

Free PDF 2026 High Hit-Rate Splunk Exam SPLK-3002 Simulations

What's more, part of that DumpTorrent SPLK-3002 dumps now are free: https://drive.google.com/open?id=1K-yV3okpVbEDAWuugUAYhmeFSr_mbo9s

In addition to guarantee that our SPLK-3002 exam pdf provided you with the most updated and valid, we also ensure you get access to our SPLK-3002 dumps collection easily whenever you want. Our test engine mode allows you to practice our SPLK-3002 vce braindumps anywhere and anytime as long as you downloaded our SPLK-3002 study materials. Try free download the trial of our website before you buy.

The SPLK-3002 Exam is designed for IT professionals who are responsible for managing, configuring, and troubleshooting Splunk ITSI. It covers a range of topics, including ITSI architecture, data inputs, data models, service templates, KPIs, alerts, and dashboards. SPLK-3002 exam also tests candidates' knowledge of ITSI deployment, administration, and maintenance best practices. Successful candidates will demonstrate their ability to use Splunk ITSI to monitor and analyze IT services, detect anomalies and issues, and proactively take action to prevent service disruptions.

Prerequisites for the Splunk SPLK-3002 Exam

Splunk IT Service Intelligence Certified Admin (ITI-CA) is the entry level certification for the Splunk IT Service Intelligence learning path. This certification validates a candidate's basic skills to use Splunk software to analyze data, monitor networks, and troubleshoot problems.

The ITI-CA certification is focused on real world skills and knowledge including:

- Data indexing and search in Splunk software
- Gathering and analyzing network data with Splunk software
- Using Splunk software to monitor the availability of network devices
- Splunk Enterprise architecture, installation, configuration, and maintenance

100% Pass Quiz 2026 Splunk SPLK-3002: Reliable Exam Splunk IT Service Intelligence Certified Admin Simulations

With all these features, another plus is the easy availability of DumpTorrent's products. They are instantly downloadable and supported with our online customers service to answer your queries promptly. Your preparation for exam SPLK-3002 with DumpTorrent will surely be worth-remembering experience for you!

Splunk SPLK-3002 certification exam is designed to test the knowledge and skills of individuals who work with Splunk IT Service Intelligence (ITSI). Splunk ITSI is a powerful monitoring and analytics platform that helps organizations gain insights into their IT operations and improve service delivery. By earning the SPLK-3002 Certification, IT professionals can demonstrate their expertise in using Splunk ITSI to solve complex IT problems and optimize service performance.

Splunk IT Service Intelligence Certified Admin Sample Questions (Q59-Q64):

NEW QUESTION # 59

Which of the following accurately describes base searches used for KPIs in a service?

- A. Base searches can be used for multiple services.
- B. A base search can only be used by its service and all dependent services.
- C. All the KPIs in a service use the same base search.
- D. All the metrics in a base search are used by one service.

Answer: A

Explanation:

Explanation

KPI base searches let you share a search definition across multiple KPIs in IT Service Intelligence (ITSI).

Create base searches to consolidate multiple similar KPIs, reduce search load, and improve search performance.

NEW QUESTION # 60

Which deep dive swim lane type does not require writing SPL?

- A. Event lane.
- B. KPI lane.
- C. Metric lane.
- D. Automatic lane.

Answer: B

Explanation:

A KPI lane is a type of deep dive swim lane that does not require writing SPL. You can simply select a service and a KPI from a drop-down list and ITSI will automatically populate the lane with the corresponding data. You can also adjust the threshold settings and time range for the KPI lane. Reference: [KPI Lanes]

NEW QUESTION # 61

When deploying ITSI on a distributed Splunk installation, which component must be installed on the search head(s)?

- A. SA-ITOA
- B. SA-ITSI-Licensechecker
- C. All ITSI components
- D. ITSI app

Answer: B

Explanation:

Explanation

Install SA-ITSI-Licensechecker and SA-UserAccess on any license master in a distributed or search head cluster environment. If a search head in your environment is also a license master, the license master components are installed when you install ITSI on the search heads.

NEW QUESTION # 62

Which of the following items describe ITSI teams? (select all that apply)

- A. Services should be assigned to the 'global' team if all users need access to it.
- B. A new team admin role should be created for each team. The new role should inherit the 'itoe_team_admin' role.
- C. Teams should have itoe admin roles added with read-only permissions for services and entities.
- D. By default, all services are owned by the built-in 'global' team and administered by the 'itoe_admin' role.

Answer: A,B,D

Explanation:

In Splunk IT Service Intelligence (ITSI), teams are used to organize services, KPIs, and other objects within ITSI to facilitate access control and management:

B). Services should be assigned to the 'global' team if all users need access to it: The 'global' team in ITSI is a built-in concept that denotes universal accessibility. Assigning services to the 'global' team makes them accessible to all ITSI users, irrespective of their specific team memberships. This is useful for services that are relevant across the entire organization.

C). By default, all services are owned by the built-in 'global' team and administered by the 'itoad_admin' role: This default setting ensures that upon creation, services are accessible to administrators and can be further re-assigned or refined for access by specific teams as needed.

D). A new team admin role should be created for each team. The new role should inherit the 'itoad_team_admin' role: This best practice allows for granular access control and management within teams.

Each team can have its own administrators with the appropriate level of access and permissions tailored to the needs of that team, derived from the capabilities of the 'itoad_team_admin' role.

The concept of adding 'itoad admin roles' with read-only permissions contradicts the typical use case for administrative roles, which usually require more than read-only access to manage services and entities effectively.

NEW QUESTION # 63

When must a service define entity rules?

- A. To enable entity cohesion anomaly detection.
- **B. If the intention is for the KPIs in the service to filter to only entities assigned to the service.**
- C. If some or all of the KPIs in the service will be split by entity.
- D. If the intention is for the KPIs in the service to have different aggregate vs. entity KPI values.

Answer: B

Explanation:

Provide a value to filter the service to a specific set of entities. These entity rule values are meant to be custom for each service.

Reference:

A is the correct answer because a service must define entity rules if the intention is for the KPIs in the service to filter to only entities assigned to the service. Entity rules are filters that match entities to services based on entity aliases or entity metadata. If you enable the Filter to Entities in Service option for a KPI, you need to define entity rules for the service to ensure that the KPI search results only include the relevant entities for the service. Otherwise, the KPI search results might include entities that are not part of the service or exclude entities that are part of the service. Reference: [Define entities for a service in ITSI], [Configure KPI settings in ITSI]
