Topic 2	<ul style="list-style-type: none">• Infrastructure Security and Authentication: This section of the exam measures the skills of SAP IT Professionals and covers infrastructure security measures and authentication methods used in SAP environments. It emphasizes protecting systems from unauthorized access and ensuring secure user authentication.
Topic 3	<ul style="list-style-type: none">• User Administration: This section of the exam measures the skills of SAP Administrators and covers user administration tasks within SAP systems. It includes managing user accounts, roles, and profiles efficiently. A critical skill evaluated is maintaining accurate user records to support security and compliance efforts.
Topic 4	<ul style="list-style-type: none">• SAP Fiori Authorizations and SAP S• 4HANA: This section of the exam measures the skills of SAP Developers and covers authorization management specific to SAP Fiori applications within SAP S• 4HANA. It emphasizes configuring authorizations for Fiori apps to ensure appropriate access levels. A key skill assessed is understanding Fiori authorization concepts to enhance user experience.

SAP Certified Associate - Security Administrator Sample Questions (Q17-Q22):

NEW QUESTION # 17

In the administration console of the Cloud Identity Services, which system property types can you add? Note: There are 2 correct answers to this question.

- A. Internal
- B. Standard
- C. Default
- D. Credential

Answer: B,D

Explanation:

In the administration console of SAP Cloud Identity Services, administrators can add system property types to configure system behavior and integration settings. The Credential property type allows the definition of authentication credentials, such as usernames and passwords, for connecting to external systems or identity providers, ensuring secure communication. The Standard property type is used to configure general system settings, such as URLs, timeouts, or other operational parameters, that are essential for system functionality.

These property types enable flexible and secure management of identity services. Internal and Default are not recognized property types in this context; Internal may refer to system-internal configurations not exposed to administrators, and Default is not a specific property type but rather a concept for preconfigured values. This structure supports robust identity management across SAP's cloud ecosystem.

NEW QUESTION # 18

In the administration console of the Cloud Identity Services, which system property types can you add? Note: There are 2 correct answers to this question.

- A. Credential
- B. Standard
- C. Default
- D. Internal

Answer: B,D

NEW QUESTION # 19

Which entities share data with Business Partners in the S/4HANA Business User Concept? Note: There are 2 correct answers to this question.

- A. Employer
- B. User
- C. Administrator
- D. Employee

Answer: B,D

NEW QUESTION # 20

Which tool can you use to modify the entities schema content across multiple repositories?

- A. SAP BTP Account Explorer
- B. SAP Cloud Identity Services Schemas app
- C. SAP Business Application Studio
- D. SAP Cloud Identity Services Transformation Editor

Answer: B

Explanation:

The SAP Cloud Identity Services Schemas app is the tool used to modify entities schema content across multiple repositories in SAP's identity management framework. This app provides a centralized interface for defining and managing schema attributes, such as user or group properties, ensuring consistency across different identity repositories. Administrators can use it to customize schemas to meet specific organizational needs, supporting integration with various SAP and non-SAP systems. The SAP BTP Account Explorer is used for managing accounts and subaccounts, not schema modifications. The SAP Cloud Identity Services Transformation Editor focuses on data transformations during provisioning, not schema management. SAP Business Application Studio is a development environment for building applications, not for managing identity schemas. The Schemas app's ability to handle schema content across repositories ensures unified identity data structures, enhancing interoperability and security in SAP Cloud Identity Services, making it the ideal tool for this purpose.

NEW QUESTION # 21

Which of the following allow you to control the assignment of table authorization groups? Note: There are 2 correct answers to this question.

- A. SSM_CUST
- B. V_BRG_54
- C. PRGN_CUST
- D. V_DDAT_54

Answer: B,C

Explanation:

Table authorization groups control access to specific database tables, and their assignment can be managed through the following:
 * PRGN_CUST (A): Used to configure specific customization settings in SAP, including the assignment of table authorization groups.
 * V_BRG_54 (C): Provides access to maintain and view table authorization group assignments, aiding in security management.

SAP Security References:

- * SAP Help Portal: Role and Authorization Maintenance
- * SAP Table Authorization Group Configuration Guide

NEW QUESTION # 22

.....
