Cisco Understanding Cisco Cybersecurity Operations Fundamentals Sample Questions (Q438-Q443):

NEW QUESTION # 438

Refer to the exhibit.

What is the potential threat identified in this Stealthwatch dashboard?

- A. A host on the network is sending a DDoS attack to another inside host.
- B. A policy violation is active for host 10.201.3.149.
- C. There are three active data exfiltration alerts.
- D. A policy violation is active for host 10.10.101.24.

Answer: C

Explanation:

Explanation

"EX" = exfiltration

And there are three.

Also the "suspect long flow" and "suspect data heading" suggest, for example, DNS exfiltration

NEW QUESTION # 439

Which attack is the network vulnerable to when a stream cipher like RC4 is used twice with the same key?

- A. forgery attack
- B. ciphertext-only attack
- C. meet-in-the-middle attack
- D. plaintext-only attack

Answer: B

Explanation:

When a stream cipher like RC4 is used twice with the same key, it becomes vulnerable to a ciphertext-only attack. In this type of attack, the attacker has access to several ciphertexts that are encrypted with the same key but does not know anything about the plaintexts. By analyzing these ciphertexts, an attacker can gain insights into the plaintext or even recover parts or all of it. NEW QUESTION # 440

Which event is user interaction?

- A. reading and writing file permission
- B. executing remote code
- C. gaining root access
- D. opening a malicious file

Answer: D

Explanation:

User interaction is any event that requires the user to perform an action that enables or facilitates a cyberattack. Opening a malicious file is an example of user interaction, as it can trigger the execution of malicious code or malware that can compromise the system or network. Gaining root access, executing remote code, and reading and writing file permissions are not user interactions, but rather actions that can be performed by an attacker after exploiting a vulnerability or bypassing security controls.
