問題 #85

To ensure enough bandwidth for other applications, you want to restrict all replication bandwidth on your destination cluster. How would you accomplish this task?

- A. Using OnCommand System Manager on your source cluster, create a QoS policy on the source.
- **B. Using the ONTAP CLI, enable global throttling on the source cluster.**
- C. Using the ONTAP CLI, enable global throttling on the destination cluster.
- D. Using OnCommand System Manager on your destination cluster, create a QoSpolicy on the destination cluster.

答案: B

問題 #86

Your customer wants to ensure that the SnapMirror relationships are easily managed in a bidirectional, multi-cluster environment. Which version of clustered Data ONTAP would you recommend?

- A. clustered Data ONTAP 8.3
- **B. clustered Data ONTAP 9.1**
- C. clustered Data ONTAP 8.2.3
- D. clustered Data ONTAP 8.1.4

答案: B

問題 #87

A customer wants to replicate between their two NetApp ONTAP clusters but is concerned that replication traffic might slow down normal data traffic. They still have two unused network ports on every node. You recommend using dedicated ports for the Intercluster LIFs, and you are tasked with creating the Intercluster LIFs so that they are on dedicated ports at all times. Which command must you use before creating InterCluster LIFs?

- A. network interface failover-groups create
- **B. network interface service-policy create**
- C. network ipspace create -ipSPACE
- D. system services firewall policy create

答案： B

解題說明：

To ensure Intercluster LIFs are bound to dedicated ports and used only for replication traffic, you must first create a service policy that defines the LIF's role (e.g., intercluster). The network interface service-policy create command allows you to specify that the LIF is intended strictly for intercluster services, ensuring it's isolated from data traffic.

問題 #88

You have just deployed a new AFF A400 cluster running ONTAP 9.7 that currently has no data aggregates created. You want to ensure that all new data aggregates are encrypted before you migrate production data to the new AFF A400 cluster. In this scenario, which two actions would you use to accomplish this task? (Choose two.)

- **A. After you create a data aggregate, verify that it is encrypted by default.**
- B. Ensure that the AFF A400 has self-encrypting drives.
- **C. After you create data aggregates, convert them to a NetApp Aggregate Encryption aggregate including root aggregates.**
- D. Ensure that you have the NetApp Volume Encryption license installed.

答案： A,C

問題 #89

You want to set up protection relationships at the time of provisioning one or more primary volumes in the source cluster in ONTAP. Which NetApp management tool enables you to accomplish this task?

- A. OnCommand Unified Manager
- B. SnapCenter
- C. ONTAPCLI
- **D. OnCommand System Manager**

答案： D
