## Cisco Securing Networks with Cisco Firepower Sample Questions (Q77-Q82):

### NEW QUESTION # 77

An administrator must use Cisco FMC to install a backup route within the Cisco FTD to route traffic in case of a routing failure with the primary route. Which action accomplishes this task?

- A. Configure EIGRP routing on the FMC to ensure that dynamic routes are always updated.
- B. Use a default route on the FMC instead of having multiple routes contending for priority.
- C. Create the backup route and use route tracking on both routes to a destination IP address in the network.
- D. Install the static backup route and modify the metric to be less than the primary route.

**Answer: C**

### NEW QUESTION # 78

An engineer needs to configure remote storage on Cisco FMC. Configuration backups must be available from a secure location on the network for disaster recovery. Reports need to back up to a shared location that auditors can access with their Active Directory logins. Which strategy must the engineer use to meet these objectives?

- A. Use NFS for both backups and reports.
- **B. Use SMB for both backups and reports.**
- C. Use SMB for backups and NFS for reports.
- D. Use SSH for backups and NFS for reports.

**Answer: B**

Explanation:

"You cannot send backups to one remote system and reports to another, but you can choose to send either to a remote system and store the other on the Firepower Management Center."

#### NEW QUESTION # 79

An engineer is integrating Cisco Secure Endpoint with Cisco Secure Firewall Management Center in high availability mode. Malware events detected by Secure Endpoint must also be received by Secure Firewall Management Center and public cloud services are used. Which two configurations must be selected on both high availability peers independently? (Choose two.)

- A. security group tag
- **B. internet connection**
- **C. Secure Endpoint Cloud Connection**
- D. Cisco Success Network
- E. Smart Software Manager Satellite

**Answer: B,C**

#### NEW QUESTION # 80

An organization has a compliancy requirement to protect servers from clients, however, the clients and servers all reside on the same Layer 3 network. Without readdressing IP subnets for clients or servers, how is segmentation achieved?

- A. Change the IP addresses of the servers, while remaining on the same subnet
- B. Deploy a firewall in routed mode between the clients and servers
- **C. Deploy a firewall in transparent mode between the clients and servers.**
- D. Change the IP addresses of the clients, while remaining on the same subnet.

**Answer: C**

#### NEW QUESTION # 81

An organization has a Cisco IPS running in inline mode and is inspecting traffic for malicious activity. When traffic is received by the Cisco IRS, if it is not dropped, how does the traffic get to its destination?

- **A. It is routed back to the Cisco ASA interfaces for transmission.**
- B. It is retransmitted from the Cisco IPS inline set.
- C. The packets are duplicated and a copy is sent to the destination.
- D. It is transmitted out of the Cisco IPS outside interface.

**Answer: A**

#### NEW QUESTION # 82

.....
