**NEW QUESTION # 23**

An administrator is utilizing Citrix App Layering in an AHV cluster.

What must be included in the OS layer?

- A. Citrix VDA
- B. VMware Guest Tools
- **C. VirtIO Drivers**
- D. Nutanix Guest Tools

**Answer: C**

Explanation:

When creating the OS Layer for Citrix App Layering on Nutanix AHV, it is a strict requirement to include the Nutanix VirtIO Drivers.

The OS Layer is the foundational disk image used to generate the layered desktop. Because Nutanix AHV uses paravirtualized storage (SCSI) and network drivers for performance, the Windows OS within the layer must have the VirtIO drivers installed to successfully boot and communicate with the AHV hypervisor platform. Without these drivers in the OS layer, the resulting layered image will fail to boot on Nutanix infrastructure. (The Citrix VDA is typically placed in the Platform Layer or a separate App Layer, not strictly the OS layer).

**NEW QUESTION # 24**

An administrator is trying to add a Nutanix cluster as a new connection, but connection name Nutanix AHV is not listed in the Connection type menu.

What should the administrator do to resolve this issue?

- A. Install the Nutanix AHV plugin for Citrix on all Storefront.
- B. Install the Nutanix AHV plugin for Citrix Director on Storefront Servers.
- C. Install the Nutanix AHV plugin for Citrix Director on Delivery controllers.
- **D. Install the Nutanix AHV plugin for Citrix controllers.**

**Answer: D**

Explanation:

This is because this option will enable the administrator to add a Nutanix cluster as a new connection by installing and registering the plugin on the Delivery Controllers that manage the connection type menu.

- **B. When Prism Central resides in Xi Cloud**
- C. When Prism Central resides in NC2 Cloud on Azure
- D. When Prism Central resides in NC2 Cloud on AWS

**Answer: B**

Xi Cloud is a hybrid cloud platform that enables customers to run their applications and workloads on Nutanix infrastructure in public cloud environments such as AWS and Azure2.
