

Updates To Exam4PDF Mule-101 Dumps Every 1 year

It is known to us that getting the Mule-101 certification has become more and more popular for a lot of people in different area, including students, teachers, and housewife and so on. Everyone is desired to have the Mule-101 certification. Our Mule-101 Exam Dumps Question is very necessary for you to try your best to get the certification in a short time. Mule-101 Exam Braindumps is willing to give you a hand to pass the exam. Mule-101 Exam Torrent will be the best study tool for you to get the certification

Salesforce Mule-101 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none">Recognize and interpret essential integration concepts and terminology: This domain focuses on foundational concepts including cloud service models, infrastructure types, networking protocols, data formats, security principles, and API classifications.
Topic 2	<ul style="list-style-type: none">Describe the components and benefits of Anypoint Platform for system integration: This domain covers Anypoint Platform's integration components, connectors, runtime control planes, deployment options, and reusable Exchange assets.
Topic 3	<ul style="list-style-type: none">Explain the common technical complexities and patterns in integration development: This domain explores interaction patterns, composition patterns, API specifications, observability approaches, and deployment application architecture comparisons.
Topic 4	<ul style="list-style-type: none">Describe the components and benefits of Anypoint Platform for API management: This domain focuses on Anypoint Platform's API management features, lifecycle development, and advantages of API-led connectivity.
Topic 5	<ul style="list-style-type: none">Identify the roles, responsibilities, and lifecycle of a integration project: This domain covers integration project lifecycles, common failure points, MuleSoft's API-led delivery model, DevOps practices, and team roles within integration projects.

Reliable Mule-101 Actual Test Dumps PDF has 100% pass rate - Exam4PDF

Our system is high effective and competent. After the clients pay successfully for the Mule-101 study materials the system will send the products to the clients by the mails. The clients click on the links in the mails and then they can use the Mule-101 study materials immediately. Our system provides safe purchase procedures to the clients and we guarantee the system won't bring the virus to the clients' computers and the successful payment for our Mule-101 Study Materials. Our system is strictly protect the clients' privacy and sets strict interception procedures to forestall the disclosure of the clients' private important information. Our system will automatically send the updates of the Mule-101 study materials to the clients as soon as the updates are available. So our system is wonderful.

Salesforce Certified MuleSoft Integration Foundations Sample Questions (Q34-Q39):

NEW QUESTION # 34

Which Exchange asset type represents configuration modules that extend the functionality of an API and enforce capabilities such as security?

- **A. Policies**
- B. Connectors
- C. REST APIS
- D. Rulesets

Answer: A

Explanation:

Policies: In Anypoint Platform, a Policy is a configuration module that intercepts requests and responses to enforce specific behaviors, such as security (OAuth, Basic Auth), traffic control (Rate Limiting), or compliance.

Exchange Asset: Policies (both out-of-the-box and custom policies built in XML) are stored as assets in Anypoint Exchange.

Why others are incorrect:

Rulesets: Usually refer to API governance rules (linting RAML).

Connectors: Used to connect to external systems (Salesforce, DB), not to enforce security on the API itself.

NEW QUESTION # 35

Which key DevOps practice and associated Anypoint Platform component should a MuleSoft Integration team adopt to improve delivery quality?

- A. Continuous design with API Designer
- B. Passive monitoring with Anypoint Monitoring
- **C. Automated testing with MUnit**
- D. Manual testing with Anypoint Studio

Answer: C

Explanation:

DevOps & Quality: A core tenet of DevOps is CI/CD (Continuous Integration/Continuous Delivery). To achieve high quality in a fast-paced CI/CD pipeline, testing must be automated, not manual.

MUnit: This is the native testing framework for Mule applications. It allows developers to write unit and integration tests that run automatically during the build process (e.g., via Maven).
Why others are incorrect:
Manual testing (B): Is slow, error-prone, and not a "DevOps" scaling practice.
Passive monitoring (A): happens after deployment (Operations), whereas MUnit ensures quality during development/build.

NEW QUESTION # 36

An organization is not meeting its growth and innovation objectives because IT cannot deliver projects fast enough to keep up with the pace of change required by the business.

- A. Switch from a design-first to a code-first approach for IT development
- B. Modify IT governance and security controls so that line of business developers can have direct access to the organization's systems of record
- **C. Adopt a new approach that decouples core IT projects from the innovation that happens within each line of business**
- D. Hire more IT developers, architects, and project managers to increase IT delivery

Answer: C

Explanation:

The IT Delivery Gap: This question addresses the "IT Delivery Gap"-the widening gap between business demands and IT's capacity to deliver.

The Solution (New Operating Model): MuleSoft recommends shifting from a centralized factory model to an Asset-Based consumption model.

Decoupling (Option A): By using API-led Connectivity:

Central IT builds reusable System APIs (unlocking core assets/systems of record) and governs them.

Lines of Business (LOB) consume these assets to build their own Process and Experience APIs (Innovation)2.

Why others fail:

(B) Hiring doesn't scale linearly with exponential demand.

(C) Removing governance creates security risks ("Shadow IT").

(D) Code-first ignores reuse and leads to technical debt.

NEW QUESTION # 37

According to the National Institute of Standards and Technology (NIST), which cloud computing deployment model describes a composition of two or more distinct clouds that support data and application portability?

- A. Community cloud
- **B. Hybrid cloud**
- C. Private cloud
- D. Public cloud

Answer: B

Explanation:

NIST Definition: The NIST definition of Hybrid Cloud is explicitly "a composition of two or more distinct cloud infrastructures (private, community, or public) that remain unique entities, but are bound together by standardized or proprietary technology that enables data and application portability." 1 MuleSoft Context: This is highly relevant to MuleSoft's Runtime Plane options. A customer might run some apps in CloudHub (Public Cloud) and others on Runtime Fabric (Private Data Center), creating a Hybrid deployment to ensure data portability and local processing where needed.

Why others are incorrect:

Public Cloud: Open for open use by the general public (e.g., AWS, Azure).

Private Cloud: Exclusive use by a single organization.

Community Cloud: Exclusive use by a specific community of consumers from organizations that have shared concerns.

NEW QUESTION # 38

Which component of Anypoint Platform belongs to the platform control plane?

- A. Runtime Replica
- B. Runtime Fabric
- **C. API Manager**
- D. Anypoint Connectors

Answer: C

Explanation:

Control Plane vs. Runtime Plane:

Control Plane: The set of components that manage, monitor, and design APIs and applications. This includes API Manager, Runtime Manager (the console), Anypoint Exchange, and Design Center3.

Runtime Plane: The infrastructure where the applications actually run (execute). This includes the Mule Runtime engine, Runtime Fabric, and CloudHub workers.

API Manager: It sits in the Control Plane and pushes policies (governance) down to the runtime engines (gateways).

NEW QUESTION # 39
