NSK300 Valid Test Tutorial | 100% Pass | Latest Questions

NSK300 is the authentic study guides with the latest exam material which can help you solve all the difficulties in the actual test. Our NSK300 free demo is available for all of you. You will receive an email attached with the NSK300 training dumps within 5-10 minutes after completing purchase. Immediately download for the NSK300 study pdf is available for study with no time wasted. We have money refund policy to ensure your interest in case the failure of NSK300 actual test.

Netskope Certified Cloud Security Architect Sample Questions (Q46-Q51):

NEW QUESTION # 46

You want to integrate with a third-party DLP engine that requires ICAP. In this scenario, which Netskope platform component must be configured?

- A. Netskope Cloud Exchange
- B. On-Premises Log Parser (OPLP)
- C. Secure Forwarder
- D. Netskope Adapter

Answer: C

NEW QUESTION # 47

Users in your network are attempting to reach a website that has a self-signed certificate using a GRE tunnel to Netskope. They are currently being blocked by Netskope with an SSL error. How would you allow this traffic?

- A. Configure a Real-time Protection policy with the action set to Allow.
- B. Set the No SNI setting in Netskope to Bypass.
- **C. Configure a Do Not Decrypt SSL Decryption rule to allow traffic to pass.**
- D. Ensure that the users add the self-signed certificate to their local certificate store.

Answer: C

Explanation:

To allow traffic from a website with a self-signed certificate that is being blocked by Netskope with an SSL error, the correct action is to configure a Do Not Decrypt SSL Decryption rule. This rule will allow the traffic to pass without being decrypted, thus bypassing the SSL error caused by the self-signed certificate. This is a common practice for handling traffic from trusted internal applications or specific external sites that use self-signed certificates¹.

The Netskope Community Forum discusses the application of exceptions for sites with self-signed certificates and the use of SSL decryption policies to bypass the blocking¹. Additionally, the Netskope Knowledge Portal provides information on managing error settings and configuring SSL decryption rules².

NEW QUESTION # 48

What are three valid Instance Types for supported SaaS applications when using Netskope's API-enabled Protection? (Choose three.)

- **A. Quarantine**
- **B. DLP Scan**
- C. Behavior Analytics
- D. Forensic
- **E. API Data Protection**

Answer: A,B,E

Explanation:

When using Netskope's API-enabled Protection for supported SaaS applications, the valid instance types are:

API Data Protection (B): This type is used to connect to cloud apps using APIs to find sensitive content, enforce policy controls, and quarantine malware¹.

DLP Scan (D): This instance type involves scanning for data loss prevention, which is a key component of Netskope's API Data Protection¹.

Quarantine (E): This instance type allows for the isolation of potentially harmful or sensitive data until it can be reviewed or remediated¹.

Behavior Analytics and Forensic (A) are not listed as instance types for API-enabled Protection in the provided resources.

NEW QUESTION # 49

You are architecting a Netskope steering configuration for devices that are not owned by the organization. The users could be either on-premises or off-premises and the architecture requires that traffic destined to the company's instance of Microsoft 365 be steered to Netskope for inspection.

How would you achieve this scenario from a steering perspective?

- A. Use reverse proxy.
- **B. Use explicit proxy and the Netskope Client**
- C. Use IPsec and GRE tunnels.
- D. Use DPoP and Secure Forwarder

Answer: B

Explanation:

For devices not owned by the organization, using an explicit proxy along with the Netskope Client is the best approach to steer traffic for inspection. This method allows for granular control over the traffic, ensuring that only the traffic destined for the company's instance of Microsoft 365 is inspected by Netskope. The explicit proxy configuration can be applied regardless of whether the users are on-premises or off-premises, providing a consistent steering mechanism for all users.

NEW QUESTION # 50

What is a Fast Scan component of Netskope Threat Detection?

- A. Machine Learning
- B. Heuristic Analysis
- C. Static Analysis
- D. Dynamic Analysis

Answer: A

Explanation:

The Fast Scan component of Netskope Threat Detection utilizes Machine Learning to quickly detect and block malware in real-time. This is part of Netskope's multi-layered security approach, which includes various engines to defend against a wide range of threats. The Fast Scan capability specifically leverages machine learning-based detection for rapid analysis and response to potential threats.

NEW QUESTION # 51

.....

The APP online version of our NSK300 real quiz boosts no limits for the equipment being used and it supports any electronic equipment and the off-line use. So you can apply this version of our NSK300 exam questions on IPAD, phone and laptop just as you like. If only you open it in the environment with the network for the first time you can use our NSK300 Training Materials in the off-line condition later. You will find that APP online version is quite enjoyable to learn our study materials.
