WGU인증사에서 주최하는 Web-Development-Applications 시험은 IT 업계에 종사하는 분이시라면 모두 패스하여 자격증을 취득하고 싶으리라 믿습니다. KoreaDumps에서는 여러분이 IT인증 자격증을 편하게 취득할 수 있게 도와드리고 있는 IT자격증 시험 대비 시험 자료를 제공해 드리는 전문 사이트입니다. KoreaDumps 덤프로 자격증 취득의 꿈을 이루세요.

WGU Web-Development-Applications 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none"> • HTML5, CSS3, and JavaScript Foundations: This section of the exam measures skills of Web Developers and covers the essential ability to manually code using HTML5, CSS3, and JavaScript to create structured, visually styled, and interactive web content. It focuses on building accurate page layouts, applying modern styling rules, and writing basic scripts that support user interaction. The aim is to ensure candidates can construct professional web documents using current standards and properly integrate all three technologies.
주제 2	<ul style="list-style-type: none"> • Responsive Web Design (RWD) for Browsers and Apps: This section of the exam measures skills of Front-End Designers and covers concepts related to mobile-first layout planning, responsive frameworks, and techniques used to ensure compatibility with modern browsers and applications. Candidates must demonstrate how to adjust elements for better usability on mobile devices and apply responsive strategies that allow a single design to function seamlessly across various environments.
주제 3	<ul style="list-style-type: none"> • Validation, Testing, and Form Development: This section of the exam measures skills of Web Developers and covers the ability to validate code, test web pages for accuracy, and build form components. It includes understanding how to detect errors, ensure compliance with standards, and implement form fields with inline validation to improve user experience. The focus is on creating forms that work reliably, meet usability expectations, and maintain proper data entry flow.

주제 4	<ul style="list-style-type: none"> • Creating Adaptive Web Documents and Pages: This section of the exam measures skills of Front-End Designers and covers the techniques needed to make websites display correctly across traditional desktops and mobile devices. It emphasizes adaptive page layout, flexible formatting, and user-friendly presentation so that content remains readable and functional on screens of different sizes. Candidates are expected to show an understanding of how to create consistent designs that respond smoothly to device changes.

Web-Development-Applications 퍼펙트 최신 덤프 공부 - Web-Development-Applications 덤프문제집

KoreaDumps는 여러분이 WGU인증 Web-Development-Applications 시험 패스와 추후사업에 모두 도움이 되겠습니다. KoreaDumps 제품을 선택함으로써 여러분은 시간과 돈을 절약하는 일석이조의 득을 얻을 수 있습니다. WGU인증 Web-Development-Applications 인증 시험패스는 아주 어렵습니다. 자기에 맞는 현명한 학습자료 선택은 성공의 지름길을 내딛는 첫발입니다. 퍼펙트한 자료만이 WGU인증 Web-Development-Applications 시험에서 성공할 수 있습니다. KoreaDumps 시험문제와 답이야말로 퍼펙트한 자료이죠. KoreaDumps WGU인증 Web-Development-Applications 인증 시험자료는 100% 패스보장을 드립니다

최신 Courses and Certificates Web-Development-Applications 무료 샘플문제 (Q97-Q102):

질문 # 97

A web developer need to ensure that a message appears if the user's browser does not support the audio files on a web page. How should this designer code the audio element?

- A.

```
<audio>
  <source src="audio/song.mp3" type="audio/mp3" />
  No mpeg support.
</audio>
```
- B.

```
<audio alt="No mpeg support."
  <source src="audio/song.mp3" type="audio/mp3" />
</audio>
```
- C.

```
<audio>
  <source src="audio/song.mp3" type="audio/mp3" />
  <alt="No mpeg support." />
</audio>
```
- D.

```
<audio>
  <source src="audio/song.mp3" type="audio/mp3" alt="No mpeg support." />
</audio>
```

정답: A

설명:

To ensure that a message appears if the user's browser does not support the audio files on a web page, the developer should use the <audio> element correctly. The <audio> element supports fallback content, which is displayed if the browser does not support the specified audio formats.

* Correct Usage:

* Fallback Content: Place the message as fallback content inside the <audio> element. Browsers that do not support the audio format will display this message.

* Example:

```
<audio>
<source src="audio/song.mp3" type="audio/mp3" />
No mpeg support.
</audio>
```

* Explanation of Options:

* Option A: Incorrect. The alt attribute is not valid for the <source> element.

* Option B: Incorrect. The alt attribute is not valid for the <audio> element.

* Option C: Incorrect. The alt attribute is used incorrectly in the <audio> element.

* Option D: Correct. The message "No mpeg support." is placed correctly as fallback content inside the <audio> element.

:

W3C HTML5 Specification - The audio element

MDN Web Docs - <audio>

Using the fallback content inside the <audio> element ensures that users with unsupported browsers receive a meaningful message, improving the overall user experience.

질문 # 98

Which code segment contains a conditional expression?

- A. ``var result = count > 10 ? "Done" : getResult();``
- B. ``var result = aCount * 1000 == 3000000;``
- C. ``var result = dataCount;``
- D. ``var result = count++ > 10;``

정답: A

설명:

> "The conditional (ternary) operator `'? :'` is a shortcut for an `'if...else'` statement. It is the only operator in JavaScript that takes three operands: a condition followed by a question mark (?), an expression to execute if the condition is true, and another expression if false." Example:

```
```javascript
var result = condition ? value1 : value2;
```
```

References:

- * MDN Web Docs: Conditional (ternary) operator
- * ECMAScript Specification: ConditionalExpression

질문 # 99

Which feature was introduced in HTML5?

- A. Addition of CSS in the HTML file
- B. Ability to hyperlink to multiple web pages
- C. Adherence to strict XML syntax rules
- D. Native drag-and-drop capability

정답: D

설명:

HTML5 introduced several new features that enhanced web development capabilities significantly. One of the notable features is the native drag-and-drop capability.

* Native Drag-and-Drop Capability:

* Description: HTML5 allows developers to create drag-and-drop interfaces natively using the `draggable` attribute and the `DragEvent` interface. This means elements can be dragged and dropped within a web page without requiring external JavaScript libraries.

* Implementation:

* Making an Element Draggable: To make an element draggable, you set the `draggable` attribute to `true`:

```
<div id="drag1" draggable="true">Drag me!</div>
```

* Handling Drag Events: You use event listeners for drag events such as `dragstart`, `dragover`, and `drop`:

```
document.getElementById("drag1").addEventListener("dragstart", function(event) { event.dataTransfer.setData("text", event.target.id);
});
document.getElementById("dropzone").addEventListener("dragover", function(event) { event.preventDefault();
});
document.getElementById("dropzone").addEventListener("drop", function(event) { event.preventDefault(); var data = event.dataTransfer.getData("text"); event.target.appendChild(document.getElementById(data));
});
```

* Example: This example demonstrates a simple drag-and-drop operation:

html

Copy code

```
<div id="drag1" draggable="true">Drag me!</div>  
<div id="dropzone" style="width: 200px; height: 200px; border: 1px solid black;">Drop here</div>
```

:

W3C HTML5 Specification - Drag and Drop

MDN Web Docs - HTML Drag and Drop API

HTML5 Doctor - Drag and Drop

HTML5's native drag-and-drop feature streamlines the process of creating interactive web applications by eliminating the need for third-party libraries, thus making it a powerful addition to the HTML standard.

질문 # 100

What should a developer increase to create space between a border and content?

- A. Height
- **B. Padding**
- C. Width
- D. Margin

정답: B

설명:

Padding is the CSS property used to create space between the content of an element and its border. It is an internal spacing within the element.

* CSS Box Model:

* Content: The innermost part, where text and images appear.

* Padding: The space between the content and the border.

* Border: The edge of the element.

* Margin: The space outside the border, creating space between different elements.

* Usage:

* Padding:

```
div {  
padding: 20px;  
}
```

* This code adds 20 pixels of padding on all sides of the content within the div element.

* References:

* MDN Web Docs - Padding

* W3C CSS Box Model

질문 # 101

Given the following code:

```
Var a = "true";
```

What is the data type of d?

- **A. String**
- B. Object
- C. Boolean
- D. Undefined

정답: A

설명:

The data type of the variable is determined by the value assigned to it. In JavaScript, if a value is enclosed in double or single quotes, it is treated as a string.

* Variable Assignment:

* Given the code:

```
var a = "true";
```

* The value "true" is enclosed in double quotes, making it a string.

* Explanation:

* Option A: Boolean is incorrect because the value "true" is a string, not a boolean.

- * Option B: String is correct because the value is enclosed in double quotes.
- * Option C: Object is incorrect because the value is a primitive string
- * Option D: Undefined is incorrect because the variable is assigned a value.

:

MDN Web Docs - JavaScript Data Types

W3Schools - JavaScript Data Types

질문 # 102
