

Useful 3V0-21.25 Valid Dumps Sheet Provide Prefect Assistance in 3V0-21.25 Preparation

Download Valid 3V0-21.25 Dumps For Best Preparation

1.A Security Operator is troubleshooting a new vCenter Cloud Account connection. The connection validation fails immediately.
The operator reviews the error details in the Provider Portal:
Error Message
"The connection to the endpoint 'vcsa-01.corp.local' failed.
Reason: sun.security.validator.ValidatorException: PKIX path building failed:
unable to find valid certification path to requested target."
What is the root cause of this error?
A. The firewall is blocking port 443.
B. The credentials used for the vCenter account are incorrect.
C. The vCenter Server provided a certificate, but VCF Automation does not trust the Certificate Authority (CA) that signed it.
D. The vCenter Server is down.
Answer: C

2.An Automation Developer is troubleshooting a validation error in a Cloud Template. The goal is to set the memory of a machine to 4GB. The validation fails with a syntax error.
Review the following YAML snippet from the blueprint:
Blueprint YAML
resources:
 WebVM:
 type: Cloud.Machine
 properties:
 image: ubuntu
 flavor: medium
 memory: 4096 MB
 networks:
 - name: default
What is the cause of the validation error in this configuration?
A. The image property must be a URL.
B. The networks list is empty.
C. The flavor property is missing.
D. The memory property is not a valid property for Cloud.Machine when a flavor is already specified.
Answer: D

3.A Service Designer needs to create a multi-level approval workflow for a sensitive "Database-as-a-Service" catalog item.
Requirements
1. Level 1: The requester's immediate manager must approve the cost.
2. Level 2: After the manager approves, the Security Team must approve the network placement.
3. If Level 1 is rejected, the request must stop immediately.
Which approach correctly configures this sequential approval logic within Service Broker? (Choose 2.)
A. Create a single Approval Policy with two separate items in the "Approvers" list, relying on the default "Any" logic.

DumpsQuestion is a leading platform that is committed to preparing the VMware 3V0-21.25 certification exam candidates in a short time period. These VMware 3V0-21.25 exam dumps are designed and verified by experienced and certified exam trainers. They put all their efforts to maintain the top standard of VMware 3V0-21.25 Exam Questions all the time. latest real exam and exam questions offered by DumpsQuestion, with free updates for 365 days.

VMware 3V0-21.25 Exam Syllabus Topics:

Section	Weight	Objectives
Topic 1: Install, Configure, Adminstrate the VMware Solution	30%	- Manage content libraries, images and subscriptions - Manage provider portals and organizations - Deploy and manage blueprints and service catalog - Automation workflows and Orchestrator management - Configure integrations and governance policies
Topic 2: VMware Products and Solutions	20%	- Supervisor-based NSX networking - vSphere Supervisor architecture and components - VMware Aria Automation components

Topic 3: Operation Management and Troubleshooting	15%	- Optimize performance and availability - Troubleshoot automation workflows and integrations - Monitor automation services and environments
Topic 4: Plan and Design the VMware Solution	20%	- Resource and capacity planning - Security and compliance design - Design VCF automation environments
Topic 5: IT Architectures, Technologies, Standards	15%	- Virtualization, containerization and automation technologies - Cloud and distributed system architectures - Industry standards, frameworks and protocols

3V0-21.25 - Advanced VMware Cloud Foundation 9.0 Automation Updated Valid Dumps Sheet

Our 3V0-21.25 valid study guide is edited by our IT professional experts and focus on providing you with the most updated study material for all of you. You will pass your 3V0-21.25 actual test in your first attempt. With the help of VMware 3V0-21.25 Current Exam Content, you will be more confident and positive to face your coming test. After you get your 3V0-21.25 certification, you will be getting close to your dream.

VMware Advanced VMware Cloud Foundation 9.0 Automation Sample Questions (Q81-Q86):

NEW QUESTION # 81

Which statement correctly describes the relationship between a Project and an Organization in VCF 9.0?

- A. An Organization can belong to multiple Projects to share resources.
- B. There is no relationship; they are independent management silos.
- **C. A Project is a sub-construct of an Organization used to group users and entitle them to specific resources.**
- D. Projects are managed in SDDC Manager, while Organizations are managed in the vSphere Client.

Answer: C

Explanation:

In the VCF 9.0 governance hierarchy, the Organization acts as the top-level administrative and billing boundary, while the Project serves as the granular operational unit. Every Project must reside within a single Organization. The Project is the primary mechanism for Role-Based Access Control (RBAC) and resource entitlement. Within a Project, the administrator maps Cloud Zones or Namespace Classes to specific sets of users and groups. This allows a large organization (e.g., "Engineering") to have multiple projects (e.g., "Project Alpha" and "Project Beta") with different resource limits and user permissions, all while sharing the same underlying organizational settings, identity providers, and regional infrastructure. Projects also allow for the isolation of Cloud Templates (blueprints); a template created in Project Alpha is not visible or deployable by users in Project Beta unless it is explicitly shared through the Service Broker catalog.

NEW QUESTION # 82

An administrator has been tasked with creating a Day 2 Operation which invokes vMotion migration on a virtual machine (VM). Which two steps are required? (Choose two.)

- **A. Call the pre-defined Orchestrator workflow named Migrate virtual machine with vMotion.**
- B. Create an ABX action named Migrate virtual machine with vMotion.
- **C. Create a resource action.**
- D. Create an Orchestrator action.
- E. Drag and drop the User Interaction schema element.
- F. Create a blueprint named Migrate virtual machine with vMotion.

Answer: A,C

Explanation:

A Day 2 operation that triggers vMotion is implemented by calling an existing Orchestrator workflow that performs the migration and exposing it as a Resource Action. This allows the operation to be executed against deployed virtual machines in a controlled, reusable way within VCF Automation.

NEW QUESTION # 83

An administrator must initiate the deployment of a new 3-tier application architecture using the VMware Cloud Foundation (VCF) Automation portal.

This application includes:

- A web tier (stateless).
- A business logic tier (some local caching).
- A database tier (stateful, PostgreSQL).
- An NSX load balancer fronting the web tier.
- ~99.9% uptime requirement.
- Moderate performance requirements.

Which requirement represents a risk inherent to single-zone deployments?

- **A. A shared failure domain for all application tiers.**
- B. A split-brain isolation.
- C. A higher latency between application tiers.
- D. A higher network complexity.

Answer: A

Explanation:

In a single-zone deployment, all application tiers reside within the same failure domain. If that zone experiences an outage, the entire application stack becomes unavailable, directly impacting availability requirements such as 99.9% uptime.

NEW QUESTION # 84

An administrator is tasked with configuring a multi-tenant environment within the organization's VMware Cloud Foundation (VCF) deployment. Requirements are:

- isolated network spaces for development and testing.
- dedicated resources.
- role based access control.

Which of the actions satisfies the requirement?

- A. Define and allocate IP blocks and quotas at the organization level, which will then be selected and consumed by users at deployment.
- B. Grant full administrative access for one responsible user in each department to create and manage their own network configurations.
- **C. Define and allocate IP blocks and quotas at the organization level, which will then be consumed by the NSX VPCs created by the different departments.**
- D. Create an NSX backed VLAN segment per department.
- E. Configure firewall rules at the datacenter edge level to isolate traffic between departments.

Answer: C

Explanation:

Defining and allocating IP blocks and quotas at the organization level enables creation of separate NSX VPCs for each department, providing isolated network spaces. These VPCs also support resource allocation and integrate with role-based access control, satisfying all multi-tenancy requirements.

NEW QUESTION # 85

An administrator has been tasked with creating one organization with the following characteristics:

- Connect directly to one or more vSphere clusters.
- Do not use the Supervisor.
- No sharing of infrastructure resources with other organizations.

How can the administrator meet these requirements through the Provider Management Portal?

- A. Create an AllApps organization.
- **B. Create a VMApps organization.**
- C. Create a new Region.
- D. Enable the Provider Consumption Organization.

Answer: B

Explanation:

A VM Apps organization is the correct construct because it uses the cloud-account and cloud- zone resource model. A vSphere cloud account establishes the connection between VCF Automation and one or more vSphere environments, allowing the organization to discover clusters, storage, networks, and other infrastructure resources. Selected clusters can then be assigned through cloud zones and reserved for that organization's workloads.

This model does not require vSphere Supervisor. Supervisor is principally associated with the All Apps architecture, where regions, zones, namespace classes, and application services provide VM, Kubernetes, storage, networking, and related IaaS capabilities. Creating an All Apps organization would therefore introduce a Supervisor-based resource-consumption model that directly conflicts with the stated requirement.

A Provider Consumption Organization is also unsuitable. It is a special All Apps organization intended for provider-side consumption and for publishing catalog items or orchestrator content to other managed organizations. It is not the construct used to establish dedicated, directly connected vSphere infrastructure for a tenant. A Region is merely a provider-level grouping of infrastructure capacity and does not itself create an organization or enforce exclusive resource allocation.

NEW QUESTION # 86

.....

Our 3V0-21.25 practice materials are high quality and high accuracy rate products. It is all about their superior concreteness and precision that helps. Every page and every points of knowledge have been written from professional experts who are proficient in this line and are being accounting for this line over ten years. Many exam candidates attach great credence to our 3V0-21.25 practice materials. Our 3V0-21.25 practice materials do not need any ads, their quality has propaganda effect themselves.
