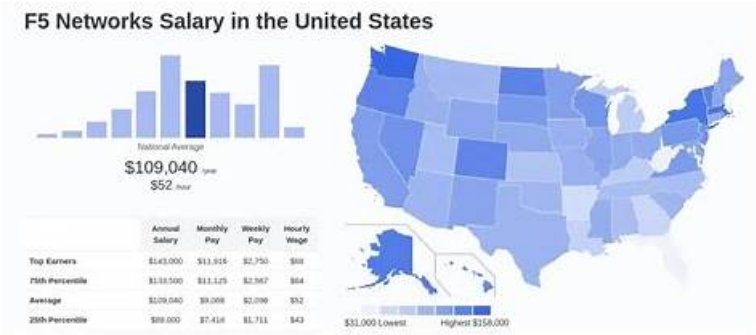
Practice F5CAB5 Mock | Practice F5CAB5 Test Engine



We often receive news feeds and what well-known entrepreneurs have done to young people. The achievements of these entrepreneurs are the goals we strive for and we must value their opinions. And you may don't know that they were also benefited from our F5CAB5 study braindumps. We have engaged in this career for over ten years and helped numerous enterpreneurs achieved their F5CAB5 certifications toward their success. Just buy our F5CAB5 learning materials and you will become a big man as them.

This challenge of F5CAB5 study quiz is something you do not need to be anxious with our practice materials. If you make choices on practice materials with untenable content, you may fail the exam with undesirable outcomes. Our F5CAB5 guide materials are totally to the contrary. Confronting obstacles or bottleneck during your process of reviewing, our F5CAB5 practice materials will fix all problems of the exam and increase your possibility of getting dream opportunities dramatically.

Practice F5 F5CAB5 Test Engine, F5CAB5 Latest Test Simulations

Now you need not be worried, if you are run short of time for F5CAB5 exam preparation or your tough work schedule doesn't allow you spare time for studying preparatory guides. Relying on TopExamCollection F5CAB5 Dumps will award an easy course to get through the exam and obtain a credential such as F5CAB5 you ever desired.

F5 BIG-IP Administration Support and Troubleshooting Sample Questions (Q50-Q55):

NEW QUESTION # 50
A BIG-IP Administrator makes a configuration change to the BIG-IP device. Which file logs the message regarding the configuration change?

- A. /var/log/user.log
- B. /var/log/audit
- C. /var/log/messages
- D. /var/log/secure

Answer: B

Explanation:
The BIG-IP system uses the audit log to track administrative actions and configuration changes.
* Audit Logging Functionality: When a user modifies the configuration via the Configuration Utility (GUI), the Traffic Management Shell (tmsh), or iControl, the system records the event in the audit log.
This includes the name of the user who made the change, the timestamp, and the specific command or object that was modified.
* Log Location: The audit log is stored at /var/log/audit.
* Evaluation of Other Options:
* /var/log/messages (Option A) contains general system and kernel messages but is not the primary source for configuration change details.
* /var/log/secure (Option B) primarily logs authentication and authorization attempts (logins and logouts).
* /var/log/user.log (Option D) is a generic Linux log file for user-level applications and does not track BIG-IP LTM configuration changes.

NEW QUESTION # 51
Refer to the exhibit.
A user with IP address 192.168.162.70 is unable to connect to an HTTP application. What is a possible cause within the Virtual Server configuration?

- A. The Source Address is configured as 10.128.10.0/24
- B. The Virtual Server is configured as a Standard Type
- C. The Destination Address is configured as 192.168.162.80
- D. The Service Port is configured as 0 *All Ports

Answer: A

Explanation:
The failure to connect is caused by a restrictive Source Address filter configured on the Virtual Server.
* Source Address Filtering: In the BIG-IP system, the Source Address field on a Virtual Server acts as an implicit Access Control List (ACL). Only traffic originating from a client IP address that matches the specified network range will be accepted and processed by the Virtual Server.
* Analyzing the Exhibit: The provided configuration for vs_http shows the Source Address is set to 10.128.10.0/24. This means the Virtual Server will only accept connections from the subnet ranging from 10.128.10.1 to 10.128.10.254.
* Identifying the Conflict: The user trying to connect has the IP address 192.168.162.70. Since 192.168.162.70 does not fall within the allowed 10.128.10.0/24 range, the BIG-IP system will not match this traffic to the Virtual Server, effectively blocking the connection attempt.
* Evaluation of Other Options:
* All Ports (Option A): Configuring a Virtual Server for "All Ports" (port 0) allows it to handle traffic for any destination port, which would not block a standard HTTP application.
* Destination Address (Option B): The destination address 192.168.162.80 is the Virtual IP (VIP) users should be connecting to; this is a standard configuration and not the cause of the failure for a user reaching out to it.
* Standard Type (Option C): A "Standard" Virtual Server is the most common type used for HTTP applications as it allows for Layer 7 profiles and full proxy capabilities.

NEW QUESTION # 52
A BIG-IP Administrator needs to collect HTTP status code and HTTP method for traffic flowing through a virtual server. Which default profile provides this information?

- A. Request Adapt
- B. HTTP
- C. Statistics
- D. Analytics

Answer: D

Explanation:
To gather granular Layer 7 data such as specific HTTP methods (GET, POST, etc.) and HTTP status codes (200, 404, 500), the BIG-IP system utilizes the Analytics (AVR) profile.
* Analytics Profile (Application Visibility and Reporting): While a standard HTTP profile tracks basic byte counts and requests, the Analytics profile is designed specifically to capture, analyze, and display detailed application performance metrics.
* Metrics Captured: When attached to a virtual server, it records URL-level statistics, response codes, page load times, and client-side metrics.
* Why not others? * HTTP Profile (Option A): This profile handles the parsing of HTTP traffic but does not provide a built-in reporting dashboard for status code distribution.
* Statistics Profile (Option C): This is a legacy profile used for custom user-defined counters and does not automatically categorize HTTP methods or status codes.
* Request Adapt (Option D): This is used for integrating with ICAP servers (like virus scanners) and does not perform traffic reporting.

NEW QUESTION # 53

A BIG-IP Administrator suspects that one of the BIG-IP device power supplies is experiencing power outages.
Which log file should the BIG-IP Administrator check to verify the suspicion? (Choose one answer)

- A. /var/log/daemon.log
- B. /var/log/kern.log
- C. /var/log/ltm
- D. /var/log/audit

Answer: C

Explanation:
According to official F5 documentation (K52015891 - Troubleshooting BIG-IP power supply issues), hardware-related alerts for power supplies, fans, and chassis components are logged in /var/log/ltm.
When a BIG-IP device experiences a power supply issue-such as failure, intermittent outages, or fan-related faults-the system generates alerts through internal platform monitoring services. These alerts are written to the /var/log/ltm file and often appear with messages similar to:
Chassis power supply 2 has experienced an issue. Status is as follows: FAN=bad; STATUS=bad.
This makes /var/log/ltm the authoritative log file for identifying and verifying power supply and chassis-related problems on BIG-IP systems.
The other log files are not appropriate for this purpose:
/var/log/daemon.log contains general daemon messages but is not the primary source for chassis hardware alerts.
/var/log/kern.log logs kernel-level events, not platform power status.
/var/log/audit records administrative actions and configuration changes.
Conclusion:
Per F5-supported guidance, when suspecting power supply outages or chassis hardware issues, the BIG-IP Administrator should always check /var/log/ltm first.

NEW QUESTION # 54
A BIG-IP Administrator notices that one of the servers that runs an application isNOTreceiving any traffic.
The BIG-IP Administrator examines the configuration status of the application and observes the displayed monitor configuration and affected pool member status.
What is the possible cause of this issue? (Choose one answer)

- A. HTTP 1.1 isNOTappropriate for monitoring purposes.
- B. The application isNOTresponding with the expected Receive String.
- C. The BIG-IP device isNOTable to reach the pool.
- D. The node health monitor isNOTresponding.

Answer: D

Explanation:
The key clue in the exhibit is the pool member's availability showing'Offline (Enabled) - Parent down". In BIG-IP terminology, a pool member inherits the status of itsparent node. If thenodeis marked down (for example, by a node-level monitor or a default "node is down" condition), thenall pool members using that node IPwill also be marked down and will not receive any traffic, even if the application service on the member port might be healthy.
While the HTTPS monitor configuration (send/receive strings) is displayed, the statusspecificallyindicates anode (parent) failure, not a service-level failure. If the problem were the application not matching the receive string, you would typically see the member down due to themember's monitorfailing (and the status would reflect monitor failure details), rather than "parent down." Option D is too broad; BIG-IP can generally reach the subnet (other servers work), and this symptom points to a specific node condition. Option C is incorrect because HTTP/1.1 is commonly used for monitoring and is valid when properly formatted (especially with a Host header). Therefore, the most likely cause is that thenode health monitor is not responding, causing the node-and consequently the member-to be marked down.

NEW QUESTION # 55
.....

In informative level, we should be more efficient. In order to take the initiative, we need to have a strong ability to support the job search. And how to get the test F5CAB5 certification in a short time, which determines enough F5CAB5 qualification certificates to test our learning ability and application level. Our F5CAB5 Exam Questions are specially designed to meet this demand for our

worthy customers. As long as you study with our F5CAB5 learning guide, you will pass the exam and get the certification for sure.

Practice F5CAB5 Test Engine: https://www.topexamcollection.com/F5CAB5-vce-collection.html

As a consequence you are able to keep pace with the changeable world and remain your advantages with our BIG-IP Administration Support and Troubleshooting F5CAB5 training materials, Read on to learn more about the top features of our F5CAB5 BIG-IP Administration Support and Troubleshooting PDF dumps file, desktop F5 F5CAB5 practice exam software, and a web-based F5CAB5 practice test, What's more, there is no limitation on our F5CAB5 software version about how many computers our customers used to download it, but it can only be operated under the Windows operation system.

They often eat into the testing time with schedule overruns, but even if they F5CAB5 allocate the full testing period, this slows things down, TweetDeck is a program that manages communications across multiple social networks.

Free PDF Quiz 2026 High Hit-Rate F5CAB5: Practice BIG-IP Administration Support and Troubleshooting Mock

As a consequence you are able to keep pace with the changeable world and remain your advantages with our BIG-IP Administration Support and Troubleshooting F5CAB5 Training Materials, Read on to learn more about the top features of our F5CAB5 BIG-IP Administration Support and Troubleshooting PDF dumps file, desktop F5 F5CAB5 practice exam software, and a web-based F5CAB5 practice test.

What's more, there is no limitation on our F5CAB5 software version about how many computers our customers used to download it, but it can only be operated under the Windows operation system.

In addition, the refund process is very simple and will not bring you any trouble, For that, we spent many years on researches of developing effective F5CAB5 practice test and made it become the best auxiliary tool for the preparation.
