameters i\_currency : ???

Which of the following can you use to replace "???"? Note: There are 2 correct answers to this question.

- A. A built-in ABAP Dictionary type
- B. A data element
- C. A component of an ABAP Dictionary structure
- D. A built-in ABAP type

**Answer: A,B**

#### NEW QUESTION # 75

In what order are objects created to generate a RESTful Application Programming application?

□

- A. Database table
- B. Data model view
- C. Service definition
- D. Service binding
- E. Projection view

**Answer: A,B,C,D,E**

#### NEW QUESTION # 76

Which statements apply to the TRY-ENDTRY construct? (Select 3 correct answers)

- A. CATCH clauses should be organized ascending from most specific to most general.
- B. A CATCH clause can be used as a handler for several exception classes.
- C. A superclass in a CATCH clause catches exceptions of itself and of its subclasses.
- D. All matching CATCH clauses are always executed.
- E. A CLEANUP clause catches remaining exceptions.

**Answer: A,B,C**

Explanation:

Comprehensive and Detailed Explanation from Exact Extract:

\* A. Valid: A CATCH block can list multiple exception classes separated by |.

\* B. Wrong: CLEANUP is not a catch mechanism; it executes after try/catch, regardless of exception, but does not handle exceptions.

\* C. Wrong: Only the first matching CATCH executes, not all.

\* D. Valid: A superclass exception handler can catch its subclasses.

\* E. Valid: Best practice is to order CATCH blocks from most specific # most general.

Study Guide Reference: ABAP Keyword Documentation - TRY ... CATCH ... CLEANUP.

#### NEW QUESTION # 77

In a RAP business object, where is the validation implementation code contained?

- A. Function
- B. Local class
- C. Subroutine
- D. Global class

**Answer: B**

Explanation:

Comprehensive and Detailed Explanation from Exact Extract:

\* In RAP, validations, determinations, and actions are implemented inside the local handler class (lhc\_...) of the behavior pool.

\* Global classes are not used directly for RAP BO logic, only for reusable utilities.  
\* Functions or subroutines are not cloud-compliant for RAP implementation.  
Thus, validation code always resides in the local handler class inside the RAP behavior pool.  
Study Guide Reference: RAP Development Guide - Validations in Behavior Implementation.

### NEW QUESTION # 78

You are given the following information:

1.  
The data source "spfli" on line #2 is an SAP HANA database table
  2.  
"spfli" will be a large table with over one million rows.
  3.  
This program is the only one in the system that accesses the table.
  4.  
This program will run rarely.
- Based on this information, which of the following general settings should you set for the spfli database table? Note: There are 2 correct answers to this question.

- A. "Storage Type" to "Column Store"
- B. "Storage Type" to "Row Store"
- C. "Load Unit" to "Page Loadable"
- D. "Load Unit" to "Column Loadable"

**Answer: B,C**

Explanation:

Based on the given information, the spfli database table should have the following general settings:

"Storage Type" to "Row Store": This setting determines how the data is stored in the SAP HANA database. Row store is suitable for tables that are accessed by primary key or by a small number of columns. Column store is suitable for tables that are accessed by a large number of columns or by complex analytical queries. Since the spfli table is a large table with over one million rows, and this program is the only one in the system that accesses the table, it is likely that the program will use primary key access or simple queries to access the table. Therefore, row store is a better choice than column store for this table<sup>12</sup>.

"Load Unit" to "Page Loadable": This setting determines how the data is loaded into the memory when the table is accessed. Page loadable means that the data is loaded in pages of 16 KB each, and only the pages that are needed are loaded. Column loadable means that the data is loaded in columns, and only the columns that are needed are loaded. Since the spfli table is a row store table, and this program will run rarely, it is more efficient to use page loadable than column loadable for this table. Page loadable will reduce the memory consumption and the loading time of the table<sup>13</sup>.

### NEW QUESTION # 79

.....

Getcertkey try hard to makes SAP SAP Certified Associate - Back-End Developer - ABAP Cloud exam preparation easy with its several quality features. Our C-ABAPD-2507 exam dumps come with 100% refund assurance. We are dedicated to your accomplishment, hence pledges you victory in C-ABAPD-2507 Certification exam in a single attempt. If for any reason, a user fails in C-ABAPD-2507 exam then he will be refunded the money after the process.
