

# SCAIP Prüfungs - SCAIP Prüfung

In vielen Situationen erwerben wir noch keine zufriedenstellende Wirkung, wenn wir viel Geld und Zeit ausgeben. Die richtige Methode spielt eine entscheidende Rolle. Wir ExamFragen Team widmet sich, die beste Methode für Sie zu entwickeln, Saviynt SCAIP Prüfung zu bestehen. Von dem Punkt, wenn Sie unsere Saviynt SCAIP Prüfungsunterlagen auswählen, bieten wir Ihnen umfassende Garantien. Kostenlose Probe vor dem Kauf, Bezahlungssicherheit beim Kauf, einjährige kostenlose Aktualisierung nach dem Kauf der Saviynt SCAIP Unterlagen und die volle Rückerstattung für den Durchfall der Saviynt SCAIP Prüfung usw. Alle zusammen sind unsere Expression der Garantie für die Interesse der Kunden.

## Saviynt SCAIP Prüfungsplan:

Thema	Einzelheiten
Thema 1	<ul style="list-style-type: none"> <li>Analytics: This section focuses on building, configuring, and delivering reports, analytic controls, and dashboards to support data-driven identity governance decisions.</li> </ul>
Thema 2	<ul style="list-style-type: none"> <li>Segregation of Duties: This section addresses identifying, preventing, and remediating SOD conflicts using rulesets, mitigating controls, and both preventative and detective analysis methods.</li> </ul>
Thema 3	<ul style="list-style-type: none"> <li>Building Identity Warehouse: This section covers setting up the foundation of Saviynt by importing users, onboarding applications, and managing roles and access within the identity warehouse.</li> </ul>
Thema 4	<ul style="list-style-type: none"> <li>Rules Engineering: This section covers creating and managing automated access policies and rules that handle joiner, mover, and leaver scenarios through technical and user update rules.</li> </ul>
Thema 5	<ul style="list-style-type: none"> <li>Access Request System: This section focuses on configuring and managing the end-to-end access request process, including workflows, approvals, and provisioning for both connected and disconnected applications.</li> </ul>

## SCAIP Prüfung, SCAIP Kostenlos Downloden

ExamFragen wird nicht nur Ihren Wunsch erfüllen, sondern Ihnen einen einjährigen kostenlosen Update-Service und Kundendienst bieten. Die Prüfungsfragen von ExamFragen sind alle richtig, die Ihnen beim Bestehen der Saviynt SCAIP Zertifizierungsprüfung helfen. Im ExamFragen können Sie kostenlos einen Teil der Fragen und Antworten zur Saviynt SCAIP Zertifizierungsprüfung als Probe herunterladen.

### Saviynt Certified Advanced IGA Professional (Level 200) SCAIP Prüfungsfragen mit Lösungen (Q58-Q63):

#### 58. Frage

Which among these is NOT a valid parameter under ImportAccountEntJSON in REST connector?

- A. accountOwnerParams
- B. entOwnerParams
- C. entitlementParams
- D. accountParams

**Antwort: B**

Begründung:

In Saviynt EIC REST connector configuration, ImportAccountEntJSON is used to define how account and entitlement data are imported (reconciled) from a target system. This JSON structure includes several predefined and supported parameters that control how accounts, entitlements, and their ownership relationships are processed.

accountParams (Option C) is a valid parameter and is used to map account-level attributes such as account name, status, and identifiers. entitlementParams (Option B) is also valid and defines how entitlement data (groups, roles, permissions) are fetched and mapped. accountOwnerParams (Option A) is another valid parameter used to define account ownership mapping, helping assign owners to accounts during reconciliation.

However, entOwnerParams (Option D) is NOT a valid parameter in the ImportAccountEntJSON structure. The correct naming convention for entitlement ownership (if applicable) does not use "entOwnerParams" in Saviynt REST connector configuration. Saviynt follows strict parameter naming standards, and incorrect parameter names will not be recognized or processed by the connector.

Thus, Option D is the correct answer, as it represents an invalid configuration parameter in the context of ImportAccountEntJSON.

#### 59. Frage

Which of the following scenarios are True to trigger Technical Rule Execution in EIC? (Multi-Select)

- A. When a user is deleted and the condition in the rule matches
- B. When users are imported through Import Job and the condition in the rule matches
- C. The existing user is updated and satisfies a user update rule with action as Re-run provisioning rules
- D. A new user is registered or created from the UI and the condition in the rule matches

**Antwort: B,C,D**

Begründung:

In Saviynt EIC, Technical Rules are triggered based on lifecycle events related to user creation, updates, and imports, provided the defined conditions evaluate to true. The correct answers are B, C, and D.

Option B is correct because during Import Jobs, when users are brought into Saviynt from authoritative sources, Technical Rules are evaluated, and if conditions match, they are executed. This is a common mechanism for provisioning access during onboarding.

Option C is also correct since when a new user is created via the UI, Technical Rules can be triggered if the user attributes meet the rule conditions. This ensures consistent provisioning regardless of how users are created.

Option D is correct because when an existing user is updated, and a User Update Rule is configured to re-run provisioning rules, it can trigger associated Technical Rules again.

Option A is incorrect because deletion events typically trigger deprovisioning workflows rather than standard Technical Rule execution.

Thus, Technical Rules are triggered during import, creation, and update events-not deletion.

#### 60. Frage

Which statement correctly describes the two major ServiceNow integration modes supported by Saviynt?

- A. Both modes are the same and serve identical purposes.
- B. ServiceNow as a Managed Application is used only for SAV roles; ServiceNow as a Ticketing System is used only for password sync.
- **C. ServiceNow as a Managed Application supports import, provisioning, and deprovisioning; ServiceNow as a Ticketing System supports ticket-based ITSM integration.**
- D. ServiceNow as a Managed Application is only for branding and labels; ServiceNow as a Ticketing System is only for analytics.

**Antwort: C**

Begründung:

The correct answer is A . Saviynt documentation describes two major ServiceNow integration models:

ServiceNow as a Managed Application and ServiceNow as a Ticketing System . The managed application model is used for application-style integration, including reconciliation or import and provisioning or deprovisioning activities. The ticketing system model is used when ServiceNow functions as the ITSM workflow and ticket platform connected to Saviynt request processing. This distinction is repeatedly emphasized in the ServiceNow integration overview documentation.

Saviynt further notes that integration with ServiceNow is required to perform reconciliation, provisioning, and deprovisioning tasks, and separately documents ServiceNow as a ticketing system for request-related use cases. That means the two modes are complementary but not identical. Option D is therefore wrong because the modes serve different architectural purposes. Options B and C are incorrect because branding, analytics- only usage, SAV-role-only usage, and password-sync-only behavior do not describe the documented ServiceNow integration patterns. For Level 200 exam preparation, this is a high-value distinction: choose Managed Application when ServiceNow is the governed target system, and Ticketing System when ServiceNow is the ITSM workflow engine around Saviynt processes

### 61. Frage

In EIC, how is the accountname for the service account created? (Multi-Select)

- A. As defined in Global Configurations - > Account Name Rule
- **B. As defined in Endpoint - > Service Account Name Rule**
- C. Enter Manually while requesting a service account
- **D. As defined in Connection - > Create Account JSON**

**Antwort: B,D**

Begründung:

In Saviynt EIC, the service account name generation is controlled through configuration-driven mechanisms to ensure consistency, automation, and compliance with naming standards.

Option A is correct because administrators can define naming conventions at the Endpoint level using the Service Account Name Rule. This allows dynamic generation of account names based on attributes such as application name, environment, or other identifiers, ensuring standardized naming across systems.

Option D is also correct since in many connector-based integrations, the Create Account JSON configuration plays a role in provisioning. The account name can be derived or constructed within this JSON payload based on defined mappings and logic, especially for REST or custom connectors.

Option B is incorrect because service account creation in Saviynt is typically controlled and standardized; manual entry of account names is generally restricted or governed to avoid inconsistencies. Option C is incorrect because Global Configurations do not directly define service account naming rules in standard implementations.

Thus, the correct answers are Endpoint-based naming rules and Connection-level JSON configuration, ensuring automated and consistent service account naming.

### 62. Frage

Administrator created a custom SAV role, ROLE\_CUSTOM\_READ, with the "Read Only" option set to true.

If the user is assigned both ROLE\_ADMIN and ROLE\_CUSTOM\_READ, what actions can the user perform?

- A. User can only view all EIC configurations
- B. It depends; the access defined in the SAV Role that was assigned later takes precedence over the other
- **C. User will have full view/edit access as user is part of ROLE\_ADMIN**
- D. User can only view/edit the modules as mapped under Features for ROLE\_CUSTOM\_READ

## Antwort: C

### Begründung:

In Saviynt EIC, SAV Roles are additive in nature, meaning that when a user is assigned multiple roles, the system grants the union of all permissions across those roles. There is no restrictive override where one role limits another; instead, the highest level of access prevails.

In this scenario, the user is assigned both ROLE\_ADMIN and ROLE\_CUSTOM\_READ (Read Only). While ROLE\_CUSTOM\_READ restricts access to read-only, the ROLE\_ADMIN role provides full administrative privileges, including both view and edit capabilities across modules.

Saviynt does not enforce precedence based on role assignment order, nor does a read-only role override an admin role. Instead, permissions are cumulative, and the most permissive access is effectively granted.

Therefore, Option D is correct: the user will have full view and edit access because ROLE\_ADMIN includes comprehensive permissions that supersede the limitations of the read-only role.

This behavior ensures flexibility in role assignments but also requires careful governance to avoid over-provisioning of administrative access.

## 63. Frage

.....

Mit Saviynt SCAIP Zertifikat können Sie Ihre Berufsaussichten verbessern und viele neuen Chancen erschließen. ExamFragen ist eine geeignete Website für die Kandidaten, die an der Saviynt SCAIP Zertifizierungsprüfung teilnehmen. Es wird nicht nur alle Informationen zur Saviynt SCAIP Zertifizierungsprüfung, sondern Ihnen auch eine gute Lernchance bieten. ExamFragen wird Ihnen helfen, die Saviynt SCAIP Zertifizierungsprüfung ganz einfach zu bestehen.
