

Pass Guaranteed 2026 Reliable Mule-101: Valid Salesforce Certified MuleSoft Integration Foundations Test Cost

P.S. Free 2026 Salesforce Mule-101 dumps are available on Google Drive shared by Dumpleader: https://drive.google.com/open?id=1gJ_61VWyJg3A-xNsTDL6ni7IVZ5mcz99

Are you a new comer in your company and eager to make yourself outstanding? Our Mule-101 exam materials can help you. After a few days' studying and practicing with our products you will easily pass the Mule-101 examination. God helps those who help themselves. If you choose our Mule-101 Study Guide, you will find God just by your side. The only thing you have to do is just to make your choice and study. Isn't it very easy? So know more about our Mule-101 practice engine right now!

Salesforce Mule-101 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Explain the common technical complexities and patterns in integration development: This domain explores interaction patterns, composition patterns, API specifications, observability approaches, and deployment• application architecture comparisons.
Topic 2	<ul style="list-style-type: none">• Recognize and interpret essential integration concepts and terminology: This domain focuses on foundational concepts including cloud service models, infrastructure types, networking protocols, data formats, security principles, and API classifications.
Topic 3	<ul style="list-style-type: none">• Recognize common integration problems, use cases, and technical solutions: This domain examines integration scenarios, compares legacy and modern approaches, and guides selection of appropriate integration technologies for business problems.
Topic 4	<ul style="list-style-type: none">• Describe the components and benefits of Anypoint Platform for API management: This domain focuses on Anypoint Platform's API management features, lifecycle development, and advantages of API-led connectivity.

Latest Mule-101 Exam Objectives & Mule-101 Clearer Explanation

Are you one of them? Are you still worried and confused because of the the various exam materials and fancy training courses exam? Dupleader is the right choice for you. Because we can provide you with a comprehensive exam, including questions and answers. All of these will help you to acquire a better knowledge, we are confident that you will through Dupleader the Salesforce Mule-101 Certification Exam. This is our guarantee to all customers.

Salesforce Certified MuleSoft Integration Foundations Sample Questions (Q50-Q55):

NEW QUESTION # 50

An application load balancer routes requests to a RESTful web API secured by Anypoint Flex Gateway.

- A. SMTP
- B. SFTP
- **C. HTTPS**
- D. LDAP

Answer: C

Explanation:

RESTful APIs: By definition, REST relies on the HTTP protocol (Hypertext Transfer Protocol).

Security: When an API is "secured," it almost universally implies the use of TLS/SSL encryption, turning HTTP into HTTPS.

Load Balancers: Application Load Balancers (ALBs) operate at Layer 7 (Application Layer) and are designed to route HTTP/HTTPS traffic.

Why others are incorrect:

SMTP: Simple Mail Transfer Protocol (Email).

SFTP: Secure File Transfer Protocol (Files).

LDAP: Lightweight Directory Access Protocol (Identity/User lookup).

None of these are used for standard REST API routing.

NEW QUESTION # 51

According to MuleSoft, which system integration term describes the method, format, and protocol used for communication between two systems? 4

- A. Message
- **B. Interface**
- C. Interaction
- D. Component

Answer: B

NEW QUESTION # 52

According to MuleSoft, what action should an IT organization take regarding its technology assets in order to close the IT delivery gap?

- A. Create weekly meetings that all members of IT attend to present justification and request approval to use existing assets
- B. Focus project delivery efforts on custom assets that meet the specific requirements of each individual line of business
- C. Hire additional staff to meet the demand for asset creation required for approved projects and timelines
- **D. Make assets easily discoverable via a central repository**

Answer: D

Explanation:

The Key to Speed: You cannot close the delivery gap by working harder (hiring more staff) or by creating custom code for every project (custom assets). You must leverage Reuse.

Discoverability is Critical: Reuse is impossible if developers don't know that an asset exists.

Anypoint Exchange: By publishing assets (APIs, connectors, fragments) to a central repository (Exchange) and making them

searchable and documented, organizations enable "Self-Service." Developers can find what they need instantly, drastically reducing the time to deliver new projects.

NEW QUESTION # 53

During a planning session with the executive leadership, the development team director presents plans for a new API to expose the data in the company's order database. An earlier effort to build an API on top of this data failed, so the director is recommending a design-first approach.

- A. Adding global policies to the API so all developers automatically secure the implementation before coding anything
- **B. Developing a specification so consumers can test before the implementation is built**
- C. Publishing the fully implemented API to Exchange so all developers can reuse the API
- D. Building MUnit tests so administrators can confirm code coverage percentage during deployment

Answer: B

Explanation:

Design-First Approach: This methodology prioritizes creating the API contract (RAML/OAS) before writing any code¹⁹.

The Benefit: By defining the specification first and publishing it to Exchange (often with a Mocking Service), API consumers (frontend developers or other teams) can test and provide feedback on the design immediately.²⁰ This ensures the API meets business needs before the expensive work of backend implementation begins, preventing the failure described in the scenario^{21,22,23} Why others are incorrect:

Publishing fully implemented API (C): This is a "Code-First" approach (build first, share later).

Global Policies (B): Relates to governance, not the design methodology.

NEW QUESTION # 54

What are two reasons why a typical Mulesoft customer favors a Mulesoft-hosted Anypoint platform runtime plane over a customer-hosted runtime for its Mule application deployments?

- **A. Reduced time-to-market for the first application**
- B. Increased application throughput
- C. Reduced application latency
- D. Increased application isolation
- **E. Reduced IT operations effort**

Answer: A,E

Explanation:

MuleSoft-Hosted Runtime (CloudHub): This is an Integration Platform as a Service (iPaaS) model where MuleSoft manages the infrastructure.

Reduced IT Operations Effort (Option A): Because MuleSoft manages the physical servers, operating system updates, and patching, the customer's IT team does not need to maintain the hardware or VM infrastructure.

Reduced Time-to-Market (Option D): With a pre-configured environment ready for deployment, teams can deploy applications immediately without waiting for the provisioning of on-premises servers, load balancers, or network configurations.

NEW QUESTION # 55

.....

We have handled professional Mule-101 practice materials for over ten years. Our experts have many years' experience in this particular line of business, together with meticulous and professional attitude towards jobs. Their abilities are unquestionable, besides, Mule-101 practice materials are priced reasonably with three kinds. We also have free demo offering the latest catalogue and brief contents for your information, if you do not have thorough understanding of our materials. Many exam candidates build long-term relation with our company on the basis of our high quality Mule-101 practice materials.
