100-160 Valid Test Review - 100-160 Valid Dumps Questions

Achieving a good score on the Cisco 100-160 exam on the first attempt is a common goal for many candidates. However, some believe that studying good Cisco Certified Support Technician (CCST) Cybersecurity (100-160) materials isn't necessary. This notion, however, is far from true. The right preparation material for the 100-160 Exam is critical for success, and failing to find the most up-to-date Cisco 100-160 materials can lead to a wasted effort and expense.

Cisco Certified Support Technician (CCST) Cybersecurity Sample Questions (Q33-Q38):

NEW QUESTION # 33

Which of the following statements about multi-factor authentication (MFA) is correct?

- A. MFA is a security measure that requires users to provide only one form of identification to gain access to a system or application
- **B. MFA is a security measure that requires users to provide two or more forms of identification to gain access to a system or application.**
- C. MFA is a security measure that only applies to physical access control systems.
- D. MFA is a security measure that is no longer recommended due to its complexity and potential for user errors.

Answer: B

Explanation:

Option 1: This is the correct statement. MFA is a security measure that requires users to provide two or more forms of identification to gain access to a system or application. It adds an extra layer of security by combining multiple credentials, such as passwords, one-time passcodes, biometrics, or smart cards, to verify a user's identity.

Option 2: This statement is incorrect. MFA requires users to provide two or more forms of identification, not just one.

Option 3: This statement is incorrect. MFA is still recommended as an effective security measure and is widely used in many industries.

Option 4: This statement is incorrect. MFA can be used for both physical and logical access control systems.

NEW QUESTION # 34

Which of the following is a key advantage of multifactor authentication?

- A. It eliminates the need for strong passwords.
- **B. It provides enhanced security by requiring multiple proofs of identity.**
- C. It allows for anonymous access to systems and resources.
- D. It simplifies the authentication process.

Answer: B

Explanation:

Multifactor authentication enhances security by requiring users to present multiple proofs of identity. By combining different factors, such as something you know, something you have, or something you are, it becomes more difficult for unauthorized individuals to gain access. This approach adds an extra layer of protection compared to relying solely on a username and password combination.

NEW QUESTION # 35

What is meant by the term "collective intelligence" in the context of cybersecurity?

- A. Intelligence gathered by individuals or organizations without sharing it with others.
- B. Intelligence collected through automated threat intelligence platforms.
- C. Intelligence gathered from publicly available sources.
- **D. Intelligence collected through collaboration and information sharing among individuals or organizations.**

Answer: D

Explanation:

Collective intelligence refers to the practice of pooling knowledge, insights, and resources from multiple individuals or organizations to enhance cybersecurity. It involves collaboration, information sharing, and coordinated efforts to identify and mitigate threats collectively. By leveraging the collective intelligence, cybersecurity practitioners can gain a broader view of the threat landscape, share threat intelligence, and develop effective strategies to combat cyber threats.

NEW QUESTION # 36

Which security technology uses an agent-based approach to protect endpoints and is designed to detect and prevent malicious activities?

- A. Advanced Malware Protection (AMP)
- B. Data Loss Prevention (DLP)
- C. Intrusion Prevention System (IPS)
- D. Firewall

Answer: A

Explanation:

Option 1: Incorrect. A firewall is a network security device that monitors and filters incoming and outgoing network traffic based on predetermined security rules.

Option 2: Incorrect. An Intrusion Prevention System (IPS) is a network security device that monitors network traffic and is designed to detect and prevent unauthorized access and malicious activities.

Option 3: Incorrect. Data Loss Prevention (DLP) is a security technology that prevents sensitive data from being lost, stolen, or inadvertently leaked.

Option 4: Correct. Advanced Malware Protection (AMP) uses an agent-based approach to protect endpoints and detect and prevent known and unknown malicious activities. It includes features such as file reputation analysis, sandboxing, and behavior-based malware detection.

NEW QUESTION # 37

Which of the following is a principle of data security?

- A. Data Masking
- B. Intrusion Detection System
- C. Firewall
- D. Encryption

Answer: D

Explanation:

Option 1: Correct. Encryption is a principle of data security that involves converting data into a form that is unreadable by unauthorized users. This helps protect the confidentiality of data.

Option 2: Incorrect. A firewall is a network security device that monitors and filters incoming and outgoing network traffic based on predetermined security rules. While it plays a role in data security, it is not a principle of data security.

Option 3: Incorrect. An Intrusion Detection System (IDS) is a device or software application that monitors network or system activities for malicious activities or policy violations and produces reports. While it plays a role in data security, it is not a principle of data security.

Option 4: Incorrect. Data masking is a technique that replaces sensitive data with fictitious data to protect the privacy of data. While it plays a role in data security, it is not a principle of data security.

NEW QUESTION # 38

.....

We did not gain our high appraisal by our 100-160 exam practice for nothing and there is no question that our 100-160 practice materials will be your perfect choice. First, you can see the high hit rate on the website that can straightly proved our 100-160 study braindumps are famous all over the world. Secondly, you can free download the demos to check the quality, and you will be surprised to find we have a high pass rate as 98% to 100%.
