you may ask, our after sale service staffs will help you to solve your problems of C_SIGDA_2403 practice braindump in the most professional way. Since our customers aiming to C_SIGDA_2403 study tool is from different countries in the world, and there is definitely time difference among us, we will provide considerate online after-sale service on our C_SIGDA_2403 training guide twenty four hours a day, seven days a week, please just feel free to contact with us anywhere at any time.

SAP Certified Associate - Process Data Analyst - SAP Signavio Sample Questions (Q16-Q21):

NEW QUESTION # 16

Which Process Performance Indicator categories are most relevant when striving to identify automation potential? Note: There are 2 correct answers to this question.

- A. Automation rate
- B. Master data
- C. Backlog
- D. Exceptions

Answer: A,D

NEW QUESTION # 17

What is the heart of the SAP Signavio Process Transformation Suite?

- A. SAP Signavio Process Intelligence
- B. SAP Signavio Process Manager
- C. SAP Signavio Process Governance
- D. SAP Signavio Process Collaboration Hub

Answer: D

NEW QUESTION # 18

What are some benefits of the comment function in the SAP Signavio Process Collaboration Hub? Note: There are 2 correct answers to this question.

- A. Include all employees in process performances and reviews.
- B. Add relevant attributes directly through the comment function.
- C. Edit and publish processes immediately.
- D. Optimization can be achieved much faster.

Answer: A,D

Explanation:

The comment function within the SAP Signavio Process Collaboration Hub offers several benefits, primarily aimed at enhancing collaboration and optimization. Firstly, it allows for the inclusion of all employees in process performance reviews and discussions, thereby fostering a culture of continuous improvement and engagement across the organization. Secondly, optimization processes can be significantly accelerated as feedback and suggestions are gathered and acted upon swiftly. This function does not, however, directly enable users to edit and publish processes (which is more aligned with the administrative rights within the tool) or to add relevant attributes directly through the comment function, as attributes are typically managed within the process modeling environment. NEW QUESTION # 19

Which group includes the E-Mail task?

- A. Automatic actions
- B. Services & other actions
- C. Main actions
- D. Events & Gateways

Answer: C

NEW QUESTION # 20

How would you analyze the performance of individual locations/organizations?

- A. By using compare different process flows
- B. By using blockers
- C. By using industry benchmarks
- **D. By using a filter**

Answer: D

Explanation:

Analyzing the performance of individual locations or organizations in SAP Signavio Process Intelligence involves isolating data specific to each entity. The SAP Signavio Process Intelligence User Guide provides clear guidance on this:

* Exact Extract: "Filters in SAP Signavio Process Intelligence allow users to segment data by specific attributes, such as location, organization, or company code, to analyze performance metrics like cycle time or error rates for individual entities." (SAP Signavio Process Intelligence User Guide, section on "Data Segmentation and Filters").

* Explanation:

* Option B (By using a filter): Filters are the primary tool for analyzing performance at a granular level, such as by location or organization. For example, a filter can be applied to select data for a specific region (e.g., "Location = Europe") and then analyze KPIs like processing time or case volume for that subset. Filters can be applied at the investigation, chapter, or widget level to focus on specific entities.

* Option A (By using blockers) is incorrect because blockers are visual indicators used to highlight issues (e.g., delays) in process flows, not for segmenting data by location or organization.

* Option C (By using industry benchmarks) is incorrect as industry benchmarks provide external reference points for comparison, not a method to isolate performance data for specific locations.

* Option D (By using compare different process flows) is incorrect because comparing process flows analyzes variants or models, not performance metrics for specific organizational units.
