In the present situation, you will find companies laying off their employees without any notice or prior information. They are just receiving an email and the next moment they have no access to the company network. So to avoid all this, you have to keep yourself updated with the new version of technologies and applications. You have to become one of HCIP-Intelligent Vision V1.0 (H12-521_V1.0) certification holders who survived the laying off situation and are still in a great position in their company. You cannot afford to lose it when you need your job the most.

By passing the Huawei H12-521_V1.0 Certification Exam, candidates will be recognized as experts in the field of intelligent vision. HCIP-Intelligent Vision V1.0 certification is highly valued by employers in industries such as public safety, transportation, and retail. It also provides a solid foundation for further career development in the field of intelligent vision, including the opportunity to pursue advanced certifications such as the Huawei Certified ICT Professional-Intelligent Video Surveillance.

Free PDF Quiz Huawei - High Pass-Rate H12-521_V1.0 - HCIP-Intelligent Vision V1.0 Reliable Exam Cost

We will have a dedicated specialist to check if our H12-521_V1.0 learning materials are updated daily. We can guarantee that our H12-521_V1.0 exam question will keep up with the changes, and we will do our best to help our customers obtain the latest information. If you choose to purchase our H12-521_V1.0 quiz torrent, you will have the right to get the update for free. Once our H12-521_V1.0 Learning Materials are updated, we will automatically send you the latest information about our H12-521_V1.0 exam question. We assure you that our company will provide customers with a sustainable update system.

Huawei H12-521_V1.0 (HCIP-Intelligent Vision V1.0) Exam is a certification exam that validates the knowledge and skills of professionals in the field of intelligent vision. H12-521_V1.0 exam is designed to test the proficiency of individuals in implementing and managing the intelligent vision solutions using the Huawei technologies. The HCIP-Intelligent Vision V1.0 exam is a part of Huawei's certification program that is widely recognized and respected by the industry.

Huawei H12-521_V1.0-ENU certification exam is a comprehensive test of an individual's knowledge in the field of intelligent vision

technology. H12-521_V1.0 Exam is designed to assess the candidate's ability to apply theoretical knowledge and practical skills in real-world scenarios. H12-521_V1.0 exam consists of multiple-choice questions, and candidates are required to demonstrate their understanding of various concepts related to intelligent vision technology. HCIP-Intelligent Vision V1.0 certification is an excellent way for professionals to demonstrate their expertise in the field and enhance their career prospects.

Huawei HCIP-Intelligent Vision V1.0 Sample Questions (Q19-Q24):

NEW QUESTION # 19

Which of the following is not a feature of a Kunpeng processor?

- A. Uses a small, highly-optimized set of instructions.
- B. Features low power consumption and high integration.
- C. Adopts multi-core architecture.
- D. Adopts closed architecture.

Answer: D

Explanation:

The correct answer is C because the Kunpeng processor is characterized by ARM-based RISC design, multi-core capability, low power consumption, and high integration, but not by a closed architecture. The material describes Kunpeng's strengths by stating that "The ARM architecture is used so that the same function performance occupies a smaller area of the chip, consumes less power, and are highly integrated. More hardware CPU cores are provided for better concurrent processing" and further notes that "The RISC instruction set is used. The instruction length is fixed, the addressing mode is flexible and simple, and the execution efficiency is high". These statements directly support options A, B, and D.

From an engineering perspective, ARM-based processors are known for compact instruction design, strong concurrency through many CPU cores, and high performance per watt. Those are exactly the attributes highlighted here. By contrast, "closed architecture" is not presented as a Kunpeng feature in the training material and does not align with Huawei's ecosystem positioning, which emphasizes compatibility across multiple operating systems and application scenarios from IoT to cloud. Therefore, C is the only option that does not describe the Kunpeng processor.

NEW QUESTION # 20

Which of the following documents need to be prepared by engineers before IVS LLD?

- A. Project configuration file
- B. LLD report
- C. JSON file
- D. Network plan file, including the network segment and IP address range on the live network.

Answer: A,C,D

Explanation:

The correct answers are A, C, and D because the documents prepared before IVS low-level design are the input materials used for design, deployment generation, and parameter definition, while the LLD report is an output of the LLD activity itself. The material emphasizes that network planning must be completed in advance, and the deployment process requires predefined addressing and parameter information. This is consistent with statements such as determining the network segment and IP address range for each network plane before deployment, and with the repeated use of fixed external service and management IP planning in domain and cluster configuration workflows.

From an engineering workflow perspective, the network plan file is required because network segments, IP ranges, and live-network planning must be decided in advance. A project configuration file is also needed because it carries deployment-specific parameters for the project. A JSON file is typically used as a structured import or export artifact generated by design tools and then consumed during planning or deployment preparation. However, the LLD report is not a prerequisite input document; it is the design deliverable produced after engineers complete the LLD work. Therefore, the required pre-LLD preparation documents are A, C, and D.

NEW QUESTION # 21

In the scenario of external domain connection, the purpose of configuring external domain sharing equipment is to share the equipment of this domain to the other domain, for example, share the local cameras to the other domain, so that the other domain can view the live video and recording of these cameras.

- A. False
- B. True

Answer: A

NEW QUESTION # 22

Which of the following applications does not belong to the scope of target recognition?

- A. Hair color comparison
- B. Age recognition
- C. Target 1:1 comparison
- D. Objective 1: N search

Answer: A

NEW QUESTION # 23

Regarding Huawei HoloSens IVS3800c, which of the following descriptions is correct? (Multiple Choice)

- A. IVS3800c the SSD data disk, for storing structured data
- B. IVS3800c provides structured data and characteristic data retrieval function after intelligent analysis
- C. IVS3800c the NVMe disk, for storing the feature value data
- D. s3800c maximum matching, 6 block rising AI Accelerator

Answer: A,D

NEW QUESTION # 24
