

# NCM-MCI Valid Test Book & Latest NCM-MCI Exam Questions

## NCM-MCI Questions and Answers Set

**01. An administrator is configuring software only. Data-at-Rest Encryption on their Nutanix cluster. They are planning to deploy a third-party key management server (KMS). Where should this server be hosted?**

- a) As a single VM on the Nutanix cluster
- b) On hardware external to the Nutanix cluster
- c) As a clustered VM setup on the Nutanix cluster
- d) As a single VM deployed on the host that contains the Prism leader CVM

**Answer: b**

**02. An organization is running a Nutanix Cluster based on AOS 5.10.x and VMware vSphere 6.7. Currently, the CVM network is segmented and Storage only nodes not present. A new security project based on NSX is coming. VMware Distributed Virtual Switches are required. The administrator needs to prepare the environment for the new project.**

**Which step should the administrator use to initiate the project?**

- a) Convert storage only nodes into vSphere nodes
- b) Enable Jumbo Frames to accommodate network frames
- c) Enable Nutanix Flow at the Prism Central Level
- d) Manually disable CVM network Segmentation

**Answer: b**

**03. An administrator needs to forecast infrastructure requirements for a new program and its associated applications. Prior to the projected start of the new program, all existing applications will be decommissioned. How should the administrator perform this task?**

- a) Check the Disregard Existing Workloads radio button in the Runway scenario.
- b) Check the Disregard Existing Nodes radio button in the Runway scenario.
- c) Add up the recovered workloads and manually remove from the Runway configuration.
- d) Power down the workloads during a maintenance window and run the Capacity Runway.

**Answer: a**

P.S. Free & New NCM-MCI dumps are available on Google Drive shared by TestkingPass: [https://drive.google.com/open?id=1icjsrXKlayuQt3dOyTC\\_FJjwRYBuTQyS](https://drive.google.com/open?id=1icjsrXKlayuQt3dOyTC_FJjwRYBuTQyS)

Successful people are never satisfying their current achievements. So they never stop challenging themselves. If you refuse to be an ordinary person, come to learn our NCM-MCI preparation questions. Our NCM-MCI study materials will broaden your horizons and knowledge. Many people have benefited from learning our NCM-MCI learning braindumps. Most of them have realized their dreams and became successful.

## Why You Should Get Nutanix NCM-MCI Exam

Getting certified is one way of expanding your knowledge and skills. A number of people are becoming aware of the importance of getting certified; hence, the ever-increasing demand for certification exams. The Nutanix NCM-MCI exam is one of the most sought after certifications today. If you are planning to get certified, then this article will be very useful to you. **Nutanix NCM-MCI exam dumps** will be an amazing resource for you.

- You can get higher salary

In a survey conducted by Career Builder, it was found out that about 50 percent of employers consider applicants who have obtained certification to be more qualified for the job than those who do not. So if you get certified, you can expect a higher pay than other applicants.

- You can become more qualified in your field

Getting certified means that you are knowledgeable enough in your chosen career or area of expertise. You can also learn new skills

and gain additional knowledge that will prove to be very helpful for your career in the future.

## Latest NCM-MCI Exam Questions, NCM-MCI Associate Level Exam

In fact, a number of qualifying exams and qualifications will improve your confidence and sense of accomplishment to some extent, so our NCM-MCI test practice question can be your new target. When we get into the job, our NCM-MCI training materials may bring you a bright career prospect. Companies need employees who can create more value for the company, but your ability to work directly proves your value. Our NCM-MCI Certification guide can help you improve your ability to work in the shortest amount of time, thereby surpassing other colleagues in your company, for more promotion opportunities and space for development. Believe it or not that up to you, our NCM-MCI training materials are powerful and useful, it can solve all your stress and difficulties in reviewing the NCM-MCI exams.

### Nutanix Certified Master - Multicloud Infrastructure v6.10 Sample Questions (Q12-Q17):

#### NEW QUESTION # 12

##### Task 3

An administrator needs to assess performance gains provided by AHV Turbo at the guest level. To perform the test the administrator created a Windows 10 VM named Turbo with the following configuration.

1 vCPU

8 GB RAM

SATA Controller

40 GB vDisk

The stress test application is multi-threaded capable, but the performance is not as expected with AHV Turbo enabled. Configure the VM to better leverage AHV Turbo.

Note: Do not power on the VM. Configure or prepare the VM for configuration as best you can without powering it on.

#### Answer:

Explanation:

See the Explanation for step by step solution

Explanation:

To configure the VM to better leverage AHV Turbo, you can follow these steps:

Log in to Prism Element of cluster A using the credentials provided.

Go to VM > Table and select the VM named Turbo.

Click on Update and go to Hardware tab.

Increase the number of vCPUs to match the number of multiqueues that you want to enable. For example, if you want to enable 8 multiqueues, set the vCPUs to 8. This will improve the performance of multi-threaded workloads by allowing them to use multiple processors.

Change the SCSI Controller type from SATA to VirtIO. This will enable the use of VirtIO drivers, which are required for AHV Turbo.

Click Save to apply the changes.

Power off the VM if it is running and mount the Nutanix VirtIO ISO image as a CD-ROM device. You can download the ISO image from Nutanix Portal.

Power on the VM and install the latest Nutanix VirtIO drivers for Windows 10. You can follow the instructions from Nutanix Support Portal.

After installing the drivers, power off the VM and unmount the Nutanix VirtIO ISO image.

Power on the VM and log in to Windows 10.

Open a command prompt as administrator and run the following command to enable multiqueue for the VirtIO NIC:

```
ethtool -L eth0 combined 8
```

Replace eth0 with the name of your network interface and 8 with the number of multiqueues that you want to enable. You can use `ipconfig /all` to find out your network interface name.

Restart the VM for the changes to take effect.

You have now configured the VM to better leverage AHV Turbo. You can run your stress test application again and observe the performance gains.

<https://portal.nutanix.com/page/documents/kbs/details?targetId=kA00e000000LKPdCAO> change vCPU to 2/4 ?

Change SATA Controller to SCSI:

acli vm.get Turbo

Output Example:

```
Turbo {
  config {
    agent_vm: False
    allow_live_migrate: True
    boot {
      boot_device_order: "kCdrom"
      boot_device_order: "kDisk"
      boot_device_order: "kNetwork"
      uefi_boot: False
    }
    cpu_passthrough: False
    disable_branding: False

**Task 1**

Instructions    Notes    Feedback     Flag for review?

Perform the following task(s).

A newly created Windows VM "SQL02" is experiencing poor storage performance when compared to "SQL01" running within the same cluster, on the same storage container.

The cluster is in a healthy state.

Create a new session named Monitor SQL02 with meaningful metrics. Right click on the session page and click Select All then paste this into Notepad and save it as Task 1.txt on the desktop.

Also, save the analysis as a report named "MonitorSQL02" and send the report as a PDF on a daily basis to perf\_group@ACME.org. Reports should not be retained. If any new objects need to be created, use monitorvm2 in the name.

**Environment Info**

- nutanix / GNP\*FE2504XGIZ
- root / KR\*6HY00z5E8

**Prism Central Web Console**

- admin / ykZU3CHERTV\*
- nutanix / UJ2x81DEXGY

**Cluster 1**

CVM external IP : 34.53.118.63  
CVM DR IP: 172.30.0.6

- admin / 9Fw0813QW4X3
- nutanix / GNP\*FE2504XGIZ
- root / KR\*6HY00z5E8

**Cluster 2**

CVM external IP : 34.82.155.5  
CVM DR IP: 172.30.0.4

- admin / 5\*K30fA76X
- nutanix / N\*3FwM1E7ZT9

**Task1**

A newly created Windows VM "SQL02" is experiencing poor storage performance when compared to "SQL01" running within the same cluster, on the same storage container.

The cluster is in a healthy state.

Create a new session named Monitor SQL02 with meaningful metrics. Right click on the session page and click Select All then paste this into Notepad and save it as Task 1.txt on the desktop.

Also, save the analysis as a report named "MonitorSQL02" and send the report as a PDF on a daily basis to perf\_group@ACME.org. Reports should not be retained. If any new objects need to be created, use monitorvm2 in the name.

Finally, correct the issue within "SQL02"

**Notes:**

- Do not power on the VMs.
- While you will be creating a session, you will need to examine the VM configurations to determine the issue.
- Do not delete the VM to resolve the issue, any other destructive change is acceptable

**Answer:**

**Explanation:**

See the Explanation

**Explanation:**

This is a classic Nutanix performance troubleshooting scenario. The issue is almost certainly that the VM was created using the wrong Disk Bus Type (IDE or SATA instead of SCSI).

Here is the step-by-step solution to complete Task 1.

**Part 1: Analysis and Reporting**

**Create the Session**

Log in to Prism Central (or Prism Element, depending on the exam environment, but Analysis is usually a PC feature).

Navigate to Operations -> Analysis.

Click New Session.

Name: Monitor SQL02

Entity: Search for and select the VM named SQL02.

Metrics: Since the issue is storage performance, search for and add these specific metrics:

Hypervisor IOPS (or Controller IOPS)

Hypervisor IO Latency (or Controller IO Latency)

Hypervisor IO Bandwidth

Click Save.

Save Session Data (Task 1.txt)

Open the "Monitor SQL02" session you just created.

(Per instructions): Right-click anywhere on the chart/data area -> Click Select All.

Copy the selected text (Ctrl+C).

Open Notepad on the provided desktop.

Paste the data.

Save the file as Task 1.txt on the Desktop.

Create and Schedule the Report

While still in the Analysis session, click the Create Report (or "Add to Report") button.

Report Name: MonitorSQL02

Report Settings:

Format: PDF

Frequency: Daily

Email Recipient: perf\_group@ACME.org

Retention: 0 (or "Do not retain", as requested).

Note: If the system forces you to create a new Report object and MonitorSQL02 is rejected, use monitorvm2 as the name per the instructions.

Save/Schedule the report.

Part 2: Diagnose and Fix the Issue

The Issue:

VM SQL02 was likely created with its data disks set to IDE or SATA.

Why this causes poor performance: IDE/SATA are emulated hardware with high CPU overhead and low queue depths (single-threaded).

The Standard: SQL01 (the healthy VM) is using SCSI, which is multithreaded and optimized for virtualization.

The Fix (Steps):

Navigate to the VM list in Prism.

Select SQL02 and click Update (or Edit).

Scroll down to the Disks section.

Identify the data disk(s). You will see the Bus Type listed as IDE or SATA.

Do not delete the VM. Instead, perform a disk conversion (destructive change to the disk is allowed, but we want to keep the data).

Method to Convert (Clone to SCSI):

Hover over the IDE/SATA disk to see the path/filename of the vDisk (or write it down).

Click Add New Disk.

Operation: select Clone from ADSF file.

Path: Browse to the storage container and select the file associated with the current IDE disk.

Bus Type: Select SCSI (This is the critical fix).

Index: Ensure it doesn't conflict with existing disks (usually index 1 or higher for data).

Click Add.

Once the new SCSI disk is added, find the original IDE/SATA disk and click the X to remove it.

Click Save.

Note: You do not need to power on the VM to verify. The change from IDE to SCSI allows the VM to use the Nutanix VirtIO drivers for maximum storage performance.

## NEW QUESTION # 14

Task 12

An administrator needs to create a report named VMs\_Power\_State that lists the VMs in the cluster and their basic details including the power state for the last month.

No other entities should be included in the report.

The report should run monthly and should send an email to admin@syberdyne.net when it runs.

Generate an instance of the report named VMs\_Power\_State as a CSV and save the zip file as

Desktop\Files\VMs\_Power\_state.zip Note: Make sure the report and zip file are named correctly. The SMTP server will not be configured.

**Answer:**

Explanation:

See the Explanation for step by step solution

Explanation:

To create a report named VMs\_Power\_State that lists the VMs in the cluster and their basic details including the power state for the last month, you can follow these steps:

Log in to Prism Central and click on Entities on the left menu.

Select Virtual Machines from the drop-down menu and click on Create Report.

Enter VMs\_Power\_State as the report name and a description if required. Click Next.

Under the Custom Views section, select Data Table. Click Next.

Under the Entity Type option, select VM. Click Next.

Under the Custom Columns option, add the following variables: Name, Cluster Name, vCPUs, Memory, Power State. Click Next.

Under the Time Period option, select Last Month. Click Next.

Under the Report Settings option, select Monthly from the Schedule drop-down menu. Enter admin@syberdyne.net as the Email Recipient. Select CSV as the Report Output Format. Click Next.

Review the report details and click Finish.

To generate an instance of the report named VMs\_Power\_State as a CSV and save the zip file as

Desktop\Files\VMs\_Power\_state.zip, you can follow these steps:

Log in to Prism Central and click on Operations on the left menu.

Select Reports from the drop-down menu and find the VMs\_Power\_State report from the list. Click on Run Now.

Wait for the report to be generated and click on Download Report. Save the file as Desktop\Files\VMs\_Power\_state.zip.

1. Open the Report section on Prism Central (Operations > Reports)
2. Click on the New Report button to start the creation of your custom report
3. Under the Custom Views section, select Data Table
4. Provide a title to your custom report, as well as a description if required.
5. Under the Entity Type option, select VM
6. This report can include all as well as a selection of the VMs
7. Click on the Custom Columns option and add the below variables:
  - a. Name - Name of the listed Virtual Machine
  - b. vCPUs - A combination of the vCores and vCPU's assigned to the Virtual Machine
  - c. Memory - Amount of memory assigned to the Virtual Machine
  - d. Disk Capacity - The total amount of assigned virtual disk capacity
  - e. Disk Usage - The total used virtual disk capacity
  - f. Snapshot Usage - The total amount of capacity used by snapshots (Excluding Protection Domain snapshots)
8. Under the Aggregation option for Memory and Disk Usage accept the default Average option

Custom

Column Name	Aggregation
Name	-
vCPUs	-
Memory	Average ▾
Disk Capacity	-
Disk Usage	Average ▾
Snapshot Usage	-

- 9. Click on the Add button to add this custom selection to your report
- 10. Next click on the Save and Run Now button on the bottom right of the screen
- 11. Provide the relevant details on this screen for your custom report:

Run Report

### NEW QUESTION # 15

#### Task 7

An administrator has environment that will soon be upgraded to 6.5. In the meantime, they need to implement log and apply a security policy named Staging\_Production, such that not VM in the Staging Environment can communicate with any VM in the production Environment, Configure the environment to satisfy this requirement.

Note: All other configurations not indicated must be left at their default values.

**Answer:**

Explanation:

See the Explanation for step by step solution

Explanation:

To configure the environment to satisfy the requirement of implementing a security policy named Staging\_Production, such that no VM in the Staging Environment can communicate with any VM in the production Environment, you need to do the following steps: Log in to Prism Central and go to Network > Security Policies > Create Security Policy. Enter Staging\_Production as the name of the security policy and select Cluster A as the cluster.

In the Scope section, select VMs as the entity type and add the VMs that belong to the Staging Environment and the Production Environment as the entities. You can use tags or categories to filter the VMs based on their environment.

In the Rules section, create a new rule with the following settings:

Direction: Bidirectional

Protocol: Any

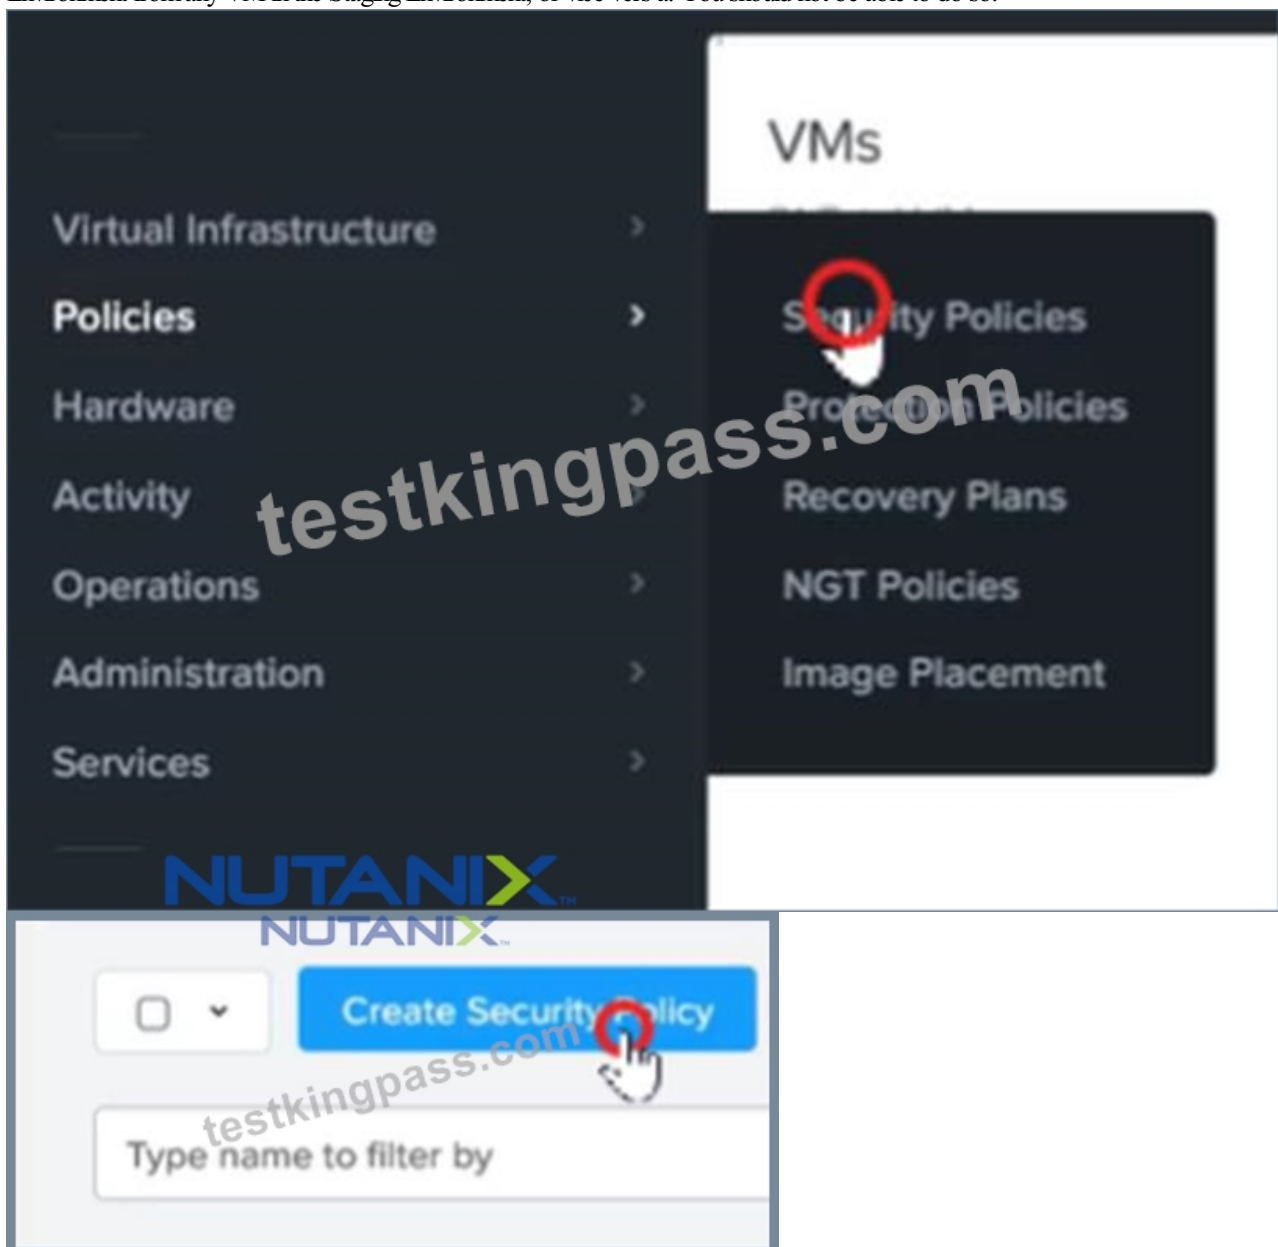

Source: Staging Environment

Destination: Production Environment

Action: Deny

Save the security policy and apply it to the cluster.

This will create a security policy that will block any traffic between the VMs in the Staging Environment and the VMs in the Production Environment. You can verify that the security policy is working by trying to ping or access any VM in the Production Environment from any VM in the Staging Environment, or vice versa. You should not be able to do so.

One row is selected, showing 'Staging\_Production' with the purpose 'Isolate HR from IT'. An 'Apply' action menu is open over the selected row, with options: Update, Apply (highlighted), Monitor, and Delete. A text box on the right says: 'To enforce the policy, check the box next to the policy, choose Actions, then Apply.'

### NEW QUESTION # 16

#### Task 5

An administrator has been informed that a new workload requires a logically segmented network to meet security requirements.

Network configuration:

VLAN: 667

Network: 192.168.0.0  
Subnet Mask: 255.255.255.0  
DNS server: 34.82.231.220  
Default Gateway: 192.168.0.1  
Domain: cyberdyne.net  
IP Pool: 192.168.9.100-200  
DHCP Server IP: 192.168.0.2

Configure the cluster to meet the requirements for the new workload if new objects are required, start the name with 667.

**Answer:**

**Explanation:**

See the Explanation for step by step solution

**Explanation:**

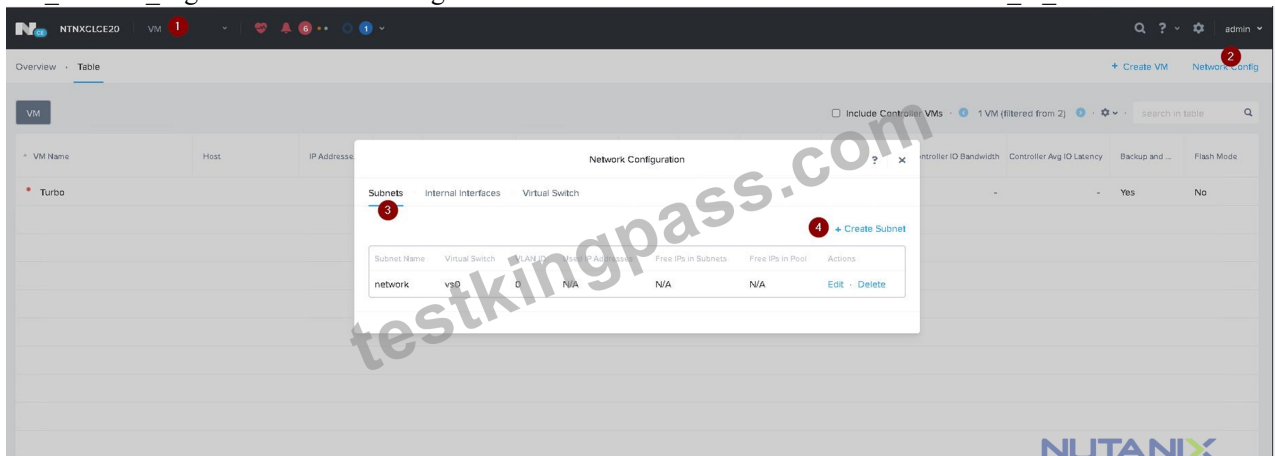

To configure the cluster to meet the requirements for the new workload, you need to do the following steps:

Create a new VLAN with ID 667 on the cluster. You can do this by logging in to Prism Element and going to Network Configuration > VLANs > Create VLAN. Enter 667 as the VLAN ID and a name for the VLAN, such as 667\_VLAN.

Create a new network segment with the network details provided. You can do this by logging in to Prism Central and going to Network > Network Segments > Create Network Segment. Enter a name for the network segment, such as 667\_Network\_Segment, and select 667\_VLAN as the VLAN. Enter 192.168.0.0 as the Network Address and 255.255.255.0 as the Subnet Mask. Enter 192.168.0.1 as the Default Gateway and 34.82.231.220 as the DNS Server. Enter cyberdyne.net as the Domain Name.

Create a new IP pool with the IP range provided. You can do this by logging in to Prism Central and going to Network > IP Pools > Create IP Pool. Enter a name for the IP pool, such as 667\_IP\_Pool, and select 667\_Network\_Segment as the Network Segment. Enter 192.168.9.100 as the Starting IP Address and 192.168.9.200 as the Ending IP Address.

Configure the DHCP server with the IP address provided. You can do this by logging in to Prism Central and going to Network > DHCP Servers > Create DHCP Server. Enter a name for the DHCP server, such as 667\_DHCP\_Server, and select 667\_Network\_Segment as the Network Segment. Enter 192.168.0.2 as the IP Address and select 667\_IP\_Pool as the IP Pool.
