CAD exam is aimed at individuals who have experience in developing applications using the ServiceNow platform and are looking to validate their skills and knowledge. CAD Exam is split into two parts - the first part covers fundamental concepts and the second part covers advanced topics.

ServiceNow Certified Application Developer-ServiceNow Sample Questions (Q36-Q41):

NEW QUESTION # 36

Which of the following CANNOT be debugged using the Field Watcher?

- A. Business Rules
- B. Script Includes

- C. Client Scripts
- D. Access Controls

Answer: B

Explanation:

The Field Watcher is a debugging tool that allows you to monitor the values of fields on a form as they change due to scripts or other actions. It can be used to debug Business Rules, Client Scripts, and Access Controls, but not Script Includes. Script Includes are server-side scripts that define reusable functions and classes. They are not associated with any specific field or form, and therefore cannot be watched by the Field Watcher.

Reference:

Field Watcher

Script Includes

NEW QUESTION # 37

Which one of the following is NOT a debugging strategy for client-side scripts?

- A. Field Watcher
- B. `g_form.addInfoMessage()`
- C. `jslog()`
- D. `gs.log()`

Answer: D

Explanation:

https://developer.servicenow.com/dev.do#!/learn/learning-plans/rome/new_to_servicenow/app_store_learnv2_scripting_rome_debugging_client_scripts

NEW QUESTION # 38

What is the Event Registry?

- A. The method used in server-side scripts to generate Events and pass parameters
- B. A Workflow which is launched every time an Event is generated; used to debug Events
- C. The Event Log which lists all Events that have been generated
- D. A table containing a record for every Event known to the ServiceNow system which allows ServiceNow to react when Events are generated

Answer: D

Explanation:

In ServiceNow, the Event Registry is a table that contains a record for every event recognized by the system.

It allows ServiceNow to respond when these events are generated. By registering events, the system can automate activities such as triggering notifications or executing script actions when specific events occur.

Therefore, the correct answer is A.

The other options are not accurate descriptions of the Event Registry:

* B. The Event Log which lists all Events that have been generated: This describes the Event Log, not the Event Registry.

* C. A Workflow which is launched every time an Event is generated; used to debug Events: This is not how the Event Registry functions.

* D. The method used in server-side scripts to generate Events and pass parameters: This describes the `gs.eventQueue()` method, not the Event Registry.

For more detailed information, refer to the official ServiceNow documentation on the Event Registry.

NEW QUESTION # 39

Which of the following statements is true for the Form Designer?

- To add a field to the form layout, drag the field from the Fields tab to the desired destination on the form.
- To create a new field on a form's table, drag the appropriate data type from the Field Types tab to the form and then configure the new field.
- To remove a field from the form layout, hover over the field to enable the Action buttons, and select the Delete (X) button.

d) To add a section to the form layout, drag it from the Field Types tab to the desired destination on the form.

- A. a, b, and d
- B. b, c, and d
- C. a, b, and c
- D. a, b, c, and d

Answer: C

Explanation:

https://docs.servicenow.com/bundle/tokyo-platform-administration/page/administer/form-administration/concept/c_FormDesign.html
The Form Designer is a graphical interface for creating and customizing forms. The following statements are true for the Form Designer:

To add a field to the form layout, drag the field from the Fields tab to the desired destination on the form. This will add the field to the form view without changing the table definition.

To create a new field on a form's table, drag the appropriate data type from the Field Types tab to the form and then configure the new field. This will create a new column on the table and add the field to the form view.

To remove a field from the form layout, hover over the field to enable the Action buttons, and select the Delete (X) button. This will remove the field from the form view but not from the table definition.

The following statement is false for the Form Designer:

To add a section to the form layout, drag it from the Field Types tab to the desired destination on the form. This is incorrect because sections are not available in the Field Types tab. To add a section, click the Add Section button on the toolbar or right-click on the form and select Add Section. NEW QUESTION # 40

What tool is used to import data from various data sources, and map that data into ServiceNow tables?

- A. Update Set
- B. Data Pack
- C. Transform Set
- D. Import Set

Answer: D
