

VMCE_v12 Reliable Test Sample & Latest VMCE_v12 Test Simulator

The screenshot shows a digital test interface with a light gray background. At the top, a small blue text box contains the copyright notice: "©EVERLY 2024/2025 ALL RIGHTS RESERVED." Below this, a yellow header box contains the title: "Veeam Certified Engineer v12 VMCE_v12 Sample Questions And Answers (Guaranteed A+)" in black text. The main content area contains several questions and their options. The first question asks how a Veeam administrator creates a protection group for accounting servers. The options are: A. Create a protection group that reads a .csv file listing the accounting servers. B. Create a protection group and set it to automatically scan every three hours for new servers. C. Install a configuration file on each of the accounting servers that adds it to the protection group. D. Create an Active Directory based protection group targeted at an Active Directory security group. The correct answer is D, with a checkmark next to it. The second question asks which configuration restore mode should be used, with options A (Migrate), B (Planned failover), C (Restore), and D (Failover plan). The correct answer is A. The third question asks which restore method provides the fastest restore (RTO), with options A (Run Veeam file restore wizard and let it restore through VIX) and B (Start an Instant VM Recovery session and log on into the restored image to copy/paste the file to restore). The correct answer is B. At the bottom of the content area, there is a small navigation bar with icons for back, forward, and search.

Latest Veeam VMCE_v12 Test Simulator & Valid VMCE_v12 Test Sample

At the Itcerttest offer students Veeam VMCE_v12 practice test questions, and 24/7 support to ensure they do comprehensive preparation for the Veeam Certified Engineer v12 (VMCE_v12) exam. Itcerttest Veeam Certified Engineer v12 (VMCE_v12)

practice test material covers all the key topics and areas of knowledge necessary to master the Veeam Certification Exam.

Veeam VMCE_v12 Exam Syllabus Topics:

| Topic | Details |
|----------|---|
| Topic 1 | <ul style="list-style-type: none">Unstructured data backup: This section is about highlighting vital features required to protect unstructured data. |
| Topic 2 | <ul style="list-style-type: none">Enacting a recovery: This section is about getting practice in recovering various recoveries with diverse data. |
| Topic 3 | <ul style="list-style-type: none">Recovery scenarios and features: This section covers the impact of various recovery procedures and choosing the most viable recovery technique. |
| Topic 4 | <ul style="list-style-type: none">Replication: This section of the exam covers the description of use cases, architectures, and elements of replication jobs. |
| Topic 5 | <ul style="list-style-type: none">Virtual machine backup: This section of the exam covers protecting the VMware and Hyper V to safeguard VMware that follows SLAs. |
| Topic 6 | <ul style="list-style-type: none">Veeam Backup Enterprise Manager: The section describes the use cases for Veeam Backup Enterprise Manager. |
| Topic 7 | <ul style="list-style-type: none">Backup copies: This section ensures the process of recoverability and adheres to the 3-2-1 Rule with backup copy processes. |
| Topic 8 | <ul style="list-style-type: none">Verifying recoverability: This section of the exam covers the creation of automated tests to ensure recoverability from backups and replicas. |
| Topic 9 | <ul style="list-style-type: none">Incident Response Planning: This section of the exam covers integrating Veeam Backup and Replication into the incident response strategy. |
| Topic 10 | <ul style="list-style-type: none">Initial security considerations: This section defines ways and tools to secure the Veeam backup server. |
| Topic 11 | <ul style="list-style-type: none">Agent backup: This section of the exam covers the identification of protection groups for automating the installation of Veeam Agents. |
| Topic 12 | <ul style="list-style-type: none">Moving or copying backups: This section of the exam covers use cases for backup processes using VeeamMover. |
| Topic 13 | <ul style="list-style-type: none">Data protection strategies: This section of the exam covers an overview of data protection strategies. |
| Topic 14 | <ul style="list-style-type: none">Veeam Data Platform: This section deals with the identification and description of the goal of each major product in the Veeam Data Platform. |
| Topic 15 | <ul style="list-style-type: none">Backup data optimizations: This section covers the need for object storage to be backed up and the supported object storage solutions while utilizing repositories. |
| Topic 16 | <ul style="list-style-type: none">Transport modes: This section aims to analyze different methods to collect and read data from the production environment. |

Veeam Certified Engineer v12 Sample Questions (Q97-Q102):

NEW QUESTION # 97

Management asks a backup administrator to deploy the Veeam Agent on a number of Amazon EC2 instances running Windows and Linux operating systems. A Veeam Protection Group is also required by management. The Veeam Distribution Server does not have network access to these instances. What protection group type should be used to select these objects?

- A. Microsoft Active Directory objects
- B. Individual computers
- **C. Cloud machines**
- D. Computers listed in a CSV file

Answer: C

Explanation:

For deploying the Veeam Agent on Amazon EC2 instances running Windows and Linux operating systems without direct network access from the Veeam Distribution Server, the appropriate type of Protection Group to use is D: Cloud machines. The "Cloud machines" protection group type in Veeam Backup & Replication is specifically designed for protecting cloud-based workloads, including instances in public cloud environments like Amazon EC2. This protection group type allows the Veeam Agent to be deployed and managed remotely, even when the Veeam Distribution Server cannot directly access the instances over the network. It facilitates centralized management of backup tasks for cloud instances, ensuring that the EC2 instances are adequately protected as per management's request, despite the network accessibility constraints.

NEW QUESTION # 98

A Scale-out Backup Repository with one local extent has been configured as follows.

□ A daily VMware backup job retention is 31 days, keeping weekly GFS full backups for 14 weeks.

It is Mar, 20. A file from a backup that occurred the week of Jan, 1 must be recovered. Where is the data?

- **A. The capacity tier**
- B. The data is no longer in the Scale-out Backup Repository
- C. The performance tier
- D. The archive tier

Answer: A

Explanation:

Based on the configuration shown in the image, backups older than 21 days are moved to the capacity tier.

Since the VMware backup job retention is set for 31 days and keeps weekly GFS full backups for 14 weeks, the backup from the week of January 1st is older than 21 days but within the 14-week GFS retention policy.

Therefore, as of March 20, the backup data you need to recover would be in the capacity tier, not on the local performance tier, because it has been offloaded to the object storage configured as the capacity tier to reduce long-term retention costs.

NEW QUESTION # 99

An administrator is reviewing backup jobs and notices that backups of VMware VMs that are located on a SAN are taking longer than normal to back up. What could be a cause of this?

- **A. The backup proxy in use is failing over to Network mode.**
- B. The guest interaction proxy is failing over to data access mode.
- C. The backup repository needs to be changed to a Scale-out Backup Repository.
- D. The backup proxy in use is failing over to Virtual Appliance mode.

Answer: A

Explanation:

Explanation

When the backup proxy fails over to Network mode, it can impact the backup performance, especially for VMs located on a SAN. In Network mode, the backup traffic is transferred over the network rather than utilizing direct SAN access or VMware vStorage APIs for Data Protection (VADP). This can result in increased backup times due to the additional network overhead and slower data transfer rates.

NEW QUESTION # 100

In the war against ransomware, a company decided to implement tape backup. The infrastructure contains Hyper-V VMs. What is the correct approach to getting all servers onto tape?

- A. Create media pools, then create file to tape jobs.
- B. Create media sets, then create file to tape jobs.
- C. Create media sets, then create backup to tape jobs.
- D. **Create media pools, then create backup to tape jobs.**

Answer: D

Explanation:

Explanation

Tape backup jobs in Veeam Backup & Replication are created using the "backup to tape" functionality. This allows you to copy backups from disk-based repositories to tape media for long-term retention. To implement this approach, you would first create media pools. Media pools are logical containers that group tape media together. They define the available tape resources and their usage. Media pools can be configured based on specific criteria, such as tape type or capacity.

NEW QUESTION # 101

A company has separate networks for management traffic and data traffic. All Veeam components are communicating over the management network. How would they define the data network for backup data transfers?

- A. Update routing tables on the components involved in data transfer
- B. Create a global network traffic rule, set appropriate source and target IP range
- C. **Use the preferred network settings to switch to data network for the backup traffic**
- D. Re-add all Veeam components involved in data transfer through the required interfaces

Answer: C

Explanation:
