

# Exam JN0-105 Actual Tests - Exam JN0-105 Testking

What's more, part of that Pass4cram JN0-105 dumps now are free: [https://drive.google.com/open?id=1-KchU8BqF4dgv\\_EAdKEO-gExDDBv8WLy](https://drive.google.com/open?id=1-KchU8BqF4dgv_EAdKEO-gExDDBv8WLy)

Our JN0-105 exam prep boosts many merits and useful functions to make you to learn efficiently and easily. Our JN0-105 guide questions are compiled and approved elaborately by experienced professionals and experts. The download and tryout of our JN0-105 torrent question before the purchase are free and we provide free update and the discounts to the old client. Our customer service personnel are working on the whole day and can solve your doubts and questions at any time. so you can download, install and use our JN0-105 Guide Torrent quickly with ease.

## Juniper JN0-105 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"><li>Networking Fundamentals: The topic networking fundamentals covers identifying the concepts and functionality of different fundamental elements of networking.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>Configuration Basics: Identification of the main elements for configuring Junos devices is discussed in this topic. Moreover, it describes configuring basic components of a Junos device</li></ul>
Topic 3	<ul style="list-style-type: none"><li>Operational Monitoring and Maintenance: Different methods of monitoring or maintaining Junos devices are identified in this topic. Lastly, it discusses monitoring or maintenance procedures for a Junos device.</li></ul>
Topic 4	<ul style="list-style-type: none"><li>User Interfaces: This topic delves into identifying the concepts, operation, or functionality of the Junos user interface.</li></ul>
Topic 5	<ul style="list-style-type: none"><li>Routing Policy and Firewall Filters: The topic of Routing Policy and Firewall Filters covers routing policy and firewall filters on Junos devices. Furthermore, the topic also deals with routing policies and firewall filters on a Junos device.</li></ul>

## Exam JN0-105 Testking - Updated JN0-105 Demo

Sharp tools make good work. JN0-105 study material is the best weapon to help you pass the exam. After a survey of the users as many as 99% of the customers who purchased JN0-105 study material has successfully passed the exam. The pass rate is the test of

a material. Such a high pass rate is sufficient to prove that JN0-105 Study Material has a high quality. In order to reflect our sincerity on consumers and the trust of more consumers, we provide a 100% pass rate guarantee for all customers who have purchased JN0-105 study materials.

## Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q18-Q23):

### NEW QUESTION # 18

What information is exchanged during a TCP three-way handshake? (Choose two)

- A. application name
- B. sequence numbers
- C. port numbers
- D. interfaces

**Answer: B,C**

Explanation:

The TCP three-way handshake establishes a reliable connection between two hosts. During this process:

\* SYN: The client sends a TCP segment with the SYN flag set, including an initial sequence number (ISN) and port information.  
\* SYN-ACK: The server responds with a SYN-ACK, which contains its own sequence number and acknowledgment of the client's ISN.

\* ACK: The client replies with an ACK, confirming receipt of the server's ISN.

Thus, port numbers (to identify the application endpoints) and sequence numbers (to ensure ordered and reliable data transfer) are exchanged.

Interfaces and application names are not exchanged during this process.

From Junos OS Fundamentals / TCP Concepts:

"The TCP three-way handshake establishes a reliable session by exchanging port numbers and sequence numbers between peers. This process synchronizes both sides before data transmission begins." References:

Juniper TechLibrary - TCP Overview

JNCIA-Junos Exam Objective: TCP/IP Concepts

### NEW QUESTION # 19

You configured your system authentication order using the set authentication-order tacplus radius password command.

Which statement is correct in this scenario?

- A. The password authentication method is evaluated if the TACACS+ and RADIUS servers respond with a reject message.
- B. A rejection by TACACS+ will prevent a login and bypass the other two authentication methods.
- C. All authentication methods are used with the most restrictive permission set used.
- D. The password authentication will only be used if the TACACS+ and RADIUS servers fail to respond.

**Answer: D**

Explanation:

In the scenario where the system authentication order is set to "tacplus radius password," the correct statement is (B). If the TACACS+ and RADIUS servers are unreachable or fail to respond, the system will fall back to using password authentication. This ensures that users can still authenticate using locally stored passwords if external authentication servers are unavailable.

### NEW QUESTION # 20

Click the Exhibit button.

```
[edit firewall filter test]
term 1 {
    from {
        source-address {
            10.0.0.0/8;
        }
    }
    then {
        log;
        next term;
    }
}
term 2 {
    then {
        reject;
    }
}
```

How is traffic, sourced from 10.0.0.0/8, treated by the firewall filter shown in the exhibit?

- A. logged and discarded
- B. logged and rejected
- C. logged with no further action
- D. logged and accepted**

**Answer: D**

Explanation:

The firewall filter configuration in the exhibit specifies a filter with two terms. Term 1 matches traffic from the source address 10.0.0.0/8 and has two actions: 'log' and 'next term'. The 'log' action will record the match to a log file, and 'next term' indicates that the firewall should evaluate the next term after logging. There is no explicit action such as 'accept' or 'reject' in term 1, so by default, the traffic will be accepted unless subsequently rejected by another term.

Term 2 has the action 'reject', which discards packets that reach this term. Since there is no 'from' condition in term 2, it acts as a default rule for all traffic not matched by term 1.

Because the traffic sourced from 10.0.0.0/8 matches term 1 and there is no reject action in that term, it will be logged and then accepted by the firewall filter. There is no subsequent term that rejects this specific traffic, so the action from term 2 does not apply to it.

#### NEW QUESTION # 21

Which Junos OS component is responsible for maintaining the forwarding table?

- A. chassis control daemon
- B. Routing Engine
- C. management daemon
- D. Packet Forwarding Engine**

**Answer: D**

Explanation:

The Packet Forwarding Engine (PFE) in Junos OS is responsible for maintaining the forwarding table. The PFE processes incoming packets, performs route lookups in the forwarding table, and forwards packets based on this information, offloading these tasks from the Routing Engine to ensure efficient packet forwarding.

#### NEW QUESTION # 22

Click the Exhibit button.

**Exhibit**

```
[edit protocols ospf]
user@router# show
area 0.0.0.0 {
    interface all;
}
export [ policy1 policy2 policy3 ];
[edit routing-options]
user@router# show
static {
    route 10.10.10.0/24 next-hop 192.168.1.254;
}
```

Referring to the exhibit, OSPF has three export policies that match different static route prefixes. The 10.10.10.0/24 static route does not match any terms in the policy1 routing policy.

What happens next in this scenario?

- A. The static route is evaluated by the policy3 routing policy.
- B. The static route is rejected by the policy1 routing policy.
- C. The static route is evaluated by the policy2 routing policy.
- D. The static route is rejected by the default routing policy.

**Answer: C**

Explanation:

In Junos, when multiple policies are applied to a routing protocol for route export, the routes are evaluated in the order in which the policies are listed. In the exhibit, the OSPF configuration has three export policies listed: policy1, policy2, and policy3. The static route 10.10.10.0/24 does not match any terms in policy1; therefore, it is not rejected by policy1 but is instead passed on to the next policy in the sequence, which is policy2.

If the static route matches a term in policy2 that permits the route, it will be exported into OSPF. If it does not match in policy2, it will then be evaluated by policy3. If there is no match in policy3 as well, and assuming there are no more policies listed, the route would then be subject to the default routing policy behavior, which typically rejects the route unless an explicit accept statement is present in the policies.

## NEW QUESTION # 23

.....

Our Pass4cram has devoted more time and efforts to develop the JN0-105 exam software for you to help you successfully obtain JN0-105 exam certification with less time and efforts. Our promise of "no help, full refund" is not empty talk. No matter how confident we are in our dumps, once our dumps do not satisfy you or have no help for you, we will immediately full refund all your money you purchased our JN0-105 Exam software. However, we believe that our JN0-105 exam software will meet your expectation, and wish you success!
