## Free PDF 2026 Salesforce Reliable AP-202 Test Labs

GetValidTest guarantee the most valid and high quality AP-202 study guide which you won't find any better one available. Our AP-202 training pdf will be the right study reference if you want to be 100% sure pass and get satisfying results. From our free demo which allows you free download, you can see the validity of the questions and format of the AP-202 Actual Test. In addition, the price of our AP-202 examination material is reasonable and affordable for all of you. Just come and buy our AP-202 training questions!

## Salesforce B2B Commerce for Developers Accredited Professional Sample Questions (Q108-Q113):

### NEW QUESTION # 108

A developer suspects recent edits to a checkout flow have created a bug based on flow errors being emailed. Given the emails and some inputs known to trigger the issue, which two activities should the developer consider in their investigation?

- A. Open the Flow, Select Debug, Provide the Inputs, Select Run
- B. Look at the previous flow versions and compare them with the current one
- C. Open the Flow and select Attach to Live Session, Provide the Session Id, Select Attach
- D. Use the Org Browser tool in the IDE to download the flow XML and run a diff report

**Answer: A,B**

Explanation:

To investigate a suspected bug in a checkout flow, comparing previous versions of the flow with the current one can help identify changes that might have introduced the bug. Additionally, Salesforce provides debugging capabilities within the Flow Builder, where a developer can select the debug option, provide input values known to trigger the issue, and execute the flow to observe its behavior, aiding in pinpointing the source of the problem.

#### NEW QUESTION # 109

What is a valid way of referencing the global `cc_api_CartExtension` apex class via subscriber code?

- A. `ccrz.cc_api_CartExtension`
- B. `c__cc_api_CartExtension`
- C. `ccrz__cc_api_CartExtension`
- D. `cloudcraze.cc_api_CartExtension`

**Answer: A**

Explanation:

A valid way of referencing the global `cc_api_CartExtension` apex class via subscriber code is to use `ccrz.cc_api_CartExtension`. This is the name of the class that is defined in the cloudcraze managed package. The class is global, so it can be accessed by subscriber code. The other options are either invalid or incorrect. Salesforce B2B Commerce and D2C Commerce Developer Guide, API Classes

#### NEW QUESTION # 110

What is the recommended method for increasing the number of required autocomplete characters that are typed before autocomplete works?

- A. Override the autocomplete template and create and register a new handlebars helper.
- B. **Override the `autoComplete.search_input.minLength` value in the `CCRZ.uiProperties` file**
- C. Update the `...minLength` property in CC Admin, then build and activate a new cache.
- D. Override and extend the `autoComplete` method in `cc_hk_Catalog`.

**Answer: B**

Explanation:

The recommended method for increasing the number of required autocomplete characters that are typed before autocomplete works is to override the `autoComplete.search_input.minLength` value in the `CCRZ.uiProperties` file. This file contains various properties that control the behavior and appearance of the user interface components. The `autoComplete.search_input.minLength` property specifies the minimum number of characters that must be entered before the autocomplete feature is triggered. The default value is 3, but it can be changed to any desired value by overriding it in the `CCRZ.uiProperties` file. Salesforce B2B Commerce and D2C Commerce Developer Guide, UI Properties

#### NEW QUESTION # 111

Which orders can a user view on Order List Component (Aura) for B2B stores?

- A. Orders placed in any storefront and related to the current user's account
- B. Orders placed in any storefront and related to the current effective account
- C. **Orders placed in the current storefront and related to the current effective account**
- D. Orders placed in the current storefront and related to the current user's account

**Answer: C**

Explanation:

According to the B2B Commerce Developer Guide, the Order List Component (Aura) for B2B stores displays a list of orders that the user can view and reorder. The component filters the orders based on the current storefront and the current effective account. The current effective account is the account that the user is currently acting on behalf of, which can be different from the user's own account. The component does not show orders placed in other storefronts or related to other accounts, even if the user has access to them. Therefore, the correct answer is A. Orders placed in the current storefront and related to the current effective account. The other options are incorrect because they do not match the criteria of the component. B2B Commerce Developer Guide, Show the Order List Widget

### NEW QUESTION # 112

A developer is working on a storefront and is seeing unexpected UI behavior in one of the custom Lightning web components (LWCs) their team has built.

How should the developer investigate the issue?

- A. Enable Debug Mode for a storefront user, log in to the storefront, and use Browser Inspection tools and debugger points.
- B. Enable Debug Mode for a storefront user, load the LWC in Visual Studio (VS) Code, attach to session, and view debug logs in VS Code.
- C. Enable debug logs for a storefront user, log in to storefront and perform action, and view debug logs in Setup.
- D. Identify the user, inputs, and failure, then ask Salesforce support to investigate the issue with the custom LWC.

**Answer: A**

Explanation:

To investigate the issue of seeing unexpected UI behavior in one of the custom Lightning web components (LWCs) their team has built, the developer should enable Debug Mode for a storefront user, log in to the storefront, and use Browser Inspection tools and debugger points. Debug Mode is a feature that allows developers to debug and troubleshoot custom LWCs in the storefront by disabling performance optimizations and enabling source maps. Source maps are files that map the minified or obfuscated code to the original source code, making it easier to read and debug. To enable Debug Mode for a storefront user, the developer can go to Setup, enter Users in the Quick Find box, select Users, click Edit next to the user name, and select Debug Mode. After enabling Debug Mode, the developer can log in to the storefront as the user and use Browser Inspection tools and debugger points to inspect and debug the custom LWC. Browser Inspection tools are tools that are built into web browsers that allow developers to examine and modify the HTML, CSS, JavaScript, and other aspects of a web page. Debugger points are statements that are added to the JavaScript code of a LWC that pause the execution of the code at a certain point and allow the developer to inspect the values of variables, expressions, and other elements. Enable Debug Mode for a storefront user, load the LWC in Visual Studio (VS) Code, attach to session, and view debug logs in VS Code is not a valid way to investigate the issue of seeing unexpected UI behavior in one of the custom LWCs their team has built, as it is not possible to attach to a session or view debug logs for LWCs in VS Code. Enable debug logs for a storefront user, log in to storefront and perform action, and view debug logs in Setup is not a valid way either, as debug logs do not capture information about LWCs or UI behavior. Debug logs are records of database operations, system processes, and errors that occur when executing a transaction or running unit tests. Identify the user, inputs, and failure, then ask Salesforce support to investigate the issue with the custom LWC is not a valid way either, as it is not a recommended or efficient way of debugging or troubleshooting custom LWCs. Salesforce support may not be able to provide assistance or guidance for custom LWCs that are developed by third-party developers. Salesforce B2B Commerce Developer Guide: Debug Lightning Web Components, Lightning Web Components Developer Guide: Debug Your Code, Salesforce Help: Debug Logs

### NEW QUESTION # 113

.....

When looking for a job, of course, a lot of companies what the personnel managers will ask applicants that have you get the AP-202 certification to prove their abilities, therefore, we need to use other ways to testify our knowledge we get when we study at college , such as get the AP-202 Test Prep to obtained the qualification certificate to show their own all aspects of the comprehensive abilities, and the AP-202 exam guide can help you in a very short period of time to prove yourself perfectly and efficiently.
