## 101-500 Most Reliable Questions & 101-500 Reliable Exam Prep

The study material to get LPIC-1 Exam 101, Part 1 of2, version 5.0 should be according to individual's learning style and experience. Real Lpi 101-500 Exam Questions certification makes you more dedicated and professional as it will provide you complete information required to work within a professional working environment. These questions will familiarize you with the 101-500 Exam Format and the content that will be covered in the actual test. You will not get a passing score if you rely on outdated practice questions.

## Lpi LPIC-1 Exam 101, Part 1 of 2, version 5.0 Sample Questions (Q66-Q71):

### NEW QUESTION # 66

What is the effect of the egrep command when the -v option is used?

- A. It changes the output order showing the last matching line first.
- B. It shows the command's version information.
- C. It enables color to highlight matching parts.
- **D. It only outputs non-matching lines.**

**Answer: D**

Explanation:

Explanation

The -v option for the egrep command activates the invert matching mode, which means that it only outputs the lines that do not match the given pattern or regular expression. This is useful for filtering out unwanted lines or finding exceptions in a file. For example, the following command will output all the lines in the file my\_text that do not contain the word "Linux":

```
egrep -v Linux my_text
```

The -v option can be combined with other options to modify the output format or behavior of the egrep command. For example, the -c option will count the number of non-matching lines instead of printing them, and the -i option will ignore the case of the pattern while matching. References:

#### NEW QUESTION # 67

You have just upgraded your PC to a 60 gigabyte IDE drive. While partitioning the drive, you notice that only 32 gigabytes are available. Which of the following will most likely allow you to use the entire drive?

- A. Create a partition that resides entirely below the first 1024 cylinders.
- B. Use GRUB or the latest version of LILO as a bootloader.
- C. Upgrade the PC BIOS to the latest version available.
- D. Set the PC BIOS to use LBA mode.
- E. Create two smaller partitions of 30 gigabytes each.

**Answer: C**

#### NEW QUESTION # 68

In Bash, inserting 1>&2 after a command redirects

- A. standard output to standard input.
- B. standard output to standard error.
- C. standard input to standard error.
- D. standard error to standard output.
- E. standard error to standard input.

**Answer: B**

Explanation:

In Bash, inserting 1>&2 after a command redirects standard output to standard error. This means that the output of the command that normally goes to the standard output stream (file descriptor 1) will be sent to the standard error stream (file descriptor 2) instead. This can be useful if we want to capture or discard both the normal output and the error output of a command. For example, if we want to run a command and send both its output and error to /dev/null (a special device that discards any data written to it), we can use:

```
command > /dev/null 1>&2
```

This will redirect the standard output of command to /dev/null, and then redirect the standard error of command to the same place as the standard output, which is /dev/null. The other options are not correct because:

\* A. standard error to standard input: This is not possible, because standard input is a read-only stream, and we cannot redirect output to it.

\* B. standard input to standard error: This is not what 1>&2 does, because 1 refers to standard output, not standard input. To redirect standard input to standard error, we would need to use 0>&2, where 0 refers to standard input.

\* D. standard error to standard output: This is not what 1>&2 does, because it would require the opposite order of file descriptors: 2>&1. This would redirect standard error to standard output, not the other way around.

\* E. standard output to standard input: This is not possible, for the same reason as option A. References:

#### NEW QUESTION # 69

Which of the following commands list all files and directories within the /tmp/directory and its subdirectories which are owned by the user root? (Choose two.) find /tmp -user root -print

- A. find -path /tmp -uid root
- B. find -path /tmp -user root -print
- C. find /tmp -user root
- D.

- E. find /tmp -uid root -print

**Answer: A,B**

### NEW QUESTION # 70

What umask will set the file permissions on a newly created file to -rw-r--r-- (644)?

- A. 0002
- B. 0022
- C. 0224
- D. 0246

**Answer: B**

### NEW QUESTION # 71

.....

The pass rate is 98.75% for 101-500 exam braindumps, and you can pass your exam in your first attempt if you choose us. Many candidates have recommended our 101-500 exam materials to their friends for the high pass rate. In addition, we are pass guarantee and money back guarantee if you fail to pass the exam. 101-500 Exam Braindumps cover most of knowledge points for the exam, and you can increase your professional ability in the process of learning. We offer you free update for 365 days for 101-500 training materials after payment, and the update version will be sent to your email automatically.
