JN0-105 Valid Exam Syllabus | Popular JN0-105 Exams

The quality of our JN0-105 exam questions is very high and we can guarantee to you that you will have no difficulty to pass the exam. The content of the questions and answers of JN0-105 study braindumps is refined and focuses on the most important information. To let the clients be familiar with the atmosphere and pace of the real exam we provide the function of stimulating the exam. Our expert team updates the JN0-105 training guide frequently to let the clients practice more. Every detail of our JN0-105 learning prep is perfect.

Juniper JN0-105 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">• Routing Fundamentals: This topic discusses pointing out basic routing concepts or functionality for Junos devices. Moreover, the topic also describes configuring or monitoring basic routing elements for a Junos device.
Topic 2	<ul style="list-style-type: none">• Junos OS Fundamentals: It covers concepts, benefits, and functionality of the core elements of the Junos OS.
Topic 3	<ul style="list-style-type: none">• Routing Policy and Firewall Filters: The topic of Routing Policy and Firewall Filters covers routing policy and firewall filters on Junos devices. Furthermore, the topic also deals with routing policies and firewall filters on a Junos device.

Juniper Junos, Associate (JNCIA-Junos) Sample Questions (Q55-Q60):

NEW QUESTION # 55

Which component is considered part of the data plane?

- A. the power supply
- B. the fan tray
- **C. the Packet Forwarding Engine**
- D. the Routing Engine

Answer: C

Explanation:

The Packet Forwarding Engine (PFE) is an integral component of Juniper Networks devices, responsible for the data plane operations. The data plane, also known as the forwarding plane, is where the actual processing and forwarding of packets occur based on the routing and forwarding tables. The PFE executes the forwarding decisions made by the Routing Engine (RE), handling all packet transmissions, including routing, filtering, and switching packets towards their destination. This contrasts with the control plane operations handled by the RE, which involve routing table maintenance, system management, and control protocol processing.

NEW QUESTION # 56

Which command displays all IPv6 routes in the default routing instance?

- A. showroute table inet.0
- B. showroute table inet.1
- **C. showroute table inet6.0**
- D. showroute table inet6.1

Answer: C

Explanation:

The show route table inet6.0 command displays all IPv6 routes in the default routing instance. In Junos OS, the routing table for IPv6 addresses is referred to as inet6.0, whereas inet.0 is used for IPv4 unicast routes.

The other options do not correspond to the correct IPv6 routing table.

NEW QUESTION # 57

What will the request system configuration rescue save command do?

- A. It saves a configuration version prior to the configuration most recently committed as the rescue configuration.
- B. It activates the rescue configuration.
- C. It saves the candidate configuration as the rescue configuration.
- **D. It saves the most recently committed configuration as the rescue configuration.**

Answer: D

Explanation:

The "request system configuration rescue save" command in Junos OS saves the most recently committed configuration as the rescue configuration, making D the correct answer. This feature allows administrators to set a known good configuration that can be quickly reverted to in case of configuration errors or issues.

NEW QUESTION # 58

Click the Exhibit button.

```
user@router> show route

inet.0: 13 destinations, 14 routes (13 active, 0 holddown, 0
hidden)
+ = Active Route, - = Last Active, * = Both

0.0.0.0/0          *[Static/5] 00:05:38
                   > to 172.29.1.1 via ge-0/0/3.0
```

Referring the exhibit, what does the highlighted number indicate?

- A. cost is 5
- B. hop count is 5
- C. route preference is 5
- D. metric is 5

Answer: C

Explanation:

In the exhibit shown, the highlighted number next to the route type (Static) within the square brackets indicates the route preference, also known as the administrative distance. In Junos, the route preference is a value that determines the priority of the route source. Lower numbers indicate a higher priority when the routing table is being calculated. The route preference is used to select the best route when multiple paths to the same destination exist from different routing sources. The number 5 is unusually low for a static route by default, suggesting it has been manually configured to override other route types.

NEW QUESTION # 59

Which prompt indicates that you are using configuration mode?

- A. #
- B. >
- C. \$
- D. %

Answer: A

Explanation:

In Junos OS, the # prompt indicates that you are in configuration mode. This mode is used for making changes to the configuration of the device.

NEW QUESTION # 60

.....

Choose Icertkey JN0-105 new dumps questions, you will never regret for your decision. Our high-quality JN0-105 exam cram can ensure you 100% pass. You see, we have quality control system, each questions of JN0-105 exam dumps are checked and confirmed strictly according to the quality control system. Besides, the updated frequency for JN0-105 Exam Questions is so regular and in accordance with the real exam changes. You can enjoy one year free update after purchase.
