P.S. Free 2025 Fortinet FCP\_ZCS-AD-7.4 dumps are available on Google Drive shared by TorrentVCE:  
[https://drive.google.com/open?id=10o6di8sb1WkqZeitk2eHpZb9UK\\_6gsk6](https://drive.google.com/open?id=10o6di8sb1WkqZeitk2eHpZb9UK_6gsk6)

There are various individuals who have never shown up for the FCP - Azure Cloud Security 7.4 Administrator certification test as of now. They know close to nothing about the FCP - Azure Cloud Security 7.4 Administrator exam model and how to attempt the requests. Fortinet FCP\_ZCS-AD-7.4 Dumps give an unequivocal thought of the last preliminary of the year model and how a promising rookie ought to attempt the solicitation paper to score well.

Once we have bought a practice materials, we may worry about that the version we bought cannot meet the need for the exam, so that we cannot know the latest information for the exam, if you worry about the questions like this and intend to join the FCP\_ZCS-AD-7.4 exam, just select the product of our company, because our products offer 365 days free update, it can help you to know about the latest information of the FCP\_ZCS-AD-7.4 Exam, so that you can change your strategies for the exam, besides downloading link of the update version will be sent to your email automatically by our systems. Using this, you can prepare for your test with ease.

## 100% Pass FCP\_ZCS-AD-7.4 Marvelous Instant FCP - Azure Cloud Security 7.4 Administrator Discount

If you want to pass your FCP\_ZCS-AD-7.4 exam and get the FCP\_ZCS-AD-7.4 certification which is crucial for you successfully, I highly recommend that you should choose the FCP\_ZCS-AD-7.4 certification preparation materials from our company so that you can get a good understanding of the FCP\_ZCS-AD-7.4 Exam that you are going to prepare for. We believe that if you decide to buy the FCP\_ZCS-AD-7.4 exam materials from our company, you will pass your exam and get the FCP\_ZCS-AD-7.4 certification in a more relaxed way than other people.

## Fortinet FCP - Azure Cloud Security 7.4 Administrator Sample Questions (Q10-Q15):

### NEW QUESTION # 10

How are the configurations synchronized between two FortiGate VMs in an active-passive HA with SDN connector failover deployed from the Azure marketplace?

- A. By configuring FGSP on the primary
- B. Using system autoscaling during a failover
- C. Using unicast FGCP
- D. An Azure function distributes the configuration files

Answer: C

Explanation:

In an active-passive HA deployment of FortiGate VMs in Azure using the Marketplace template, configuration synchronization is handled via unicast FortiGate Clustering Protocol (FGCP). FGCP allows the primary unit to replicate its configuration and session information to the secondary unit, ensuring seamless failover.

#### NEW QUESTION # 11

Refer to the exhibits.

#### SDN debug output

```
azr: sdn connector settings LABSDN updated
azr: update sdn connector LABSDN status to enabled
azr: sdn connector settings LABSDN updated
azd sdn connector LABSDN prepare to update
azd sdn connector LABSDN getting token
token size: 1306
token expire in: 3600 seconds
azd sdn connector LABSDN start updating
azd sdn connector LABSDN start updater process 2832
azd sdn connector LABSDN found 3 NICs from Azure
azd sdn connector LABSDN get page 1 of vm list
azd vm list page size: 2
azd sdn connector LABSDN found 2 VMs from Azure
azd sdn connector LABSDN start updating IP addresses
azd checking firewall address object UbuntuServer, vd 0
address UbuntuServer num change 0/1, new ip list:
172.16.2.4
azd checking firewall address object webServer, vd 0
azd sdn connector LABSDN finish updating IP addresses
azd reap child pid: 2832
```

### Dynamic firewall address status

|               |                              |
|---------------|------------------------------|
| Address       | webServer                    |
| Type          | Dynamic                      |
| Sub Type      | Fabric Connector Address     |
| SDN Connector | LABSDN                       |
| Filter        | category=windows             |
| Interface     | <input type="checkbox"/> any |
| References    | 0                            |

### Dynamic firewall address status

|               |                              |
|---------------|------------------------------|
| Address       | UbuntuServer                 |
| Type          | Dynamic                      |
| Sub Type      | Fabric Connector Address     |
| SDN Connector | LABSDN                       |
| Filter        | tag.category=server          |
| Interface     | <input type="checkbox"/> any |
| References    | 0                            |

View Matched Addresses

Two new dynamic firewall addresses have been configured on the FortiGate VM using the external connector to Integrate within the same Azure environment.

The debug output shows that one IP address can be resolved successfully, but the second is empty.

Which steps could you perform to correct the misconfiguration? (Choose all that apply.)

- A. Check for a mistyped Microsoft Entra ID subscription
- B. Verify the NSG for the target VM
- C. Verify the Microsoft Entra ID role assignment access rights
- **D. Verify the tags on the target VM**
- **E. Verify the filter used for the dynamic firewall address**

**Answer: D,E**

Explanation:

The debug output shows that the UbuntuServer address object successfully resolved an IP, while the webServer did not. The most likely cause is a mismatch in the dynamic address filter or missing tags on the target VM.

Verify the filter used for the dynamic firewall address - The filter category=windows may not match any VM metadata, resulting in no matched addresses.

Verify the tags on the target VM - Ensure that the VM has the correct tags (e.g., category=windows) that match the dynamic address filter to enable resolution.

### NEW QUESTION # 12

Refer to the exhibit.

The exhibit shows some of the properties of a virtual NIC that is used by a FortiGate VM deployed in Azure.

The virtual NIC shown is connected to a subnet (10.0.1.0/26) with several VMs that will be accessing the internet through the FortiGate VM.

Which statement is true for this scenario?

- A. The NIC in the exhibit needs to be assigned a public IP address.
- B. The VMs in the 10.0.1.0/26 subnet can access the internet through FortiGate.
- C. The parameters of the virtual NIC are not configured correctly.
- **D. You must change the default gateway on the VMs in the Internal Subnet for this to work.**

**Answer: D**

Explanation:

For VMs in the 10.0.1.0/26 subnet to access the internet through the FortiGate VM, their default gateway must be changed to the internal IP address of the FortiGate's NIC in that subnet (e.g., LAB1-FGT-A-Nic2).

This ensures traffic is routed through FortiGate for inspection and NAT, rather than directly using Azure's default system routes.

### NEW QUESTION # 13

Which statement about deploying VMs in a gateway subnet is true?

- A. VMs are automatically deployed in a gateway subnet
- B. VMs are required in a gateway subnet
- **C. VMs are not allowed in a gateway subnet**
- D. VMs can be deployed in a gateway subnet only after you deploy the VPN Gateway

**Answer: C**

Explanation:

Azure does not allow the deployment of virtual machines (VMs) in a gateway subnet. The gateway subnet is specifically reserved for Azure VPN Gateway or ExpressRoute Gateway instances, and deploying other resources in it can cause gateway deployment or operation failures.

#### NEW QUESTION # 14

In Microsoft Entra ID, what is the primary administrative unit that represents an organization and its relationship with Microsoft's cloud services?

- A. Microsoft Entra subscription
- B. Microsoft Entra organization
- C. Microsoft Entra domain
- **D. Microsoft Entra tenant**

**Answer: D**

Explanation:

A Microsoft Entra tenant is the primary administrative unit that represents an organization within Microsoft's identity platform. It defines the boundary for identity management, access control, and resource governance, and serves as the core entity that connects the organization to Microsoft's cloud services such as Azure and Microsoft 365.

#### NEW QUESTION # 15
