Crack the Salesforce Plat-Con-201 Exam with Confidence

You can practice all the difficulties and hurdles which could be faced in an actual Salesforce exam. It also assists you in boosting confidence and reducing problem-solving time. The Pass4future designs Plat-Con-201 desktop-based practice software for desktops, so you can install it from a website and then use it without an internet connection. You only need an internet connection to verify the license of the products. No other plugins are required to employ it.

Salesforce Certified Omnistudio Consultant Sample Questions (Q97-Q102):

NEW QUESTION # 97

A business has the following requirements:

- * To display cases for an account
- * The user should see all of the cases on the canvas
- * The user should be able to create a new case from the canvas

The consultant decides to use states to enable this functionality.

Which type of state should the consultant recommend to allow users to create a new case from the canvas?

- A. Edit Mode State
- **B. New Card State**
- C. Active Card State
- D. Blank Card State

Answer: B

Explanation:

The type of state that the consultant should recommend to allow users to create a new case from the canvas is New Card State. A New Card State is a state that allows creating new records in a FlexCard using an OmniScript or an Integration Procedure. The consultant can use a New Card State to enable users to create a new case from the canvas, by invoking an OmniScript or an Integration Procedure that writes data to the Case object in Salesforce.

NEW QUESTION # 98

An OmniScript saves data to Salesforce and to an external system. What OmniScript element could save all this data?

- A. HTTP Action
- **B. Integration Procedure Action**
- C. DataRaptor Post Action
- D. DataRaptor Transform Action

Answer: B

Explanation:

The OmniScript element that could save all this data is Integration Procedure Action. An Integration Procedure Action can execute an Integration Procedure that can combine multiple DataRaptor actions, such as Extract, Transform, and Load, and also invoke REST or SOAP services. This way, the Integration Procedure Action can write data to Salesforce using a DataRaptor Load action and to an external system using a REST or SOAP service.

NEW QUESTION # 99

A business wants to create a reusable OmniScript to capture customer payment information during the order process. The business decides that the first step of the payment process should include:

* Payment type (credit card or bank account)

* Payment amount

Which two elements should the consultant recommend for this step of the process?

Choose 2 answers

- **A. Currency**
- B. Number
- **C. Radio**
- D. Multi-select

Answer: A,C

Explanation:

The two elements that the consultant should recommend for this step of the process are: Radio and Currency.

A Radio element can display a list of options for the user to choose from, such as payment type. A Radio element allows only one option to be selected at a time, and can also have icons for each option. A Currency element can display a field for the user to enter a currency value, such as payment amount. A Currency element can also have validation and formatting options, such as minimum and maximum values, decimal places, etc.

NEW QUESTION # 100

An existing OmniScript used to capture and update customer information displays the following information on the same page:

- * Name
- * Age
- * Street
- * Last name
- * Postal code
- * Gender
- * State
- * Phone
- * City
- * Country
- * Email

Users report that the information displays in no specific order. Users experience errors when filling the information because it is not categorized. The process fails after submission because the mandatory fields are blank.

How can the consultant improve the user experience of the OmniScript?

- A. Use a template for each category and add custom code for the required validation
- B. Use a Section to break the information and a required icon in the input
- C. Use a Visualforce Page with the categories, labels, and the required validation
- **D. Use Block elements to group and required property checked in some of the inputs**

Answer: D

Explanation:

The consultant can improve the user experience of the OmniScript by using a Section element to break the information and a Headline element to add the title and a required icon in the input. A Section element can group related fields and elements in a logical way, making it easier for the user to navigate and fill the information. A Headline element can display a label and an icon for each field, indicating which ones are mandatory. This way, the OmniScript can display the information in a specific order and prevent errors and failures

NEW QUESTION # 101

Topic: Salesforce API

You want to display Chatter feeds, users, groups, and followers, especially in mobile applications.

Also, you want to provide programmatic access to files, recommendations, topics, notifications, and Data.com purchasing. Which of the following option should you use to do this?

- A. REST API
- B. Tooling API
- **C. Chatter REST API!**
- D. Streaming API
- E. Chatter SOAP API

Answer: C

Explanation:

The requirement involves displaying Chatter-related data (feeds, users, groups, followers) in mobile applications and providing programmatic access to additional features like files, recommendations, topics, notifications, and Data.com purchasing. The Chatter REST API is the most suitable Salesforce API for this purpose, making C the correct answer.

Here's why D. Chatter REST API is the correct answer:

* Chatter REST API Overview: The Chatter REST API is a specialized subset of the Salesforce REST API, optimized for social collaboration features. It provides access to Chatter-specific functionality (e.

g., feeds, posts, comments, groups, users, followers) and extends to related features like files (Chatter Files), recommendations, topics, notifications, and even Data.com purchasing integrations.

* Meeting the Requirements:

* Chatter Feeds, Users, Groups, Followers: The Chatter REST API offers endpoints like /chatter

/feeds, /chatter/users, /chatter/groups, and /chatter/users/{id}/followers to retrieve and display this data in a mobile app.

* Files: Use /chatter/files or /connect/files endpoints to access and manage Chatter Files.

* Recommendations: Access Chatter recommendations via /connect/recommendations.

* Topics: Manage topics with /connect/topics.

* Notifications: Handle notifications via /connect/notifications.

* Data.com Purchasing: The API supports Data.com-related calls (e.g., purchasing contact data) through specific endpoints like /connect/datacom

* Mobile Optimization: The REST-based architecture of the Chatter REST API is lightweight, uses JSON (or XML), and is ideal for mobile applications due to its stateless, HTTP-based design, aligning with the requirement's emphasis on mobile use.

* Programmatic Access: It provides full CRUD (create, read, update, delete) capabilities for Chatter data and related features, meeting the need for programmatic control.

Now, let's examine why the other options are incorrect:

* A. Streaming API: The Streaming API is for real-time push notifications (e.g., subscribing to record updates via PushTopics or Platform Events). It's not designed for retrieving Chatter feeds, files, or Data.

com data, nor is it suited for general mobile display purposes-it's event-driven, not data-access- focused.

* B. REST API: The broader Salesforce REST API (e.g., /services/data/vXX.X/) can access some Chatter data (e.g., via sObjects like FeedItem), files, and notifications, but it's not specialized for Chatter or Data.com purchasing. The Chatter REST API is a tailored extension of this, offering more specific endpoints and better usability for Chatter-related tasks, making it the better fit.

* C. Tooling API: The Tooling API is for managing metadata and developer tools (e.g., Apex classes, triggers), not for accessing Chatter data, files, or Data.com features. It's irrelevant to this requirement.

* E. Chatter SOAP API: There's no "Chatter SOAP API" in Salesforce-SOAP API exists for general sObject operations, but Chatter-specific features are handled via REST (Chatter REST API). SOAP is less mobile-friendly due to its XML-heavy, stateful nature, making this option incorrect and outdated.

References:

* Salesforce Chatter REST API Developer Guide: Overview - Lists supported features like feeds, files, topics, and Data.com integration.

* Salesforce REST API Developer Guide: Chatter Resources - Details Chatter-specific endpoints in the REST framework.

NEW QUESTION # 102

.....

Generally speaking, Salesforce certification has become one of the most authoritative voices speaking to us today. Let us make our life easier by learning to choose the proper Plat-Con-201 test answers, pass the Plat-Con-201 exam, obtain the certification, and be the master of your own life, not its slave. Our Plat-Con-201 Exam Questions are exactly what you are looking for. With three different versions of Plat-Con-201 exam study materials are shown on our website, so you will be glad to know you have so many different ways to study.

Plat-Con-201 Sample Questions: <https://www.examdisscuss.com/Salesforce/exam/Plat-Con-201/>

Many applicants remain unsuccessful in locating the right Salesforce Certified Omnistudio Consultant (Plat-Con-201) practice test and lose their time and money, Besides, it has no limitation of the number you installed, Free demo of ExamDiscuss Plat-Con-201 exam questions exam material allowing you to try before you buy, I can assure you that with the help of our Plat-Con-201 testking training you can pass the exam as well as getting the IT certification with the minimum of time and efforts.

Build location-aware apps that use Bing Maps and location services, You can put all your queries and get a quick and efficient response as well as advice of our experts on Plat-Con-201 certification tests you want to take.
