최신 SAP Certified Associate C_TS470_2412 무료 샘플문제 (Q51-Q56):

질문 # 51

You are a consultant on an SAP S/4HANA Cloud brownfield project. Several mission-critical business processes have been successfully remodeled in accordance with clean core principles. You must now create the necessary workflows. Which of the following SAP Signavio solutions can be used to create the workflows?

- A. SAP Signavio Process Manager
- B. SAP Signavio Process Insights
- C. SAP Signavio Process Governance
- D. SAP Signavio Process Intelligence

정답: A

설명:

SAP Signavio provides tools to support process modeling and management. For creating workflows in a brownfield project aligned with clean core principles:

- * SAP Signavio Process Manager: This is the primary tool for designing and modeling workflows and business processes. It allows consultants to create detailed process diagrams (e.g., BPMN 2.0) and define workflows that integrate with SAP S/4HANA, supporting clean core extensibility.
- * SAP Signavio Process Intelligence: Focused on process analysis and mining, not workflow creation.
- * SAP Signavio Process Insights: Provides performance insights and optimization recommendations, not workflow design.
- * SAP Signavio Process Governance: Manages process execution and compliance, not initial workflow creation. This aligns with SAP's transformation methodology for S/4HANA brownfield implementations. "SAP Signavio Process Manager enables the creation of workflows and process models for SAP S/4HANA implementations." (SAP Signavio Mission to SAP S/4HANA).

질문 # 52

From which of the following business objects can you access the items of bills of material (BOMs) with BOM usage S (S4 Service)?

- A. Service order
- B. Service request
- C. Service confirmation
- D. Service entry sheet

정답: A

설명:

BOM usage S (S4 Service) is specific to service processes in SAP S/4HANA Cloud Private Edition, Service, listing components for service activities. The correct answer is service order (C). Let's explore this thoroughly.

BOM Usage S Context:

Unlike BOM usage 4 (Plant Maintenance), usage S is tailored for service scenarios, integrating with service orders to plan materials or services.

Why Service Order?

A service order (e.g., transaction IW31 or Fiori app) can reference a technical object (e.g., equipment) or task list with a BOM usage S. The BOM items (e.g., spare parts) are accessed in the "Components" tab of the service order, enabling planning and reservation. For example, a service order for Equipment "E001" pulls BOM items like "Filter" and "Seal" from its usage S BOM.

Why Not the Others?

- * Service request (A): A preliminary document (e.g., notification) without BOM integration.
- * Service entry sheet (B): For external service acceptance, not BOM access.
- * Service confirmation (D): Records executed work, not planning with BOMs.

Process Flow:

Service order created # BOM usage S linked to object # Components tab shows items.

"BOM items with usage S (S4 Service) can be accessed from a service order for planning service activities."

질문 # 53

What options does a service planner have to influence the maintenance plan schedule? Note: There are 3 correct answers to this question.

- A. Freeze call
- B. Release call
- C. Skip call
- D. Copy call
- E. Fix call

정답: A,C,E

설명:

In SAP S/4HANA Cloud Private Edition, Service, a service planner can influence the maintenance plan schedule using specific actions to manage service calls effectively. The maintenance plan schedule is part of the recurring services process, where maintenance plans generate service calls based on defined cycles (e.g., time-based or counter-based). The options available to influence this schedule include:

- * Freeze call: This option allows the planner to lock a scheduled call, preventing it from being rescheduled or regenerated automatically until it is unfrozen. It ensures stability in planning for critical service events.
- * Skip call: This allows the planner to bypass a specific scheduled call without affecting the overall schedule. It's useful when a service event is not required at a particular time (e.g., due to customer availability).
- * Fix call: This option fixes a call at a specific date, ensuring it remains scheduled as planned and is not shifted by automatic rescheduling processes. It provides control over critical service timing.
- * Copy call and Release call are not standard options for directly influencing the maintenance plan schedule. Copying a call might be a manual workaround in some scenarios, but it's not a documented feature for schedule influence. Releasing a call is part of execution (e.g., releasing a service order), not schedule planning. These capabilities are detailed in the SAP S/4HANA Service documentation under recurring services and maintenance planning features, such as scope item 3MO (Service Contract Management). "In the maintenance plan scheduling, planners can freeze, skip, or fix calls to adjust the schedule according to operational needs." (SAP Signavio Process Navigator, Solution Process: Recurring Services).

질문 # 54

Which of the following is a prerequisite to install a piece of equipment in a functional location?

- A. Allow the combination of equipment category and object type to be installed in a functional location
- B. Allow the equipment category to be installed in a functional location
- C. Set the installation flag for a piece of equipment
- D. Set the installation flag for a functional location category

정답: B

설명:

To install equipment in a functional location in SAP S/4HANA:

- * Allow the equipment category to be installed in a functional location: The equipment category (e.g., M for machines) must be configured to permit installation (set in transaction OIEQ), ensuring compatibility with functional locations.
- * Combination of equipment category and object type: Object types are for classification, not installation prerequisites.
- * Installation flag for equipment/functional location: No such flags exist; installation is controlled by category settings. This is part of equipment management setup. "The equipment category must allow installation in a functional location as a prerequisite." (SAP Help Portal, Equipment Installation).

질문 # 55

What are the benefits of maintaining bills of material (BOMs) with BOM usage 4 (Plant Maintenance)? Note: There are 2 correct answers to this question.

- A. Structuring of technical assets
- B. Spare parts planning in task list
- C. Spare parts planning in service order

- D. Spare parts planning in service order template

정답: B,C

설명:

BOM usage 4 (Plant Maintenance) in SAP S/4HANA Cloud Private Edition, Service is designed for maintenance processes, listing components (e.g., spare parts) for technical objects. The correct benefits are spare parts planning in task list (C) and spare parts planning in service order (D). Let's break this down thoroughly.

What is BOM Usage 4?

A BOM with usage 4 is linked to equipment or functional locations, defining parts needed for maintenance (e.g., bolts, filters). It's maintained in transactions like IB01/IB02.

* Spare parts planning in task list (C): When a task list (e.g., for pump maintenance) references a technical object with a BOM usage 4, the BOM's components are pulled into the task list operations as planned spare parts. This ensures materials are reserved or ordered in advance. For example, Operation 0010 might list "Gasket" from the BOM.

* Spare parts planning in service order (D): A service order linked to a technical object inherits the BOM usage 4 components, enabling spare parts planning directly in the order. This supports reservations or goods issues (e.g., via IW31/IW32).

Why Not the Others?

* Spare parts planning in service order template (A): Service order templates define structure, not BOM-linked planning; BOM usage 4 applies to execution objects (orders, task lists).

* Structuring of technical assets (B): BOMs describe components, not the hierarchical structure (handled by functional locations or equipment hierarchies).

Real-World Benefit:

A pump's BOM (usage 4) lists "Seal" and "Bearing." A task list or service order automatically plans these, reducing downtime by ensuring availability.

"BOMs with usage 4 enable spare parts planning in task lists and service orders, enhancing maintenance efficiency."
