

# **Analytics-Con-301 New Braindumps Ebook & Analytics-Con-301 Exams Dumps**

P.S. Free & New Analytics-Con-301 dumps are available on Google Drive shared by Exam4Docs: <https://drive.google.com/open?id=1APryys1RglCC2Ph3aUpkEkzt-FAv9um5>

Are you worried about insufficient time to prepare the exam? Do you have a scientific learning plan? Maybe you have set a series of to-do list, but it's hard to put into practice for there are always unexpected changes during the Analytics-Con-301 exam. Here we recommend our Analytics-Con-301 test prep to you. With innovative science and technology, our study materials have grown into a powerful and favorable product that brings great benefits to all customers. We are committed to designing a kind of scientific study material to balance your business and study schedule. With our Analytics-Con-301 Exam Guide, all your learning process includes 20-30 hours. As long as you spare one or two hours a day to study with our latest Analytics-Con-301 quiz prep, we assure that you will have a good command of the relevant knowledge before taking the exam. What you need to do is to follow the Analytics-Con-301 exam guide system at the pace you prefer as well as keep learning step by step.

If you are working all the time, and you hardly find any time to prepare for the Analytics-Con-301 exam, then Exam4Docs present the smart way to Analytics-Con-301 exam prep for the exam. You can always prepare for the Analytics-Con-301 test whenever you find free time with the help of our Analytics-Con-301 Pdf Dumps. We have curated all the Analytics-Con-301 questions and answers that you can view the exam Salesforce Analytics-Con-301 PDF brain dumps and prepare for the exam. We guarantee that you will be able to pass the Analytics-Con-301 in the first attempt.

## **Analytics-Con-301 Exams Dumps & Test Analytics-Con-301 Questions Vce**

Perhaps you have had such an unpleasant experience about what you brought in the internet was not suitable for you in actual use, to avoid this, our company has prepared Analytics-Con-301 free demo in this website for our customers. The content of the free demo is part of the content in our real Analytics-Con-301 Study Guide. Therefore, you can get a comprehensive idea about our real Analytics-Con-301 study materials. And you will find there are three kinds of versions of Analytics-Con-301 learning materials for you to choose from namely, PDF Version Demo, PC Test Engine and Online Test Engine.

### **Salesforce Analytics-Con-301 Exam Syllabus Topics:**

<b>Topic</b>	<b>Details</b>
Topic 1	<ul style="list-style-type: none"><li>• <b>Business Consulting:</b> For Tableau Consultants, this section involves designing and troubleshooting calculations and workbooks to meet advanced analytical use cases. It covers selecting appropriate chart types, applying Tableau's order of operations in calculations, building interactivity into dashboards, and optimizing workbook performance by resolving resource-intensive queries and other design-related issues.</li></ul>
Topic 2	<ul style="list-style-type: none"><li>• <b>Business Analysis:</b> This section of the exam measures skills of Tableau Consultants focusing on evaluating the current state of analytics within an organization. It covers mapping business needs to Tableau capabilities, translating analytical requirements to best practices in Tableau, and recommending appropriate deployment options like Tableau Server or Tableau Cloud. It also includes evaluating existing data structures for supporting business needs and identifying performance risks and opportunities.</li></ul>

Topic 3	<ul style="list-style-type: none"> <li>• <b>Data Management:</b> This part focuses on establishing governance and support for published content. Tableau Consultants are expected to manage data security, publish and maintain data sources and workbooks, and oversee content access. It includes applying governance best practices, using metadata APIs, and supporting administration functions to maintain data integrity and accessibility.</li> </ul>

## Salesforce Certified Tableau Consultant Sample Questions (Q24-Q29):

### NEW QUESTION # 24

A university has data on its undergraduate students and their majors by grade level (Freshman, Sophomore, Junior, Senior). The university is interested in visualizing the path students take as they change majors across grade levels. Which visualization type should the consultant recommend?

- A. Chord Chart
- B. Tree Chart
- C. Radar Chart
- **D. Sankey Diagram**

**Answer: D**

Explanation:

To visualize the path students take as they change majors across different grade levels, a Sankey Diagram is highly effective. This type of visualization illustrates the flow and quantity between different stages or categories:

**Sankey Diagram:** It allows for a visual representation of students' movements between majors over time. Each flow's thickness is proportional to the number of students moving from one major to another, giving a clear, immediate visual cue of major popularity and student migration patterns.

To create a Sankey Diagram in Tableau, you typically need to prepare the data specifically for this type of chart. The data must include source (starting major), target (ending major), and the value (number of students). It often requires custom calculations and data reshaping to get the data in a format that a Sankey can use.

Once the data is prepared, you can use a combination of calculated fields, path binning, and line charts to simulate the flow effect in Tableau. External plugins or web-based integrations might also be employed for more direct implementations.

References

Sankey Diagrams are not natively supported in Tableau but can be implemented through creative use of data preparation and calculations, as suggested in advanced Tableau user communities and demonstrated in various Tableau public galleries.

### NEW QUESTION # 25

A client has a dashboard that renders in less than 10 seconds. The client receives a request to add a new calculated field that will return TRUE if a Project contains any one of the values "Project 1" or "Project 2" and FALSE otherwise. After adding the function found below, the dashboard's render time increases to 14 seconds from 10 seconds.

[Project] = 'Project 1' OR [Project] = 'Project 2'

Which function should the consultant use to reduce the render time?

- A. (([Project] = 'Project 1') OR ([Project] = 'Project 2'))
- B. [Project] IN ('Project 1' OR 'Project 2')
- C. [Project] = 'Project 1' AND [Project] = 'Project 2'
- **D. [Project] IN ('Project 1', 'Project 2')**

**Answer: D**

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Tableau documentation states that IN expressions are optimized internally for better query performance than multiple OR statements. They are pushed efficiently to the data source and simplified during query compilation.

The original expression uses two OR conditions, which increases the complexity of row-level evaluation:

[Project] = 'Project 1' OR [Project] = 'Project 2'

Tableau's performance guidelines recommend replacing multiple OR comparisons with an IN expression whenever possible:

[Project] IN ('Project 1', 'Project 2')

This reduces rendering time by minimizing row evaluation overhead and creating a cleaner, optimized logical condition.

Option D achieves this exactly.

- Option A is logically incorrect because a project cannot simultaneously equal both values.
- Option B is syntactically incorrect because IN expects a list, not an OR inside the list.
- Option C is simply a reformatting of the original OR expression and provides no performance improvement.
- Option D is the only valid, optimized solution.
- \* Tableau calculation optimization guidance recommending IN over OR for performance.
- \* Tableau's query performance notes indicating that OR statements expand logical branches and slow down evaluation.
- \* Best practices for row-level calculations suggesting simplified logical expressions.

### NEW QUESTION # 26

From the desktop, open the CC workbook.  
 Open the Incremental worksheet.  
 You need to add a line to the chart that shows the cumulative percentage of sales contributed by each product to the incremental sales.  
 From the File menu in Tableau Desktop, click Save.

#### Answer:

Explanation:

See the complete Steps below in Explanation:

Explanation:

To add a line showing the cumulative percentage of sales contributed by each product to the incremental sales in the Incremental worksheet of your Tableau Desktop, follow these detailed steps:

- \* Open the CC Workbook and Access the Worksheet:
- \* From the desktop, double-click on the CC workbook to open it in Tableau Desktop.
- \* Navigate to the Incremental worksheet by clicking on its tab at the bottom of the window.
- \* Calculate Cumulative Sales Percentage:
- \* Create a new calculated field to compute the cumulative percentage of sales. Right-click in the Data pane and select 'Create Calculated Field'.
- \* Name this field "Cumulative Sales Percentage".
- \* Enter the following formula to calculate the running sum of sales as a percentage of the total sales:  
 $(\text{RUNNING\_SUM}(\text{SUM}([\text{Sales}])) / \text{TOTAL}(\text{SUM}([\text{Sales}])) [\text{Sales}])$
- \* Click 'OK' to save the calculated field.
- \* Add the Cumulative Sales Percentage Line to the Chart:
- \* Drag the "Cumulative Sales Percentage" field to the Rows shelf, placing it next to the existing Sales measure.
- \* Ensure that the cumulative line appears as a continuous line. Right-click on the "Cumulative Sales Percentage" field on the Rows shelf, select 'Change Chart Type', and choose 'Line'.
- \* Adjust the axis to synchronize or dual-axis if necessary. Right-click on the axis of the "Cumulative Sales Percentage" and select 'Synchronize Axis' if it's on a dual-axis setup.
- \* Format the Cumulative Sales Percentage Line:
- \* Click on the "Cumulative Sales Percentage" line in the visualization.
- \* Navigate to the 'Format' pane to adjust the line style, thickness, and color to make it distinct from other data in the chart.
- \* Save Your Changes:
- \* From the File menu, click 'Save' to ensure all your changes are stored.

References:

Tableau Help: Provides additional details on creating calculated fields and customizing line charts.

Tableau User Guide: Offers extensive instructions on formatting charts, including line types and axis synchronization.

By following these steps, you will successfully add a cumulative sales percentage line to your chart, enhancing the visualization to reflect the incremental contribution of each product to the overall sales in a dynamic and informative manner.

### NEW QUESTION # 27

An online sales company has a table data source that contains Order Date. Products ship on the first day of each month for all orders from the previous month.

The consultant needs to know the average number of days that a customer must wait before a product is shipped.

Which calculation should the consultant use?

- A. Calc1: DATETRUNC ('month', DATEADD('month', 1, [Order Date]))  
Calc2: AVG(DATEDIFF ('week', [Order Date], [Calc1]))
- B. Calc1: DATETRUNC ('day', DATEADD ('day', 31, [Order Date]))  
Calc2: AVG ([Order Date] - [Calc1])
- C. Calc1: DATETRUNC ('month', DATEADD ('month', 1, [Order Date]))  
Calc2: AVG(DATEDIFF ('day', [Order Date], [Calc1]))
- D. Calc1: DATETRUNC ('day', DATEADD('week', 4, [Order Date]))  
Calc2: AVG([Order Date] - [Calc1])

**Answer: C**

Explanation:

The correct calculation to determine the average number of days a customer must wait before a product is shipped is to first find the shipping date, which is the first day of the following month after the order date. This is done using DATETRUNC('month', DATEADD('month', 1, [Order Date])). Then, the average difference in days between the order date and the shipping date is calculated using AVG(DATEDIFF('day', [Order Date], [Calc1])). This approach ensures that the average wait time is calculated in days, which is the most precise measure for this scenario.

References: The solution is based on Tableau's date functions and their use in calculating differences between dates, which are well-documented in Tableau's official learning resources and consultant documents<sup>12</sup>.

To calculate the average waiting days from order placement to shipping, where shipping occurs on the first day of the following month:

Calculate Shipping Date (Calc1): Use the DATEADD function to add one month to the order date, then apply DATETRUNC to truncate this date to the first day of that month. This represents the shipping date for each order.

Calculate Average Wait Time (Calc2): Use DATEDIFF to calculate the difference in days between the original order date and the calculated shipping date (Calc1). Then, use AVG to average these differences across all orders, giving the average number of days customers wait before their products are shipped.

References:

Date Functions in Tableau: Functions like DATEADD, DATETRUNC, and DATEDIFF are used to manipulate and calculate differences between dates, crucial for creating metrics that depend on time intervals, such as customer wait times in this scenario.

### NEW QUESTION # 28

A client wants to migrate their Tableau Server to Tableau Cloud. The Tableau Server is configured with three sites: Finance, Strategy, and Marketing. A consultant must provide a solution that minimizes user impact and costs.

Which configuration should the consultant recommend for Tableau Cloud to meet the client's requirements?

- A. One Tableau Cloud instance configured with a Finance project folder, Strategy project folder, and Marketing project folder
- B. One Tableau Cloud instance with two sites for Strategy and Marketing, and one Tableau Server instance for Finance
- C. One Tableau Cloud instance configured with all workbooks in a single project
- D. Three separate Tableau Cloud instances for Finance, Strategy, and Marketing

**Answer: A**

Explanation:

To minimize user impact and costs while migrating from Tableau Server to Tableau Cloud with multiple sites, the best solution is: Single Tableau Cloud Instance with Multiple Projects: Instead of multiple sites which could imply higher management overhead and possibly higher costs, configuring one Tableau Cloud instance with different project folders for each former site (Finance, Strategy, Marketing) is most efficient.

Benefits: This setup maintains organizational separation of data and access similar to having different sites but leverages the unified management and simplicity of a single cloud instance. It reduces complexity in user access management and integration points.

Implementation: Each project folder acts like a mini-site within the larger instance, where specific permissions and content can be managed independently, akin to the original server setup but within a single cloud-based environment.

References

This recommendation is in line with best practices for cloud migration focusing on consolidation and cost efficiency, as suggested in Tableau's official documentation for cloud migration strategies.

### NEW QUESTION # 29

.....

It is known to us that our Analytics-Con-301 study materials are enjoying a good reputation all over the world. Our study materials have been approved by thousands of candidates. You may have some doubts about our product or you may suspect the pass rate of it, but we will tell you clearly, it is totally unnecessary. If you still do not trust us, you can choose to download demo of our Analytics-Con-301 Test Torrent. Now I will introduce you our Analytics-Con-301 exam tool in detail, I hope you will like our Analytics-Con-301 exam questions.
