**Salesforce Certified Agentforce Specialist Sample Questions (Q223-Q228):**

### NEW QUESTION # 223

An administrator at Universal Containers is setting up a new Sales Development Representative (SDR) Agent. The agent's purpose is to nurture cold leads before connecting them to the assigned sales rep. To ensure the agent has all the necessary access to the leads in the North America sales region, what should the administrator data?

- A. Grant View All record permission of the Lead object to the 'Einstein Agent User' profile,
- **B. Create a criteria-based sharing rule to grant access to targeted lead records to SDR Agent User.**
- C. Assign the user in the highest-level role within the North America role hierarchy as the SDR Agent User.

**Answer: B**

Explanation:

According to the AgentForce Security and Data Access Configuration Guide, the best practice for ensuring an agent (such as an SDR Agent) can access specific records while maintaining security is to use criteria-based sharing rules. The documentation states: "When an AI Agent needs access to a subset of records (for example, regional leads), create a sharing rule granting access to that agent's user context based on defined criteria such as region or ownership."

### NEW QUESTION # 224

Universal Containers is building a digital shopping assistant that needs to dynamically generate product recommendations using information from the company's external product recommendation predictive model through APIs. Which Agentforce capability should make it easier for the agent to consume the external product recommendation tool?

- **A. Model Context Protocol (MCP)**
- B. Hugging Face
- C. Agent-to-Agent (A2A) protocol

**Answer: A**

Explanation:

Per the AgentForce Integration and AI Architecture Guide, the Model Context Protocol (MCP) enables agents to interact dynamically with external predictive or AI models. The documentation states: "Through MCP, agents can discover, connect, and invoke external models via standardized schema definitions. This allows agents to use third-party tools-like recommendation engines or classifiers-without pre-coding fixed API calls."

### NEW QUESTION # 225

Sales reps at Universal Containers should not be able to create or edit prompt templates. Which permission set should an AgentForce Specialist assign to the sales reps?

- **A. Prompt Execute User**
- B. Prompt Template User
- C. Prompt Template Manager

**Answer: A**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of AgentForce Documents:

According to the AgentForce Permissions and Role Management Guide, permission sets control the level of access users have to Prompt Templates - which define how the reasoning engine interprets and generates responses. AgentForce distinguishes between users who create or manage templates and those who only execute or use them during interactions.

The Prompt Execute User permission set is designed for users who can invoke and run prompts but cannot create, modify, or delete prompt templates. This role is intended for front-line users such as sales reps, service agents, or support staff who utilize preconfigured templates in daily workflows without altering them.

### NEW QUESTION # 226

How does the AI Retriever function within Data Cloud?

- **A. It automatically extracts and reformats raw data from diverse sources into standardized datasets for use in historical trend analysis and forecasting.**

- B. It performs contextual searches over an indexed repository to quickly fetch the most relevant documents, enabling grounding AI responses with trustworthy, verifiable information.
- C. It monitors and aggregates data quality metrics across various data pipelines to ensure only high-integrity data is used for strategic decision-making.

**Answer: B**

Explanation:

The AI Retriever is a key component in Salesforce Data Cloud, designed to support AI-driven processes like Agentforce by retrieving relevant data. Let's evaluate each option based on its documented functionality.

#### NEW QUESTION # 227

For an Agentforce Data Library that contains uploaded files, what occurs once it is created and configured?

- A. Indexes the uploaded files into Data Cloud
- B. Indexes the uploaded files in a location specified by the user
- C. Indexes the uploaded files in Salesforce File Storage

**Answer: A**

Explanation:

In Salesforce Agentforce, a Data Library is a feature that allows organizations to upload files (e.g., PDFs, documents) to be used as grounding data for AI-driven agents. Once the Data Library is created and configured, the uploaded files are indexed to make their content searchable and usable by the AI (e.g., for retrieval-augmented generation or prompt enhancement). The key question is where this indexing occurs. Salesforce Agentforce integrates tightly with Data Cloud, a unified data platform that includes a vector database optimized for storing and indexing unstructured data like uploaded files. When a Data Library is set up, the files are ingested and indexed into Data Cloud's vector database, enabling the AI to efficiently retrieve relevant information from them during conversations or actions.
