Free PDF Quiz 2026 Salesforce-Data-Cloud: Salesforce Data Cloud Accredited Professional Exam–The Best Reliable Test Vce

In an increasingly competitive social life, we should keep up with the unpredictable world, regain our knowledge, and pursue decent work and a higher standard of living. If you have a Salesforce-Data-Cloud certificate, you will gain more competitive advantage and differentiate yourself from other job seekers. In this respect, Salesforce-Data-Cloud Study Guide is obviously your best choice. Salesforce-Data-Cloud certification training ' main advantage contains saving you a lot of time and improving your learning efficiency.

Before you really attend the Salesforce-Data-Cloud exam and choose your materials, we want to remind you of the importance of holding a certificate like this one. Obtaining a Salesforce-Data-Cloud certificate likes this one can help you master a lot of agreeable outcomes in the future, like higher salary, the opportunities to promotion and being trusted by the superiors and colleagues. All these agreeable outcomes are no longer dreams for you. And with the aid of our Salesforce-Data-Cloud Exam Preparation to improve your grade and change your states of life and get amazing changes in career, everything is possible. It all starts from our Salesforce-Data-Cloud learning questions.

Valid free Salesforce-Data-Cloud exam dumps collection - Salesforce Salesforce-Data-Cloud exam tests

To help customers pass the Salesforce Salesforce-Data-Cloud exam successfully. Dumps4PDF with 365 days updates. Valid Salesforce-Data-Cloud Salesforce-Data-Cloud exam dumps, exam cram and exam dumps demo. You can download these at a preferential price. We continually improve the versions of our Salesforce-Data-Cloud Exam Guide so as to make them suit all learners with different learning levels and conditions.

Salesforce Data Cloud Accredited Professional Exam Sample Questions (Q56-Q61):

NEW QUESTION # 56
Which tool allows users to visualize and analyze unified customer data in Data Cloud?

- A. Einstein Analytics
- B. Salesforce CLI
- C. Heroku
- D. Tableau

Answer: D

Explanation:
Salesforce Data Cloud Overview: Salesforce Data Cloud enables organizations to unify and manage customer data from multiple sources, providing a comprehensive view of customer interactions and behaviors.
Visualization and Analysis: For visualizing and analyzing this unified data, Salesforce provides multiple tools, each serving different purposes. Tableau is particularly noted for its advanced analytics and visualization capabilities.
Tableau Integration: Tableau is integrated with Salesforce, allowing users to create detailed and interactive visualizations. It can connect directly to Salesforce Data Cloud, pulling in unified data for comprehensive analysis.
Capabilities: Tableau supports a wide range of data sources and formats, offering drag-and-drop features to create complex charts and dashboards. This makes it an ideal tool for analyzing the rich datasets managed within Salesforce Data Cloud.

NEW QUESTION # 57
Which authentication type is supported for a Cloud File Storage activation target?

- A. Using access and secret keys
- B. Using JWT token
- C. Using private key certificate
- D. Using encrypted username and password

Answer: A

Explanation:
To create a Cloud File Storage activation target, you need to provide access and secret keys for authentication5. These keys are generated by your cloud storage provider, such as Amazon S3 or Google Cloud Storage.

NEW QUESTION # 58
Which two common use cases can be addressed with Data Cloud?
Choose 2 answers

- A. Harmonize data from multiple sources with a standardized and extendable data model.
- B. Understand and act upon customer data to drive more relevant experiences.
- C. Safeguard critical business data by serving as a centralized system for backup and disaster recovery.
- D. Govern enterprise data lifecycle through a centralized set of policies and processes.

Answer: A,B

Explanation:
Data Cloud is a data platform that can help customers connect, prepare, harmonize, unify, query, analyze, and act on their data across various Salesforce and external sources. Some of the common use cases that can be addressed with Data Cloud are: Understand and act upon customer data to drive more relevant experiences. Data Cloud can help customers gain a 360-degree view of their customers by unifying data from different sources and resolving identities across channels. Data Cloud can also help customers segment their audiences, create personalized experiences, and activate data in any channel using insights and AI. Harmonize data from multiple sources with a standardized and extendable data model. Data Cloud can help customers transform and cleanse their data before using it, and map it to a common data model that can be extended and customized. Data Cloud can also help customers create calculated insights and related attributes to enrich their data and optimize identity resolution.
The other two options are not common use cases for Data Cloud. Data Cloud does not provide data governance or backup and disaster recovery features, as these are typically handled by other Salesforce or external solutions.

NEW QUESTION # 59
Which method should an administrator use when performing aggregations in windows of 15 minutes on data collected via the Interactions SDK and Mobile SDK?

- A. Calculated Insight
- B. Activation
- C. Streaming Insight
- D. Segment

Answer: C

Explanation:
This method should be used when performing aggregations in windows of 15 minutes on data collected via the Interactions SDK and Mobile SDK. Streaming Insight allows you to query and aggregate data from real- time streams using window functions.

NEW QUESTION # 60
A company wants to include certain personalized fields in an email by including related attributes during the activation in Data Cloud. It notices that some values, such as purchased product names, do not have consistent casing in Marketing Cloud Engagement. For example, purchased product names appear as follows: Jacket, jacket, shoes, SHOES. The company wants to normalize all names to proper case and replace any null values with a default value.
How should a consultant fulfill this requirement within Data Cloud?

- A. Create one batch data transform per data stream.
- B. Use formula fields when ingesting at the data stream level.
- C. Create one batch data transform that creates a new DLO.
- D. Create a streaming insight with a data action.

Answer: C

Explanation:
To normalize purchased product names (e.g., converting casing to proper case and replacing null values with a default value) within Salesforce Data Cloud, the best approach is to create a batch data transform that generates a new DLO. Here's the detailed explanation:
Understanding the Problem :The company wants to ensure that product names in Marketing Cloud Engagement are consistent and properly formatted. The inconsistencies in casing (e.g., "Jacket," "jacket,"
"shoes," "SHOES") and the presence of null values need to be addressed before activation.
Why Batch Data Transform?
A batch data transform allows you to process large volumes of data in bulk, making it ideal for cleaning and normalizing datasets.
By creating a new DLO, you ensure that the original data remains intact while providing a clean, transformed dataset for downstream use cases like email personalization.
Steps to Implement This Solution :

Step 1: Navigate to the Data Streams section in Salesforce Data Cloud and identify the data stream containing the purchased product names.

Step 2: Create a new batch data transform by selecting the relevant data stream as the source.

Step 3: Use transformation functions to normalize the product names:

Apply the PROPER() function to convert all product names to proper case.

Use the COALESCE() function to replace null values with a default value (e.g., "Unknown Product").

Step 4: Configure the batch data transform to output the results into a new DLO . This ensures that the transformed data is stored separately from the original dataset.

Step 5: Activate the new DLO for use in Marketing Cloud Engagement. Ensure that the email templates pull product names from the transformed DLO instead of the original dataset.

Why Not Other Options?

A). Create a streaming insight with a data action: Streaming insights are designed for real-time processing and are not suitable for bulk transformations like normalizing casing or replacing null values.

B). Use formula fields when ingesting at the data stream level: Formula fields are useful for simple calculations but are limited in scope and cannot handle complex transformations like null value replacement.

Additionally, modifying the ingestion process may not be feasible if the data stream is already in use.

C). Create one batch data transform per data stream: This approach is inefficient and redundant. Instead of creating multiple transforms, a single batch transform can handle all the required changes and output a unified, clean dataset.

By creating a batch data transform that generates a new DLO, the company ensures that the product names are consistently formatted and ready for use in personalized emails, improving the overall customer experience.

NEW QUESTION # 61

......

Professional guidance is indispensable for a candidate. As a leader in the field, our Salesforce-Data-Cloud learning prep has owned more than ten years' development experience. Thousands of candidates have become excellent talents after obtaining the Salesforce-Data-Cloud certificate. If you want to survive in the exam, our Salesforce-Data-Cloud actual test guide is the best selection. Firstly, our study materials can aid you study, review and improvement of all the knowledge. In addition, you do not need to purchase other reference books. Our Salesforce-Data-Cloud Exam Questions are able to solve all your problems of preparing the exam. Of course, our study materials are able to shorten your learning time. You will have more spare time to do other things. And we can ensure you to pass the Salesforce-Data-Cloud exam.
