

# The Cisco 300-610 Exam with Desktop Practice Exam Software

2026 Latest ITExamSimulator 300-610 PDF Dumps and 300-610 Exam Engine Free Share: [https://drive.google.com/open?id=1hMKwWF8g1eCF7cfBiV6\\_r\\_SNGarBq6nu](https://drive.google.com/open?id=1hMKwWF8g1eCF7cfBiV6_r_SNGarBq6nu)

The three versions of our 300-610 exam questions are PDF & Software & APP version for your information. Each one has its indispensable favor respectively. All 300-610 training engine can cater to each type of exam candidates' preferences. Our 300-610 practice materials call for accuracy legibility and high quality, so 300-610 study braindumps are good sellers and worth recommendation for their excellent quality.

Cisco 300-610 exam covers a variety of topics related to data center infrastructure design, including network design, storage design, compute design, and automation design. Candidates are expected to have a deep understanding of data center architecture and be able to design, implement, and troubleshoot complex data center infrastructure solutions. 300-610 Exam also tests candidates on their knowledge of Cisco technologies and solutions, including Cisco ACI, Cisco UCS, and Cisco Nexus switches.

## 300-610 Flexible Learning Mode | 300-610 Latest Exam Camp

We offer you free demo for you to have a try before buying the 300-610 study guide, so that you can have a better understanding of what you are going to buy. 300-610 exam dumps of us also offer you free update for one year after purchasing, and our system will send the latest version to you automatically. Besides we have the online and offline chat service stuff, and if you have any questions about the 300-610 Study Guide, you can consult them, and they will offer you the suggestions.

## Cisco Designing Cisco Data Center Infrastructure Sample Questions (Q172-Q177):

### NEW QUESTION # 172

An engineer must design a solution based on Cisco Nexus 7709 Switches. The solution must connect test and development network segments and separate the enterprise applications from the production network. The network security team requires routing instances and the IP stack to be completely separated from each other and for traffic between the environments to undergo a deep packet inspection. The development team also requests the ability to allocate additional physical interfaces from the Cisco Nexus 7709 device in each environment.

Which solution meets these requirements?

- A. 1) Create a separate VRF for the testing and development environments.  
2) Control reachability by using firewall access policies.
- B. 1) Create a VRF for the testing and development environments.  
2) Use ACLs to control traffic between the two environments.
- C. 1) Enable new routing instances for the testing and development environments in the same VDC.  
2) Control reachability by using firewall access policies.
- D. 1) Assign a separate VDC for the testing and development environments.

2. Place a firewall between the VDCs.

**Answer: A**

#### NEW QUESTION # 173

What are two reasons to select OTV as the DCI solution to connect multisite topologies? (Choose two.)

- A. It propagates hosts reachability without support of traffic flooding.
- B. It constrains HSRP hello messages to each data center.
- C. Layer 3 failures do not propagate beyond the OTV edge device.
- D. It extends the spanning tree between data centers.
- E. It is an open standard.

**Answer: C,D**

#### NEW QUESTION # 174

DRAG DROP

Drag and drop the configurations from the left onto the correct policies on the right.

Select and Place:

□

**Answer:**

Explanation:

□

Section: Compute Design

#### NEW QUESTION # 175

An engineer configured the OSPF protocol in the vPC topology. During the catastrophic failure of one of the vPC member switches, the traffic was routed to a black hole. This route was caused by the long convergence time caused by the delay of the vPC member switch reboot. After the failure, the engineer rebooted both switches, but the secondary switch powered on before the primary one. It caused all the vPCs to be shut down due to consistency-check violations.

Which two features must be used to prevent these situations from happening in the future?

(Choose two.)

- A. auto-recovery
- B. peer-gateway
- C. delay restore
- D. system priority
- E. ip arp synchronize

**Answer: A,C**
