Test C_ACDET_2506 Prep, Reliable C_ACDET_2506 Learning Materials

Because the effect is outstanding, the C_ACDET_2506 study materials are good-sale, every day there are a large number of users to browse our website to provide the C_ACDET_2506 study guide materials, through the screening they buy material meets the needs of their research. Every user cherishes the precious time, seize this rare opportunity, they redouble their efforts to learn our C_ACDET_2506 Exam Questions, when others are struggling, why do you have any reason to relax? So, quicken your pace, follow the C_ACDET_2506 test materials, begin to act, and keep moving forward for your dreams!

SAP C_ACDET_2506 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Deploy and Migration: This part of the exam assesses the expertise of an SAP Deployment Specialist and focuses on the final deployment of the configured solution and the data migration process. Candidates should demonstrate a solid grasp of how to move configurations from a testing environment into production while minimizing disruption. It also includes knowledge of tools and strategies used for data extraction.

Topic 2	<ul style="list-style-type: none"> • Field Configuration: This domain evaluates the knowledge of an SAP Deployment Specialist and focuses on customizing and configuring business fields in the SAP system according to client-specific needs. This includes adjusting system settings for master data, transaction data, and other essential field-level controls to support business processes effectively. The section tests the candidate's ability to use configuration tools, apply SAP standard templates, and ensure that the field configurations align with the desired operational workflows of the business. It also touches upon validation, testing, and documenting the configuration changes made during the implementation.
Topic 3	<ul style="list-style-type: none"> • Project Overview, Roles and Responsibilities: This section of the exam measures the skills of an SAP Cloud Consultant and covers the fundamental understanding of SAP Activate methodology within the context of a cloud implementation project. Candidates are expected to be familiar with the project lifecycle, including phases such as Prepare, Explore, Realize, Deploy, and Run. This part also focuses on identifying key roles and responsibilities within a cloud project team, ensuring clarity in collaboration between consultants, clients, and SAP. It checks whether the consultant understands governance, stakeholder management, and the high-level structure of cloud deployment using SAP best practices.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q57-Q62):

NEW QUESTION # 57

Which of the following master data types requires manual migration from Test to Production in a Greenfield migration?

- A. Enumerations
- B. Relations and relation entries
- C. Translations
- D. Clause Library

Answer: A

Explanation:

In SAP Ariba Greenfield deployments, Enumerations (picklist value lists) require manual migration because they are not included in Intelligent Configuration Manager (ICM) bundles. Enumerations must be manually exported from Test and imported into Production to ensure correct picklist values for fields that depend on them.

Other master data types like Clause Library and Relations can be migrated using standard migration tools or processes. Translations are handled via AML & Translations Upload.

Ensuring enumerations are migrated correctly is critical because missing or inconsistent enumerations can cause field validation errors and disrupt system usage.

NEW QUESTION # 58

You can choose multiple field configurations and migrate them to the production site by creating a package in your test site.

Which of the following steps should be included? Note: There are 3 correct answers to this question.

- A. Make sure you update the string resource files in the production site before migrating the corresponding field configurations from test to production site.
- B. Publish the form template within the test site in order to add the form fields in the package.
- C. Discard any other packages that appear in My Action Items.
- D. The Flex Master Data (FMD) templates must be defined and their data should be loaded in the production site before migrating FMD custom fields.
- E. If you are migrating fields that are associated with enumerations, you should load those enumerations in the production site before migrating the fields.

Answer: A,D,E

NEW QUESTION # 59

During which SAP Activate Methodology phase do you migrate the configuration to Production?

- A. Deploy
- B. Push
- C. Migrate
- D. Move

Answer: A

Explanation:

The Deploy phase is when final cutover activities take place, including migrating configurations and master data to production, running final system tests, and performing the go-live. The other options are not standard SAP Activate phases for Ariba.

NEW QUESTION # 60

When you create a custom field, how do you define where the field is added?

- A. The field is added to a project header, identified by the templateClass ID
- B. Each field can be linked to multiple screens, identified via UI GroupClass ID
- C. The field is added to a class, identified by a class name
- D. The field is added to a class, identified by the record ID

Answer: C

Explanation:

In SAP Ariba, custom fields are associated with a specific class identified by its class name, such as ContractWorkspace or ProcureLineItem. This class-level association determines where the field is available within the application. When added to a parent class, the field inherits to all its subclasses, affecting all relevant data objects. The field is not linked via UI group IDs, project templates, or record IDs, which relate to different configuration aspects. This class-based design supports consistent data models and inheritance in SAP Ariba's architecture.

NEW QUESTION # 61

When you have created a new custom field and marked it as reportable, saved and published your changes, the field does not show up in your reports. How can you resolve the issue?

- A. You did not assign the custom field to the appropriate report category. Ensure that the field is linked to the correct category for it to appear in reports.
- B. You need to wait 2 hours for the schema to refresh. Any change to the object model will be automatically synchronized to SAP Ariba Analytics on regular intervals
- C. You created the custom field in a different module. Custom fields must be created in the same module where the reports are generated to show up correctly.
- D. You forgot to run the task Retrieve flexible fields metadata for reporting under Manage > Administration > Reporting Manager > Flex Field Reporting

Answer: D

NEW QUESTION # 62

.....

At the same time, our service guidelines have always been customer first. As long as you choose C_ACDET_2506 real exam, we will be responsible for you in the end. Every C_ACDET_2506 exam practice's staff member is your family they will accompany you to achieve your dream! Our company's service aim is to make every customer satisfied!
